The Active Army Supplement for The Environmental Assessment and Management (TEAM) Guide

The number of environmental laws and regulations have continued to grow in the United States, making compliance with these regulations increasingly difficult. Environmental assessments became a way to determine operational consistency and compliance with current environmental regulations.

Beginning in 1985, the U.S. Army Construction Engineering Research Laboratories (USACERL), in cooperation with the U.S. Army Environmental Center (USAEC), began the research that led to the publication of the Environmental Compliance Assessment System (ECAS). In fiscal year 1994, the U.S. Army became a participant in the efforts to create a single compliance assessment manual for use by all members of the DOD. The resultant manual is The Environmental Assessment and Management (TEAM) Guide. In order to examine Army Regulations (ARs), the Active Army supplement was developed to use in conjunction with the TEAM Guide.

FOREWORD

The research was performed for the Army under Military Interdepartmental Purchase Request (MIPR) number 2095. The technical monitor was Bob Shakeshaft, SFIM-AEC-ECP.

The research was performed by the Environmental Compliance Modeling and Systems Division (EC) of the U.S. Army Construction Engineering Research Laboratories (USACERL). The Principal Investigator was Donna J. Schell, Environmental Protocol Team, CECER-ECP. Dr. Diane K. Mann, CECER-ECP is Acting Team Leader. Dr. John T. Bandy is Acting Chief, CECER-EC, and William D. Goran is Acting Chief, CECER-EL.

LTC David J. Rehbein is Commander and Acting Director, USACERL, and Dr. Michael J. O'Connor is Technical Director.

INTRODUCTION

This manual supplements The Environmental Assessment and Management (TEAM) Guide. Specifically, this supplement:

1. compiles applicable Army and DOD regulations
2. synthesizes environmental regulations, management practices (MPs), and risk management issues into consistent and easy-to-use checklists
3. serves as an aid in the assessment process and management action development phases of Environmental Compliance Assessment System (ECAS).

The information in this supplement applies to all Active Army installations and facilities in the United States and its territories. Army Regulation (AR) 200-1 was being revised at the time this supplement was being prepared. No changes to Army policy proposed by this rewrite have been included in the supplement. After final publication of the new AR, this supplement will be updated.

Any changes or suggestions for improving this supplement should be forwarded to USAEC (SFIM-AEC-ECP), Aberdeen Proving Ground, MD, 21010-5401, fax number 410-671-1675.

The contents of this supplement are up-to-date as of 15 February 1995.

ENVIRONMENTAL COMPLIANCE ASSESSMENT PROCESS

The environmental assessment process can be divided into four distinct phases:

1. preassessment phase
2. site assessment phase
3. post-assessment phase
4. implementation phase.

Pre-Assessment Phase - Five key activities should be completed before an assessment team begins the assessment activities.

1. **Previsit Questionnaire.** The purpose of the previsit questionnaire is to collect information that will familiarize the assessment team with the facility and its operations so they are able to review the applicable regulations and prepare a detailed assessment schedule. A copy of the most recent previsit questionnaire may be obtained from AEC.
2. **Define Assessment Scope and Team Responsibilities.** The installation or Major Army Command (MACOM) may wish to place special emphasis on certain sections or to review additional areas not covered in the manual. These goals must be stated early so the assessment can be planned properly. Additionally, the duration of the assessment and handling of tenants and/or offpost sites must be addressed. Finally, responsibilities for each of the sections must be assigned to team members as appropriate.
3. **Review Relevant Regulations.** Once the assessment scope and responsibilities are known, the assessors should undertake a thorough review of relevant Federal, state, and local regulations affecting the facility as well as reviewing this Supplement and the TEAM Guide. The applicable environmental regulations must be determined before assessment begins. If not already

available, checklist items for state and local requirements should be added to the checklists in the TEAM Guide. See page xviii for a correlation of major Army activities and applicable guide and Supplement sections.

4. **Develop Assessment Schedule.** The team should develop a detailed assessment schedule that includes the activities planned for each day.
5. **Review Protocol or Checklist Sections.** Each assessor should know the regulatory requirements, schedule, and be familiar with the assessment checklists that will be used.

Onsite Assessment Activities - A general description of onsite activities is given below. Some details of this may vary depending on installation and MACOM desires.

1. **Installation In-brief.** A formal in-briefing is usually held the first day of the assessment. The team leader briefs the Installation Commander, environmental staff, the Environmental Quality Control Committee (EQCC), MACOM representatives, and other interested personnel on ECAS goals and activities. Other key activities are to introduce the assessment team, outline the assessment schedule, and address any concerns the Commander may have.
2. **Conduct Assessment.** The team evaluates a sample of installation operations with impacts on the environment. The duration of the site assessment ranges from 1 day to 2 weeks, depending on the size and the number of activities at the installation. The assessment team reviews the paperwork (e.g., permits, plans) interviews relevant installation staff, and walks the installation facilities to observe the operations. Observations are compared with standards in the checklists (missing standards are added to the checklists) and deficiencies are written as findings.
3. **Write Finding Sheets.** The team prepares finding sheets with recommended corrective actions when compliance deficiencies are observed. The team leader performs the quality assurance on the finding sheets. Findings may be written on the findings sheet shown in Figure 1 (see page ix) or, at the discretion of the team leader, directly in the ECAS Software. The finding sheet requests the same information as the software.
4. **Daily Outbriefing.** This is a daily meeting between the team and the installation to present the preliminary findings and get feedback on other areas to be looked at. These daily meetings are important to validate findings while the team is in the field and help resolve any differences that may occur.
5. **Exit Briefing.** The formal exit briefing is held at the close of the field work and normally given to the Installation Commander and the EQCC.

Post-Assessment Phase - Key activities in this phase are detailed findings review by the installation and report preparation by the assessment team. The details of the report flow may vary by MACOM, but in all cases the team will continue to support the installation with developing corrective actions for findings, as requested. The phase concludes with submission of the Environmental Compliance Assessment Report (ECAR) to the MACOM.

Implementation Phase - During this phase, installations implement corrective actions and follow-up on the compliance deficiencies to ensure they are eliminated. Many MACOMs are requiring an Installation Corrective Action Plan (ICAP) to maintain a funding strategy and track corrective action progress. This phase is ongoing and installations may add findings to their ICAP at any time.

ORGANIZATION OF THE ACTIVE ARMY SUPPLEMENT

Installations engage in many operations and activities that can cause environmental impacts on public health and the environment if not controlled or properly managed. Many of these activities and operations are regulated by Federal, state, and local regulations, and by Army regulations/policies. After a review of these activities at installations it is apparent that there are major categories of environmental compliance into which most environmental regulations and Army activities could be grouped. This supplement and the TEAM Guide is divided into the following 13 sections that correspond to major compliance categories:

1. Air Emissions Management
2. Cultural Resources Management
3. Hazardous Materials Management
4. Hazardous Waste Management
5. Natural Resource Management
6. Other Environmental Issues
(NEPA, environmental noise, IRP, pollution prevention, program management)
7. Pesticide Management
8. Petroleum, Oil, and Lubricant (POL) Management
9. Solid Waste Management
10. Toxic Substances Management (includes asbestos, PCBs, radon, and lead-based paint)
11. Storage Tank Management
12. Wastewater Management
13. Water Quality Management.

Each section is organized in the following format:

- A. **Army Regulations (ARs) and Policies.** This section identifies the ARs and Army policies that apply to the compliance area.
- B. **Department of Defense (DOD) Directives and Instructions.** This section identifies, in summary form, the key DOD directives and Instructions not yet implemented/superseded by an AR that apply to this compliance category.
- C. **Using the TEAM Guide for ECAS.** This section provides the specifics of how this compliance category in the TEAM Guide will be assessed during ECAS.
- D. **Key Army/DOD Compliance Requirements.** This section summarizes the significant compliance requirements associated with the regulations included in this Supplement. It is a brief abstract summarizing the overall thrust of the regulations for that particular compliance category.
- E. **Key Compliance Personnel.** This section identifies the significant compliance personnel on an installation that are responsible for the requirements outlined in the TEAM Guide and this Supplement.
- F. **Key Army/DOD Compliance Definitions.** This section presents definitions taken from ARs and DOD Directives or Instructions for those key terms associated with each compliance category not already defined by Federal regulations in TEAM Guide.

- G. Records To Review in Addition To Those Listed in TEAM Guide.** This section is a list of records that are specific to Army issues that need to be reviewed in addition to the records listed in TEAM Guide.
- H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide.** This is a list of physical features that are specific to the Army that need to be inspected in addition to the physical features listed in TEAM Guide.
- I. People To Interview.** A list of Army personnel to interview in order to resolve compliance issues related to the requirements discussed in the section.
- J. Compliance Assessment Checklists.** The final portion of each section and its tables contain checklists composed of requirements or guidelines that serve as indicators to point out possible compliance problems, as well as practices, conditions, and situations that could indicate potential problems. They are intended to focus attention on the key compliance questions and issues that should be investigated. Instructions are provided to direct the assessor to the appropriate action, references, or activity that corresponds to the specific requirement or guide.

USING THE ACTIVE ARMY SUPPLEMENT CHECKLISTS

- **Checklist Item Numbering.** The checklist items are each assigned a four part code. The first part of the code indicates the section the checklist item is in (i.e., SO for Solid Waste Management, HW for Hazardous Waste Management). The second part of the code indicates the topic within the section. For example in Solid Waste Management, the first topic is All Installations (SO.1). This second part matches the numbering system used in TEAM Guide and the State Supplements. The third part is a number which indicates the placement of the checklist item within the topic. These checklist item numbers will be kept static from this year to next year. The fourth place indicates the TEAM supplement in which the checklist item is found. The fourth part will be "A" (Active Army) for all items in this supplement. The fourth part in state supplements will be the state postal code, e.g., MD for Maryland.

Topics, in the Active Army or other component supplements, which do not fit in established TEAM topics are placed in a standard topic, Miscellaneous Requirements. This is a standard subsection number 4 in all TEAM sections (e.g., A.4, HW.4, and SO.4).

- **Standard Checklist Items.** The first two checklist items in each section of the supplement are standardized. The first item suggests a list of documents that should be kept on file at the installation. The second item provides for a review of management issues related to the section.
- **Inserting and Deleting Pages.** Each section in the supplement is structured so that, where it is complimentary to checklist items in TEAM Guide, it can be inserted.
- **Missing Checklist Items in TEAM Guide and Supplements (including regulatory and management practice findings).** If you identify a missing requirement in the TEAM Guide or any of its supplements, you should write your own criteria for the left hand column (Regulatory Requirement column) of the checklist and assign it a code using the following pattern: section code.2.your assigned number.supplement code. A standard subsection, or topic, has been established in all sections for missing requirements. Some examples are as follows:
 1. A missing requirement from an Army Regulation in solid waste should be coded SO.2.1.A.
 2. A missing solid waste requirement in a Colorado state supplement would be coded SO.2.1.CO.
 3. The third missing Federal requirement that you find in solid waste would be coded SO.2.3. (no supplement code because it is a Federal TEAM Guide finding.

Missing requirements will be validated at AEC and provided to USACERL to put in the next annual update to the TEAM Guide or supplement. We also plan to place these changes on DENIX at more frequent intervals. Provide copies of all criteria that you add to your team leader, your headquarters, and USAEC.

- **Standard Topics in All Sections.** The following topics (second part of the checklist item code) will be found in all TEAM Guide manual sections:
 1. All Installations: these checklist items are general in nature and apply to all installations.
 2. Missing Requirements: the assessor assigns a code in this subsection for any missing requirement.

3. **State and Local Requirements:** this subsection is only used when the state checklist is not organized in the standard TEAM sections and topics (e.g., when an old ECAS 17 section state protocol is used).
 4. **Miscellaneous Requirements:** this is used only for supplement checklist items, or topics, which do match established TEAM Guide topics.
- **ECAS Software.** The ECAS software is used to prepare the ECAS findings and corrective actions. The software creates a database which is used to prepare ECAS reports to provide the installation a means to followup and manage corrective actions and provide USAEC a means to combine data to use for trend analysis.

The software allows the user to retrieve the text of the regulatory requirement (or criteria) from the TEAM Guide or supplements based on the four part code described above. The TEAM and component supplements (Active, Guard, Reserve) are included in the software. The state protocols are available from USAEC on diskette to add to your ECAS software. Diskettes for all 50 states should be available by the end of 1996.

Training classes are provided for ECAS Software during ECAS training sessions scheduled four times a year and/or on an as-needed basis. Please forward any requests for training to USAEC, ATTN: SFIM-AEC-ECP.

GLOSSARY OF ACTIVE ARMY ACRONYMS

AAFES	Army/Air Force Exchange Service
AASF	Army Aviation Support Facility
ACTS	Army Compliance Tracking System
AMSA	Area Maintenance Support Activities
AR	Army Regulations
ARM	Armory
ARNG	Army National Guard
ARRP	Army Radon Reduction Program
AVCRD	Aviation Classification Repair Activity Depot
AWP	Annual Work Plan
CHEMTREC	Chemical Transportation Emergency Center
CMPA	Compliance Agreement
COE	Corps of Engineers
CONUS	continental U.S.
CPO	Civilian Personnel Office
CSMS	Combined Support Maintenance Shop
CX	Categorical exclusion
DASA	Deputy Assistant Secretary of the Army

DERA	Defense Environmental Restoration Account
DLA	Defense Logistics Agency
DOC	Directorate of Contracting
DODD	Department of Defense Directive
DODI	Department of Defense Instruction
DODR	Department of Defense Regulation
DOE	Department of Energy
DOL	Directorate of Logistics
DPW	Directorate of Public Works
DPCA	Directorate of Personnel and Community Activities
DPTM	Directorate of Plans, Training, and Mobilization
DRM	Director of Resource Management
DRMO	Defense Reutilization and Marketing Organization
DRMS	Defense Reutilization and Marketing Service
DSH	Directorate of Safety and Health
EC	Environmental Coordinator

ECAS	Environmental Compliance Assessment System
EQCC	Environmental Quality Control Committee
ESDP	established standard, deadline passed
ESMP	Endangered Species Management Plan
ESOH	Environmental Safety and Occupational Health
FEIS	final environmental impact statement
FS	feasibility study
GIS	Geographic Information System
GOCO	government owned, contractor operated
GSA	General Service Administration
HPP	Historic Preservation Plan
HQDA	Headquarters, Department of the Army
IAG	interagency agreement
IAW	in accordance with
IC	Installation Commander
ICUZ	Incompatible Use Zone
IHWMP	Installation Hazardous Waste Management Plan
INO	inspection/notice of violation
INRMP	Installation Natural Resources Management Plan
IOSC	Installation On-Scene Coordinator
IPMP	Installation Pesticide Management Plan
ISCP	Installations Spill Contingency Plan
ITAM	integrated training area management
LCC	Logistics Control Center
LCED	life cycle environmental document
LFM	liquid fuels maintenance
LLA	lowest living area
LTA	Local Training Area
LTM	long term measurement
MAFI	MWR activities and nonappropriated funds instrumentalities
MATES	Mobilization and Training Equipment Site
MEDCEN	medical center
MEDDAC	Medical Department activity
METL	mission essential task list
MTA	major training area
MWR	Morale, Welfare, and Recreation
NMFS	National Marines Fisheries Service
NSN	National Stock Number

OCPA	Office of the Chief of Public Affairs
OMS	Organizational Maintenance Shop
PA	preliminary assessment
PAS	preliminary assessment screening
PAO	Public Affairs Office
PDEIS	preliminary draft environmental impact statement
PMC	pest management consultant
PMO	preventive medicine officer
PPBES	Programming, Planning, Budget, Execution System
PVNTMED	Preventative Medicine
QAE	quality assurance evaluation
QWRP	qualifying waste recycling program
RA	remedial action
REC	record of environmental consideration
RI	remedial investigation
ROD	record of decision
RPM	remedial project manager
RPMA	real property maintenance activities
SEP	supplemental environmental project
SI	site investigation
SJA	Staff Judge Advocate
SMUs	Solid Waste Management Units
SRT	spill response team
STAARC/HQ	State Area Command/Headquarters
TJAG	The Judge Advocate General
TRC	Technical Review Committee
UFR	Unfinanced Requirements Report
USAEC	U.S. Army Environmental Center
USAF	U.S. Air Force
USCG	U.S. Coast Guard
USPFO	United States Property and Fiscal Office
UTES	Unit Training Equipment Site
WETS	weekend training sites

SECTION 1

AIR EMISSIONS MANAGEMENT

A. U.S. Army Regulations (ARs) and Policies

- AR 200-1, *Environmental Protection and Enhancement*. Chapter 4 of this AR, dated 23 May 1990, sets forth policy and procedures for controlling pollution emissions into the air. This regulation mandates compliance with all applicable Federal, state, and local regulations concerning air quality, including State Implementation Programs (SIP).

B. Department of Defense (DOD) Directives and Instructions

- DOD Directive (DODD) 6050.9, *Chlorofluorocarbons (CFCs) and Halons*. This directive, dated 13 February 1989, establishes policies for documenting the procurement of CFCs and halons.

C. Using the TEAM Guide for ECAS

- Special emphasis should be placed on evaluating Army/Air Force Exchange Service (AAFES) garages and auto hobby shops for compliance with the CFC and halon requirements.
- When conducting the assessment, use Appendix 1-1 in this Supplement to help the installation identify regulated toxic substances at the installation with threshold quantities for accidental release prevention under 40 CFR 68.130.
- Additionally, Appendix 1-2 provides a list of emissions sources and their projected dates of regulation.

D. Key Army/DOD Compliance Requirements

- Emissions Inventories - The Installation Commander is responsible for the conduct and maintenance of an up-to-date emissions inventory listing all stationary sources of air pollution and inspect stationary air pollution sources periodically.
- Fuel Burning Equipment - All fuel burning facilities will be equipped with air pollution abatement equipment or will use the type of fuel necessary to achieve environmental pollution abatement.
- CFCs and Halons - Installations are required to track the procurement of CFCs and halons.

E. Key Compliance Personnel

- The Installation Commander (IC). The IC is responsible for compliance with air pollution laws and regulations and is the appropriate signatory for all permits.
- The Directorate of Public Works (DPW). The DPW is responsible for the maintenance of incinerators, fuel handling, and storage equipment, as well as the operation and maintenance of all fuel burners. The heating/boiler plant fuel burners are the responsibility of the Operations and Maintenance Division.

- The Environmental Coordinator (EC). The EC is responsible for the preparation of all air pollution emission source permit applications, CFC management, emissions inventories, and emissions monitoring.
- The Hospital or Installation Clinic. These medical services are responsible for the operation of any medical/pathological incinerators located in their facilities.
- The Fuels Management Branch of the Directorate of Logistics (DOL). This branch is responsible for the operation of all fuel handling, transportation (tanks and/or pipelines), and storage facilities on the installation. The branch is also responsible for ensuring that all fuels satisfy specifications, including state mandated sulfur content. The branch is also responsible for the operation of the military service stations that dispenses leaded or unleaded fuel.
- The Vehicle Maintenance Branch of the DOL. This branch is responsible for the emission testing and vehicle maintenance required by state and Army regulations.
- Maintenance Facilities. The various maintenance facilities at the installation are responsible for the operation of degreasers and other industrial processes that are regulated or may require an operating permit.
- AAFES. AAFES operates service stations that dispenses fuel for passenger vehicles and other light duty vehicles. These stations are subject to Federal, state, and local requirements for control of air pollution emissions from fuel storage and dispensing operations, and vehicle maintenance activities.
- The Environmental Management Division of the DPW. This division is responsible for monitoring the ambient air quality and preparing the installation air emissions inventory.

F. Key Army/DOD Compliance Definitions

- *Emission Standards* - limits on the quantity of emissions that may be discharged to the atmosphere from any regulated source, established by Federal, state, local, and host nation authorities (AR 200-1, Glossary, Section II).

G. Records To Review in Addition to Those Listed in TEAM Guide

- Emissions inventory
- Plans and procedures applicable to air pollution control
- Quarterly summary of CFC and halon procurement

H. Physical Features To Inspect in Addition to Those Listed in TEAM Guide

- AAFES Service Stations
- Auto Hobby Shops

I. People To Interview

- Directorate of Public Works (DPW)
- Environmental Coordinator (EC)
- Preventive Medicine
- Fuel Management Branch of DOL
- Vehicle Maintenance

REQUIREMENTS:**

**REVIEWER CHECKS:
May 1995**

A.1.3.A. Preventive Medicine personnel at each installation are required to conduct and maintain an up-to-date emissions inventory listing all stationary sources of air pollution and inspect stationary air pollution sources periodically to assess compliance with applicable standards (AR 40-5, para 11-4b and 200-1, para 1-25c(1)).

- Determine whether an emissions inventory has been completed or updated recently.
- Examine the emissions inventory for completeness and compare the inventory to any permits issued to ensure all recent changes/modifications have been included.
- Verify that periodic updates of the air emissions inventory are conducted.
- Verify that Preventive Medicine personnel inspect stationary air sources periodically to assess compliance.
- Determine if all sources of contaminants are accounted for by comparing the site inventory with knowledge gained from a site tour and field work.
- Verify that the listing includes an inventory of VOCs and hazardous air pollutants.

COMPLIANCE CATEGORY:
AIR EMISSIONS MANAGEMENT
U.S. TEAM Guide: Active Army Supplement

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: May 1995
<p>CFCs AND HALONS</p> <p>A.85 Purchasing/ Procurement</p> <p>A.85.1.A. Installations that procure and store CFCs and halons for mission critical applications when substitutes are not available, or use them to service equipment, are required to produce a quarterly summary of CFC and halon procurement so that the Army can submit the annual CFC and Halon Report to the Assistant Secretary of Defense (DODD 6050.9, para E3(f)).</p>	<p>Determine if the summary of CFC and halon procurement has been completed.</p> <p>Verify that the form indicates the following:</p> <ul style="list-style-type: none"> - aggregate procurement (by 1000 lb) of CFCs and halons for which they are the integrated item manager - data on significant noncentralized CFC and halon procurement. <p>Verify that, in areas where CFCs and halons are used or stored, the following is being done:</p> <ul style="list-style-type: none"> - dependences on CFCs and halons is reduced - emissions are being minimized - conservation practices have been implemented. <p>Verify that procurement data is gathered quarterly.</p>

Appendix 1-1

List of Regulated Toxic Substances and Threshold Quantities for Accidental Release Prevention (40 CFR 68.130, Table 1)

Chemical name	CAS No.	Threshold quantity (lb)	Basis for listing
Acrolein [2-Propenal]	107-02-8	5000	b
Acrylonitrile [2-Propenenitrile]	107-13-1	20,000	b
Acrylyl chloride [2-Propenoyl chloride]	814-68-6	5000	b
Allyl alcohol [2-Propen-1-ol]	107-18-61	15,000	b
Allylamine [2-Propen-1-amine]	107-11-9	10,000	b
Ammonia (anhydrous)	7664-41-7	10,000	a,b
Ammonia (conc 20% or greater)	7664-41-7	20,000	a,b
Arsenous trichloride	7784-34-1	15,000	b
Arsine	7784-42-1	1000	b
Boron trichloride [Borane, trichloro-]	10294-34-5	5000	b
Boron trifluoride [Borane, trifluoro-]	7637-07-2	5000	b
Boron trifluoride compound with methyl ether (1:1) [Boron, trifluoro[oxybis[metane]]-, T-4-	353-42-4	15,000	b
Bromine	7726-95-6	10,000	a,b
Carbon disulfide	75-15-0	20,000	b
Chlorine	7782-50-5	2500	a,b
Chlorine dioxide [Chlorine oxide (ClO ₂)]	10049-04-4	1000	c
Chloroform [Methane, trichloro-]	67-66-3	20,000	b
Chloromethyl ether [Methane, oxybis[chloro-]	542-88-1	1000	b
Chloromethyl methyl ether [Methane, chloromethoxy-]	107-30-2	5000	b
Crotonaldehyde [2-Butenal]	4170-30-3	20,000	b
Crotonaldehyde, (E)- [2-Butenal, (E)-]	123-73-9	20,000	b
Cyanogen chloride	506-77-4	10,000	c
Cyclohexylamine [Cyclohexanamine]	108-91-8	15,000	b
Diborane	19287-45-7	2500	b
Dimethyldichlorosilane [Silane, dichlorodimethyl-]	75-78-5	5000	b
The mixture exemption in 68.115(b)(1) does not apply to the substance.			

(continued)

Appendix 1-1 (continued)

Chemical name	CAS No.	Threshold quantity (lb)	Basis for listing
1,1-Dimethylhydrazine [Hydrazine, 1,1-dimethyl-]	57-14-7	15,000	b
Epichlorohydrin [Oxirane, (chloromethyl)-]	106-89-8	20,000	b
Ethylenediamine [1,2-Ethanediamine]	107-15-3	20,000	b
Ethyleneimine [Aziridine]	151-56-4	10,000	b
Ethylene oxide [Oxirane]	75-21-8	10,000	a,b
Fluorine	7782-41-4	1000	b
Formaldehyde (solution)	50-00-0	15,000	b
Furan	110-00-9	5000	b
Hydrazine	302-01-2	15,000	b
Hydrochloric acid (conc 30% or greater)	7647-01-1	15,000	d
Hydrocyanic acid	74-90-8	2500	a,b
Hydrogen chloride (anhydrous) [Hydrochloric acid]	7647-01-1	5000	a
Hydrogen fluoride/Hydrofluoric acid (conc 50% or greater) [Hydrofluoric acid]	7664-39-3	1000	a,b
Hydrogen selenide	7783-07-5	500	b
Hydrogen sulfide	7783-06-4	10,000	a,b
Iron, pentacarbonyl- [Iron carbonyl (Fe(CO) ₅), (TB-5-11)-]	13463-40-6	2500	b
Isobutyronitrile [Propanenitrile, 2-methyl-]	78-82-0	20,000	b
Isopropyl chloroformate [Carbonochloridic acid, 1-methylethyl ester]	108-23-6	15,000	b
Methacrylonitrile [2-Propenenitrile, 2-methyl-]	126-98-7	10,000	b
Methyl chloride [Methane, chloro-]	74-87-3	10,000	a
Methyl chloroformate [Carbonochloridic acid, methylester]	79-22-1	5000	b
Methyl hydrazine [Hydrazine, methyl-]	60-34-4	15,000	b
Methyl isocyanate [Methane, isocyanato-]	624-83-9	10,000	a,b
Methyl mercaptan [Methanethiol]	74-93-1	10,000	b
Methyl thiocyanate [Thiocyanic acid, methyl ester]	556-64-9	20,000	b
Methyltrichlorosilane [Silane, trichloromethyl-]	75-79-6	5000	b
Nichel carbonyl	13463-39-3	1000	b
Nitric acid (conc 80% orrr greater)	7697-37-2	15,000	b
Nitric oxide [Nitrogen oxide (NO)]	10102-43-9	10,000	b
¹ The mixture exemption in 68.115(b)(1) does not apply to the substance.			

(continued)

Appendix 1-1 (continued)

Chemical name	CAS No.	Threshold quantity (lb)	Basis for listing
Oleum Fuming Sulfuric acid) [Sulfuric acid, mixture with sulfur trioxide] ¹	8014-95-7	10,000	e
Peracetic acid [Ethaneperoxy acid]	79-21-0	10,000	b
Perchloromethylmercaptan [Methanesulfonyl chloride, trichloro-]	594-42-3	10,000	b
Phosgene [Carbonyl dichloride]	75-44-5	500	a,b
Phosphine	7803-51-2	5000	b
Phosphorus oxychloride [Phosphoryl chloride]	10025-87-3	5000	b
Phosphorus trichloride [Phosphorous trichloride]	7719-12-2	15,000	b
Piperidine	110-89-4	15,000	b
Propionitrile [Propanenitrile]	107-12-0	10,000	b
Propyl chloroformate [Carbonochloridic acid, propylester]	109-61-5	15,000	b
Propylaneimine [Aziridine, 2-methyl-]	75-55-8	10,000	b
Propylene oxide [Oxirane, methyl-]	75-56-9	5000	b
Sulfur dioxide (anhydrous)	7446-09-5	5000	a,b
Sulfur tetrafluoride [sulfur fluoride (SF ₄), (T-4)-]	7783-60-0	2500	b
Sulfur trioxide	7446-11-9	10,000	a,b
Tetramethyllead [Plumbane, tetramethyl-]	75-74-1	10,000	b
Tetranitromethane [Methane, tetranitro-]	509-14-8	10,000	b
Titanium tetrachloride [Titanium chloride (TiCl ₄) (T-4)-]	7550-45-0	2500	b
Toluene 2,4-diisocyanate [Benzene, 2,4-diisocyanato-1-methyl-]1	584-84-9	10,000	a
Toluene 2,6-diisocyanate [Benzene, 1,3-diisocyanato-2-methyl-]1	91-06-7	10,000	a
Toluene diisocyanate (unspecified isomer) [Benzene, 1,3-diisocyanatomethyl-] ¹	26471-62-5	10,000	a
Trimethylchlorosilane [Silane, chlorotrimethyl-]	75-77-4	10,000	b
Vinyl acetate monomer [Acetic acid ethenyl ester]	108-05-4	15,000	b

NOTE: Basis for Listing:

- a Mandated for listing by Congress.
- b On EHS list, vapor pressure 10 mmHg or greater.
- c Toxic gas.
- d Toxicity of hydrogen chloride, potential to release hydrogen chloride, and history of accidents.
- e Toxicity of sulfur trioxide and sulfuric acid, potential to release sulfur trioxide, and history of accidents.

¹The mixture exemption in 68.115(b)(1) does not apply to the substance.

H. Physical Features To Inspect in Addition To those Listed in TEAM Guide	2
I. People To Interview	2
J. Guidance for Cultural Resources Management Checklist Users	3

SECTION 2

CULTURAL RESOURCES MANAGEMENT

A. U.S. Army Regulations (ARs) and Policies

- AR 420-40, *Historic Preservation*. This AR, dated 15 May 1984, provides policy and regulatory guidance on historic preservation. It establishes the Army's goals to protect buildings, structures, sites, and objects of historical, architectural, archaeological, or cultural value located on Army-controlled property, as required by the *National Historic Preservation Act* (NHPA), *Archaeological Resources Protection Act* (ARPA), and other laws. It contains definitions of pertinent terms and descriptions of compliance procedures.

B. Department of Defense (DOD) Directives and Instructions

- DOD Directive (DODD) 4710.1, *Archaeological and Historic Resources Management*. This directive, dated 21 June 1984, provides policy, prescribes procedures, and assigns responsibilities for the management of archaeological and historic resources located in and on water and land under DOD control. It establishes the policy that DOD components will integrate the archaeological and historical preservation requirements of applicable laws with the planning and management of activities under DOD control.

C. Using the TEAM Guide for ECAS

- Use Version 1 of the checklist when conducting ECAS assessments.
- When Native American remains, funerary objects, or other cultural items are discovered, the Secretary of the Army is to be notified.

D. Key Army/DOD Compliance Requirements

- Historic Preservation Plan (HPP) - Army installations with historic properties are required to develop an HPP that ensures compliance with these applicable regulations and standards.

E. Key Compliance Personnel

- The Installation Commander (IC) is responsible for funding historic preservation programs through the Command Operating Budget (COB).
- The Directorate of Public Works (DPW) is responsible for supervising, controlling, and managing installation historic preservation programs.

- The Installation Historic Preservation Officer (IHPO) is responsible for implementing the historic preservation program, training installation personnel, and locating, inventorying, and evaluating installation cultural resources. Along with the State Historic Preservation Officer (SHPO), the IHPO negotiates the Memoranda of Agreement (MOA) with the SHPO, which contain detailed descriptions (programmatics) of specific preservation actions, and ensures that all provisions of the agreement are met.

F. Key Army Compliance Definitions

- *Significant* - having a characteristic that makes a property eligible for listing on the National Register (DOD Directive 4710.0).

G. Records To Review in Addition To Those Listed in TEAM Guide

- Installation Master Plan
- Historic Preservation Plan (HPP)
- Archaeological site forms and maps
- *National Environmental Policy Act* (NEPA) mitigation plans
- For construction (including maintenance, demolition, rehabilitation, etc.) activities: documentation of finding of no adverse effect, finding of adverse effect, Memorandum of Agreement (MOA) with the SHPO, or requests for comment when there is no agreement on historic properties
- Nominations to National Register
- Correspondence with SHPO for consensus determinations of eligibility; determinations of no effect no adverse effect, and adverse effect
- Standing Operating Procedures (SOPs) for ensuring compliance
- MOA and Programmatic Memoranda
- ARPA permits
- Curation inventories and bailment agreements
- Inventory of historic properties
- Cultural resources reports, contracts, and scopes of work

H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide

- Sites of historic, archaeological, or Native American interest (designation, protection, and interpretation)
- Repositories of archaeological records and collections
- Buildings and structures of potential historical significance (national, state, or local)

I. People To Interview

- Installation Historic Preservation Officer (IHPO)
- Directorate of Public Works (DPW)
- Environmental Coordinator (EC)
- Director of Plans, Training, Mobilization, and Security (DPTMSEC)
- Public Affairs Office (PAO)
- Master Planner (DPW)

I. People To Interview	3
J. Guidance for Hazardous Materials Management Checklist Users	5

SECTION 3

HAZARDOUS MATERIALS MANAGEMENT

A. U.S. Army Regulations (ARs) and Policies

- AR 200-1, *Environmental Protection and Enhancement*. This AR, dated 23 May 1990, addresses management of the environment. Chapter 5, *Hazardous Material Management Program*, implements the Army program to minimize hazards to public health and damage to the environment. It provides guidance for the management of hazardous materials including storage and disposal.

B. Department of Defense (DOD) Directives and Instructions

- DOD Directive (DODD) 6050.8, *Storage and Disposal of Non-DOD-Owned Hazardous or Toxic Materials on DOD Installations*. This directive, dated 27 February 1986, prohibits the storage of non-DOD hazardous materials on DOD installations.

C. Using the TEAM Guide For ECAS

- According to the memorandum titled *Review Comments on the Army Supplement to The Environmental Assessment and Management (TEAM) Guide*, dated 27 February 1995, no checklist items in the Hazardous Materials Management section will be ignored. But, emphasis should be placed on checklist items which contribute to a well managed hazardous material/hazardous waste program and can be related to an environmental issue.

D. Key Army/DOD Compliance Requirements

- Hazardous Materials Training - Personnel who handle hazardous materials are required to be trained in the safe handling and management of the materials they work with routinely.
- Master List - A master listing of all hazardous substances at handling, storage, and transfer facilities is required as a part of the Spill Prevention, Control, and Countermeasure (SPCC) Plan.
- Waste Minimization - Hazardous material management is to be considered an integral part of the Army Hazardous Waste Minimization Program. Installations are required to have an Army Hazardous Waste Minimization Program.
- Spill Reporting - Any spill of a hazardous substance must be reported to the Installation On-Scene Coordinator (IOSC) immediately.

E. Key Compliance Personnel

- Director of Logistics (DOL) has primary responsibility to receive, store, and issue all hazardous commodities. DOL reviews all items that have a potential health hazard and determines if an issue exception code (IEC) should be assigned to the item before being placed in storage. The receipt of hazardous materials with the proper documentation and shipping papers is also the responsibility of

DOL. The proper maintenance and operation of flammable/combustible materials storage facilities, acid storage facilities, and compressed gas storage facilities is also the responsibility of DOL. DOL ensures all hazardous materials are properly labeled.

- Medical Department Activity (MEDDAC)/Medical Center (MEDCEN) is responsible for reviewing the IECs for hazardous materials assigned by DOL, and approving or disapproving the recommendations.
- Directorate of Public Works (DPW) is responsible for the storage and handling of all hazardous materials in properly designed facilities. DPW is also responsible for reporting releases of reportable quantities of hazardous substances to U.S. Environmental Protection Agency (USEPA) and appropriate state authorities.
- Installation Fire Department provides support in emergency response, spill events, exercises, and fire protection activities. In addition, the department is responsible for making periodic fire safety inspections of flammable/combustible storage and handling areas on the installation.
- Safety Officer is responsible for conducting work place safety evaluations and inspections of the handling and storage of hazardous materials. The Safety Officer provides the appropriate manager with a report of findings and recommended corrective actions. The Safety Officer is also responsible for ensuring the prompt and accurate investigation of any hazardous material mishaps that result in injury or property damage.

F. Key Army/DOD Compliance Definitions

- *Hazardous or Toxic Materials* - materials defined in section 101 of the *Comprehensive Environmental Response, Compensation, and Liability Act* (CERCLA) or that are of an explosive, flammable, or pyrotechnic nature (DODD 6050.8, Section C).
- *Personnel Training* - training to meet the requirements of all applicable regulations. This level of training ensures a high level of competency in performing within a given job description (AR 200-1, Glossary).
- *Waste Minimization* - any source reduction or recycling activity that is undertaken by a generator that results in the reduction of hazardous waste or the reduction in toxicity of hazardous waste that is either generated or subsequently treated, stored, or disposed of (AR 200-1, Glossary).

G. Records To Review in Addition To Those Listed in TEAM Guide

- Hazardous Material Inventory
- The OHSCP

H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide

- Hazardous Material Storage Areas (DOL - Supply, Shops)
- Shipping and Receiving Areas
- Supply and Storage Shops (DPW, DOL)
- Self Service Supply Center (DOL)
- Military Unit Supply/Storage Areas

I. People To Interview

- Directorate of Public Works (DPW)
- Environmental Coordinator (EC)
- Director of Logistics (DOL)
- Fuels Management Officer (DOL/DPW)
- Transportation/Maintenance Officer (DOL)
- Chief of Operations and Maintenance (O&M)

J. Guidance for Active Army Hazardous Materials Management Checklist Users

	REFER TO CHECKLIST ITEMS:	REFER TO PAGE NUMBER:
All Installations	HM.1.1.A through HM.1.4.A	3-7
Releases of Hazardous Materials	HM.20.1.A	3-9

COMPLIANCE CATEGORY:
HAZARDOUS MATERIALS MANAGEMENT

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:
May 1995

**HM.1
ALL INSTALLATIONS**

HM.1.1.A. Copies of all relevant Federal, DOD, Army, and state/local regulations, and guidance documents on hazardous materials management, or access to electronic bulletin boards (e.g., DENIX) should be available at the installation (MP).

HM.1.2.A. Management and organization of paperwork, materials, and personnel should be done in a manner that prevents noncompliance and recurrence of noncompliance, precludes/minimizes regulatory enforcement actions (including warning letters etc.) promotes good public relations, and addresses systemic weaknesses in the overall operation of the program (MP).

HM.1.3.A. The installation should coordinate with the fire department concerning the types of hazardous chemicals used at the installation, the areas where they are used, what they are used for, and the quantities used in a given operation (MP).

Verify that the following documents, which are applicable, are maintained and kept current at the installation.

- 40 CFR 112, *Oil Pollution Prevention*.
- EO 12088, *Federal Compliance with Pollution Standards*.
- DODD 6050.8, *Storage and Disposal of Non-DOD Owned Hazardous or Toxic Materials in DOD installations*.
- AR 200-1, *Environmental Protection and Enhancement*.
- NFPA, *Fire Protection Guide of Hazardous Materials*.
- applicable state and local regulations.

Determine what management systems are in place.

Verify that the existing system addresses the issues associated with hazardous materials by:

- interviewing personnel
- reviewing paperwork
- observing the operation or activity.

Determine if training is being conducted.

Verify that installation environmental policies and regulations are sufficient and fully implemented.

Verify that the fire department is aware of the hazardous chemicals used at the installation.

Verify that the fire department is aware of areas that are at high risk for chemical incidents.

J. Guidance for Hazardous Waste Management Checklist Users	7

SECTION 4

HAZARDOUS WASTE MANAGEMENT

A. U.S. Army Regulations (ARs) and Policies

- AR 200-1, *Environmental Protection and Enhancement*. This AR is dated 23 May 1990. Chapter 6 defines Army policy and procedures for managing hazardous waste, including resource recovery, recycling, waste reduction, and training programs.

The hazardous waste management program requirements of AR 200-1 are that Army, U.S. Army Reserve (USAR), and Army National Guard (ARNG) installations and tenants will be aware of and comply with all applicable laws (Federal, state, and local); ensure that program and budget requests identify resource requirements to carry out management duties; encourage the use of joint or regional facilities to minimize costs; minimize generation and land disposal of hazardous wastes; prohibit the storage of hazardous wastes in underground storage tanks (USTs); conform to all laws, including international laws, on ocean dumping; and in general, "generate, transport, treat, store, and dispose of wastes such as pesticides, hazardous chemical stocks, medical, dental, and veterinary supplies, radioactive materials, and propellant, explosive, and pyrotechnic (PEP) materials, explosive ordnance, or chemical warfare agents in a manner that protects public health and the environment" (para 6-2).

B. Department of Defense (DOD) Directives and Instructions

- All applicable directives and instructions have previously been implemented by ARs.

C. Using The TEAM Guide for ECAS

- When assessing an installation with a Defense Reutilization and Marketing Organization (DRMO) onsite, assess the DRMO.
- Review the Hazardous Waste Management Plan for a list of accumulation points and identify those accumulation points active at the installation that are not listed in the plan.
- The RCRA Hazardous Waste Minimization plan may be incorporated into the Pollution Prevention Plan.

D. Key Army/DOD Compliance Requirements

- Installation Hazardous Waste Management Plan (IHWMP) - Each Installation Commander (IC) will ensure that a written hazardous waste management plan is maintained to provide installation personnel with procedures and responsibilities to manage hazardous wastes consistent with all applicable laws and regulations. The Directorate of Public Works (DPW) will prepare the plan and provide copies to all facility personnel that generate, transport, treat, store, and dispose of hazardous waste. The plan will be signed by the IC and will:
 1. include responsibilities of installation organizations and personnel in generating, treating, storing, and disposing of hazardous waste

2. show a U.S. Environmental Protection Agency (USEPA) and state identification number to generate, treat, store, dispose of, transport, or offer for transportation hazardous wastes
3. specify the type and quantity of hazardous waste for each hazardous waste generating activity (including tenants)
4. describe waste minimization projects, funds, and saving
5. identify the location of all hazardous waste treatment, storage, or disposal facilities (TSDFs)
6. describe installation procedures to treat, store, dispose of, transport onpost, or offer for transport offpost hazardous waste, consistent with the requirements of 40 CFR 260 through 40 CFR 271, including requirements of a *Resource Conservation Recovery Act* (RCRA) permit
7. include procedures to analyze hazardous wastes
8. include procedures to inspect the hazardous waste units for malfunction and deterioration, operator errors, and discharges that may be causing, or may lead to release of hazardous waste constituents to the environment, or a threat to human health
9. include procedures to prevent unauthorized entry to the hazardous waste units
10. describe the program to train all applicable facility personnel with Federal, state, and Army requirements to ensure compliance with RCRA
11. include procedures of the contingency plan to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water, consistent with requirements of 40 CFR 264, Subpart D
12. include procedures to temporarily treat, store, and dispose of hazardous waste if the use of existing facilities is unavailable, identifying temporary storage facilities, alternate disposal site, and handling procedures
13. include a copy of the RCRA operating record, if applicable
14. include a copy of the RCRA permit, if applicable
15. reference the location of the Spill Prevention, Control, and Countermeasure (SPCC) Plan and the Installation Spill Contingency Plan (ISCP), and summarize emergency reporting information for reporting and containing spills and illegal dumping
16. include references for obtaining technical information on determining if a waste is hazardous; the location of offsite RCRA approved TSDFs; the names of state and Federally approved hazardous waste transporters; and the names and addresses of state and Federal regulatory agencies administering the RCRA program.

E. Key Compliance Personnel

- The IC - The IC is responsible for establishing and maintaining an active program of surveillance of the users of hazardous materials; generators, transporters, and storers of hazardous wastes; the waste minimization program; and disposal activities. By DOD direction, the IC is responsible for compliance with RCRA and state regulations involving host and tenant organizations on the installation. The commander signs all permit applications and reports submitted to the USEPA or state agencies as part of this overall management responsibility. In the event that the IC is not a Colonel or higher or commands less than 250 persons, RCRA permit applications must be referred up the chain of command to an official in the grade of Colonel or higher for signature. In either case, operational responsibility for the hazardous waste program rests with the activities that generate, treat, store, transport, or dispose of the waste in accordance with guidance and direction provided by the activities responsible for implementing health, safety, and environmental protection programs.
- DPW and Directorate of Safety and Health (DSH) - The DPW/DSH will serve as the IC's expert representative for the management of all wastes, unless otherwise directed by the IC.

In the area of compliance, the DPW/DSH will immediately advise the IC on the receipt of enforcement notices, such as notices of violation (NOVs), consent orders, or RCRA compliance agreements; advise all waste generating activities on state, Federal, host nation, and Army requirements for managing hazardous waste, including requirements for permits and reporting and recordkeeping; prepare all required reports on hazardous waste, including the biennial report (USEPA Form 8700-13A), the A-106 report (see Section 5, Other Environmental Issues), and the annual hazardous waste report; monitor installation compliance with Federal, state, local, and host nation hazardous waste requirements, including activities of tenants and subinstallations; prepare and monitor compliance with the hazardous waste management plan that establishes procedures and responsibilities for managing hazardous wastes.

In the area of waste management (including disposal), the DPW/DSH will advise the IC, in coordination with generating activities, on the most cost-effective and efficient means of waste storage, treatment, and disposal; provide technical assistance and guidance to hazardous waste generating activities, tenants, and operators of RCRA hazardous waste TSDFs; provide for analysis of waste to determine if it is hazardous under applicable laws; ensure hazardous wastes are properly identified, segregated, and weighed before treatment, storage, disposal, or transportation; certify that wastes are hazardous wastes and provide copies of waste analysis before arranging for offpost transportation; coordinate an annual installation-wide inventory of all hazardous waste, and identify the waste generating activities; establish, monitor, and execute programs in waste management, including waste minimization, resource recovery, and recycling.

- Director of Logistics (DOL) - The DOL will monitor installation-wide use of hazardous materials to ensure progress in meeting Federal and Army hazardous waste minimization goals and requirements, and provide quarterly progress reports to the DPW. On a semi-annual basis, the DOL will recommend opportunities and provide a progress report to the IC in reducing the use and toxicity of hazardous materials, following the concurrence of the DPW.

Additionally, the DOL will arrange for and monitor all onpost and offpost shipments of hazardous waste, ensuring compliance with applicable laws and requirements; prepare and maintain records on transporting hazardous wastes, including manifests, and records maintained by the DRMO where co-located on an Army installation; sign the hazardous waste manifest as the IC's designee; coordinate with the DPW to obtain certification that wastes meet the Federal and state definition of hazardous wastes before offering for offpost transportation; advise waste generating activities on proper requirements for packaging, labelling, and shipping of solid waste and hazardous waste to enable the DOL to ensure that offpost transportation of these wastes conforms with Federal, state, Army, DOD, and host nation requirements; actively support the DPW in measuring progress to meet Federal and Army waste reduction goals and requirements; and communicate regularly with the Defense Logistics Agency (DLA) activity serving the installation to maintain current information on markets for hazardous wastes.

If not done by DOL, the Environmental Manager's Office may assume responsibility for manifesting, shipment, and recordkeeping.

- Commanders of Medical Department Activities (MEDDACs) and U.S. Army Medical Centers (MEDCENS) - MEDDAC and MEDCEN commanders will: provide the IC or IC's designee with the hazardous waste management implications of new and revised MEDDAC/MEDCEN practices for review and concurrence; and prepare and maintain a management plan for the disposal of medical waste.

- Installation Preventive Medicine Services (PVNTMED) - PVNTMED personnel will support the hazardous waste management programs, provide technical assistance in identifying wastes and inventorying sources of hazardous wastes, and represent the MEDDAC/MEDCEN as an installation tenant and hazardous waste generator.
- Installation Safety Officers - The installation safety officer (for ARNG, the state safety officer) will monitor the storage, packaging, transportation, treatment, storage, and disposal of waste, and personnel training requirements to ensure compliance with Federal, state, and Army safety standards.
- Chief, Installation Public Affairs Office (PAO) - PAO will establish the necessary supporting public affairs program; coordinate and conduct public involvement to obtain an RCRA permit and RCRA permit modifications, including an Environmental Assessment (EA) or Environmental Impact Statement (EIS); and assist the commander in preparing for any public hearings or public meetings sponsored by USEPA or states to issue or modify a RCRA permit for the installation.
- Tenants (Federal and non-Federal) - Tenants (such as the DRMO) on Army properties or where the Army is a tenant on non-Army property will comply equally with all laws and requirements.
- Managers of Government-Owned Contractor-Operated (GOCO) Facilities - GOCOs that produce hazardous waste on Army installations will: apportion fees to support the treatment, storage, and disposal of hazardous wastes; establish administrative requirements to preclude the Federal Government from incurring liability associated with treatment, storage, or disposal of hazardous wastes; prohibit the use of DOD personnel in handling solid and hazardous wastes; comply with Federal, state, and local laws and regulations and Army policies on reducing the volume, quantity, or toxicity of hazardous waste; prohibit the use of onsite hazardous waste TSDFs for non-DOD owned hazardous wastes generated offsite; pay fines assessed by state and Federal regulatory agencies for non-compliance (the Army cannot reimburse for such fines).
- Hazardous Waste Generators - Generators will properly identify, label, package, treat, store, dispose of, measure, transport onpost, or offer for transport offpost, hazardous wastes per requirements of RCRA, Department of Transportation (DOT), and the IHWP. Also, generators will ensure that all hazardous wastes generated during operations are certified by the DPW and tracked to minimize the potential for worker exposure, spills, or mixture with nonhazardous wastes; maintain accountability for, and document the flow of hazardous materials from the point of receipt to point of turn-in for disposal; minimize waste generation wherever possible and feasible; provide the DPW with the information necessary to prepare reports per the hazardous waste management plan; maintain an accurate inventory of hazardous waste that reflects changes in operation.
- Hazardous Waste TSDF Operators - Each TSDF operator is responsible for ensuring compliance with hazardous waste regulations and permit standards applicable to the facility including maintaining operational and training records.
- Defense Reutilization and Marketing Service (DRMS) - This agency may or may not be located on the installation. Regardless, it is the single agency designated by DOD to provide hazardous waste disposal service to the installation on a pay-for-services-rendered basis. The DRMS is responsible for compliance with all USEPA, state, and Army (including installation guidance) regulations at its storage/disposal facility. The DRMS may sign a manifest on behalf of the IC but the commander is still responsible for correct waste classification and manifest information.

F. Key Army/DOD Compliance Definitions

- *Chemical Warfare Agent* - a substance, which because of its chemical properties, is used in military operations to kill, seriously injure, or incapacitate humans or animals or deny use of indigenous resources (AR 200-1, Glossary).
- *National Response Center (NRC)* - the Washington D.C. Headquarters that coordinates activities relative to pollution emergencies. It is located at Headquarters U.S. Coast Guard (USCG) (AR 200-1, Glossary).

G. Records To Review in Addition To Those Listed in TEAM Guide

Generator (including TSDFs if they are also generators):

- Hazardous Waste Management Plan
- Used Solvent Elimination Program Contract (DPW or DOL)

In addition to the above, TSDFs would require:

- Location map of TSDFs

H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide (see Appendix 4-1)

- DRMOs

I. People To Interview

- Directorate of Public Works (DPW)
- Environmental Coordinator (EC)
- Safety and Health Officer
- Fire Department
- Director of Logistics (DOL)
- TSDF Operators (DPW, DOL, DRMS)
- Shop Activity Supervisor
- Defense and Reutilization Marketing Office (DRMO)
- Director of Personnel and Community Activities

Copies of all relevant Federal, DOD, Army, and state/local regulations, and guidance documents on hazardous waste management, or access to electronic bulletin boards (e.g., DENIX) should be available at the installation (MP).</p>	<p>Verify that current copies of the following, which are applicable, are maintained at the installation:</p> <ul style="list-style-type: none"> - 40 CFR 260, <i>Hazardous Waste Management Systems: General.</i> - 40 CFR 261, <i>Identification and Listing of Hazardous Waste.</i> - 40 CFR 262, <i>Standards Applicable to Generators of Hazardous Waste.</i> - 40 CFR 263, <i>Standards Applicable to Transporters of Hazardous Waste.</i> - 40 CFR 264, <i>Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities.</i> - 40 CFR 265, <i>Interim Status Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities.</i> - 40 CFR 266, <i>Standards for the Management of Specific Hazardous Wastes and Specific Types of Hazardous Waste Management Facilities.</i> - 40 CFR 268, <i>Land Disposal Restriction.</i> - 40 CFR 270, <i>The Hazardous Waste Permit Program.</i> - 49 CFR 171, <i>General Information, Regulations, and Definitions.</i> - 49 CFR 172, <i>Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, and Training Requirements.</i> - 49 CFR 173, <i>General Requirements for Shipments and Packaging.</i> - 49 CFR 178, <i>Specifications for Packaging.</i> - NFPA, <i>Fire Protection Guide of Hazardous Materials.</i> - AR 200-1, <i>Environmental Protection and Enhancement</i>, 23 May 1990. - applicable state and local regulations. <p>Determine if installation environmental staff is familiar with and knowledgeable about regulatory requirements.</p> <p>(NOTE: States may obtain authorization to operate the RCRA program from USEPA, provided regulations at least as stringent as USEPA regulations have been passed and an agreement has been signed with USEPA. State may pass more stringent regulations.)</p>

COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
U.S. TEAM Guide: Active Army Supplement

**REGULATORY
REQUIREMENTS:**

HW.1.2.A. Management and organization of paperwork, materials, and personnel should be done in a manner that prevents noncompliance and recurrence of noncompliance, precludes/minimizes regulatory enforcement actions (including warning letters etc.) promotes good public relations, and addresses systemic weaknesses in the overall operation of the program (MP).

REVIEWER CHECKS:
May 1995

Determine what management systems are in place.

Verify that the existing system addresses the issues associated with hazardous waste management by:

- interviewing personnel
- reviewing paperwork
- observing the operation or activity.

Determine if training is being conducted.

Determine how hazardous waste is managed by starting at a point of generation and identifying through interviews, site visits, and paperwork review:

- how, where, and when the waste was generated
- how the waste was identified as being hazardous
- how waste is handled to prepare it for disposal or treatment
- where the waste is finally disposed of or treated.

Verify that installation environmental policies and regulations are sufficient and fully implemented.

COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
U.S. TEAM Guide: Active Army Supplement

Installations are required to report hazardous waste minimization efforts (AR 200-1 para 6-6c(1)).</p>	<p>Verify that the installation submits, by 1 March of even numbered years, USEPA Form 8700-13A/B to the appropriate state or USEPA Regional Administrator (depending upon whether the state has an USEPA-approved RCRA program).</p> <p>Verify that the report includes a description of efforts undertaken during the year to reduce the volume and toxicity of hazardous waste generated, and a description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years.</p>
<p>HW.1.7.A. Munitions and ordnance which have been designated as waste are required to be handled according to RCRA hazardous waste management requirements (AR 200-1, para 6-7e).</p>	<p>Confirm that, if installation has explosive ordnance that become waste, the installation proactively adheres to AR 200-1, and appropriate state and Federal RCRA requirements.</p>
<p>HW.1.8.A. Chemical warfare agents destined for disposal will be managed as hazardous waste under RCRA, if applicable (AR 200-1, para 6-9a).</p>	<p>Verify that if the installation does have chemical warfare agents destined for disposal, they are treated as hazardous waste under RCRA.</p> <p>Verify that the IC reports, through command channels, to Headquarters, Department of the Army (HQDA) (DALO-SMZ) on the handling, use, inventory, or disposal of chemical warfare agents. Commanders will report on chemical accidents and incidents as required.</p>
<p>HW.1.9.A. Disposal of medical, dental, and veterinary supplies and wastes must meet specific requirements (AR 200-1, para 6-11).</p>	<p>Verify that medical, dental, and veterinary supplies and wastes that are RCRA listed or characteristic wastes are managed through the DRMO or a commercial contract with a permitted disposal firm.</p> <p>Determine if the generator possess the technical capability and facilities to dispose of items that are not RCRA listed but should be treated as a RCRA hazardous waste.</p> <p>Verify that, if the generator cannot dispose of the hazardous waste according to approved methods, the generator contacts DRMO for guidance.</p>

COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
U.S. TEAM Guide: Active Army Supplement

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:
May 1995

HW.1.9.A. (continued)

Confirm that ICs disposing of such medical, dental, and veterinary wastes by land burial maintain records on:

- quantities disposed
- disposal method used
- disposal site location.

COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
U.S. TEAM Guide: Active Army Supplement

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: May 1995
<p>HW.15 CONDITONALLY EXEMPT SMALL QUANTITY GENERATORS (CESQGs)</p> <p>HW.15.1.A. All CESQG personnel who handle hazardous waste should meet certain training requirements (MP).</p>	<p>Verify that the training program is directed by a person trained in hazardous waste management procedures.</p> <p>Verify that the training program includes the following:</p> <ul style="list-style-type: none"> - contingency plan implementation (emergency procedures, equipment, and systems) - key parameters for automatic waste feed cut-off system - procedures for using, inspecting, and repairing emergency and monitoring equipment - operation of communications and alarm systems - response to fire or explosion - response to leaks or spills - waste turn in procedures - identification of hazardous wastes - container use, marking, labeling, and onsite transportation - manifesting and offsite transportation - accumulation point management - personnel health and safety and fire safety - facility shutdown procedures. <p>Verify that new employee training is completed within 6 mo of employment.</p> <p>Verify that an annual review of initial training is provided.</p> <p>Verify that employees do not work unsupervised until training is completed.</p> <p>Verify specifically that accumulation point managers and hazardous waste handlers have been trained.</p>

Examine training records and verify they include the following:

- job title and description for each employee by name
- written description of how much training each position will obtain
- documentation of training received by name.

Determine if training records are retained for 3 yr after employment at the installation.

Verify that records accompany employees transferred within the Army.

Appendix 4-1

Operations and Related Hazardous Waste Streams

Not all operations listed will generate hazardous waste. Wastes listed may be a solid waste, a state hazardous waste, or a RCRA hazardous waste.

Directorate of Logistics (DOL)

- Maintenance/transportation operations (opns): solvents, hydraulic fluids, fuels, ethylene glycol, battery acids, paint wastes, oils, brake fluid, spill residue, contaminated rags, oil filters, heavy metal contaminated sludges, brake pads, batteries.
- Painting operations: paint strippers, paint thinners, paint wastes (slop), epoxy (resin), filters, abrasive blast residue.
- Battery shop: battery acids, spill residue, hazardous materials that become hazardous waste due to shelf-life, expiration or package deterioration (check supplies, inventory management, waste management).
- Dry cleaning/laundry operations: filters, perchloroethylene, corrosive.

Directorate of Public Works (DPW)

- Vehicle and engine maintenance (maint) operations: solvents, hydraulic fluids, fuels, ethylene glycol, battery acids, paint wastes, oils, brake fluid, spill residue, contaminated rags, oil filters, heavy metal contaminated sludges, brake pads, batteries.
- Residential/occupational housing maintenance: lead paint debris, lead paint, paint wastes, solvents, oils, contaminated rags.
- Electrical maintenance: oils, solvents, PCBs (transformer fluids).
- Roads and grounds maintenances: oils, fuels, spill residue, paint.
- Emergency operations: boiler blowdown wastes, feed water chemicals, feed water testing wastes.
- Carpentry shop: varnishes, stains, adhesives, sealants.
- Metal shops: cutting oils, toxic metals.
- Painting operations: paint strippers, paint thinners, paint wastes (slop), epoxy (resin), filters, residue from abrasive blasting operations.
- Incinerator: ash.

(continued)

Appendix 4-1 (continued)

Medical Facility

- Pathology department: alcohol, methanol, acetone, formaldehyde, xylene, miscellaneous chemicals.
- X-ray operations: silver recovery unit.
- Pharmacy: pharmaceuticals.

Motor Pools

- For motor pools be sure to track waste from point of generation to storage location: solvents, hydraulic fluids, fuels, ethylene glycol, battery acids, paint wastes, oils, brake fluid, spill residue, contaminated rags, oil filters, heavy metal contaminated sludges, brake pads, batteries.

Airfields

- For airfields, be sure to track waste from point of generation to storage location: solvents, hydraulic fluids, fuels, ethylene glycol, battery acids, paint wastes, oils, brake fluid, spill residue, contaminated rags, oil filters, heavy metal contaminated sludges, brake pads, batteries, paint strippers, paint thinners, epoxy (resin), filters, residue from abrasive blasting operations.

NBC Operations/Storage Areas

- DS2, STB, decontamination kits, filters, batteries.

Print Plant

- Inks, solvents, rags.

TASC

- Photographic processing chemicals, paint wastes, inks, solvents, residue from abrasive blasting operations, waste from plastics modeling operations.

Open Burning/Open Detonation Sites

- Check permit and operations for compliance.

TSDf

- Check permit and operations for compliance.

Natural Resources Management (Active Army Supplement)

A. U.S. Army Regulations (ARs) and Policies	1
B. Department of Defense (DOD) Directives and Instructions	1
C. Using the TEAM Guide For ECAS	1
D. Key Army/DOD Compliance Requirements	1
E. Key Compliance Personnel	2
F. Key Army/DOD Compliance Definitions	3
G. Records To Review in Addition To Those Listed in TEAM Guide	4
H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide	4
I. People To Interview	4
J. Guidance for Natural Resources Management Checklist Users	5

SECTION 5

NATURAL RESOURCES MANAGEMENT

A. U.S. Army Regulations (ARs) and Policies

- AR 420-74, *Natural Resources--Land, Forest, and Wildlife Management*. This AR, dated 25 February 1986, provides Army policy for managing natural resources and attaining the goal of ensuring that Army actions are not likely to jeopardize the continued existence of endangered or threatened species or result in the destruction or adverse modification of the critical habitat of such species.
- HQDA Memorandum (DAIM-ED-H), *Endangered/Threatened Species Guidance*. This memorandum, dated 15 February 1994, implements within the Army the requirements of the *Endangered Species Act* (ESA) and implementing regulations.

B. Department of Defense (DOD) Directives and Instructions

- DOD Directive (DODD) 4700.4, *Natural Resources--Conservation and Management*. This directive, dated 29 January 89, prescribes DOD policies and establishes an integrated program for multiple-use management of the renewable natural resources on DOD lands. It directs installations to protect, conserve, and manage the watersheds and natural landscapes, the soil, the forest and timber growth, the fish and wildlife, and endangered species as vital elements of the Army mission. It further stipulates that the natural resources will be used and cared for in the combination best serving the present and future needs of the United States and its people.
- DOD Instruction (DODI) 7310.5, *Accounting for Production and Sale of Forest Products*. This instruction, dated 25 January 1988, provides policy on DOD forestry accounting procedures.

C. Using the TEAM Guide For ECAS

- Pay special attention to possible endangered species in training areas, range areas, and development areas.

D. Key Army/DOD Compliance Requirements

- Integrated Natural Resources Management Plan (INRMP) - Army installations occupying land and water are to generate a program for developing, restoring, improving, conserving, and managing those resources. The INRMP will be developed to manage natural resources on an ecosystem basis in an effort to provide, where feasible, biological diversity. INRMPs must be consistent with legal and regulatory requirements and consistent with the military mission. The plan will be integrated for the concurrent management of all resources. The plan will cover, as appropriate for the installation, land (soil and water), grazing and cropland, forests, game and nongame fish and wildlife, and outdoor recreation. The plan, with reference to supporting NEPA documentation prepared in conjunction with the plan, will consider and evaluate the interrelated effects, impacts, and the influences of climate, soil parent material, slope, aspect, and ground as well as surface water.

- Cooperative Plans - All Category I installations are required to prepare and implement Cooperative Plans for Conservation and Development of Fish and Wildlife Resources. Category I installations are those having land and water areas suitable for the conservation and management of fish, wildlife, and other natural resources as determined by consultation with appropriate Federal and state fish and wildlife agencies (AR 420-74, para 8-1b, 8-3c, and 5-4).
- Cooperative Agreements - Installations will maintain liaison with agencies through cooperative agreements. These agreements assist in developing and implementing well-coordinated, multiple-use natural resources programs.
- Proper and Legal Use of Funds - Funds collected from the outleasing of lands for agricultural and grazing purposes may only be used to support the agricultural outleasing program or to support other multiple use natural resources programs. Hunting and fishing fees may only be used to support fish and wildlife management on the installation on which it was collected. Receipts from the sale of forest products may only be used to offset costs directly related to the production of commercial forest products within the DOD (10 U.S. Code (USC) 2665, 2667, and 2671).
- Natural Resources Conservation and Beautification Committee - Installation Commanders (ICs) having natural resource programs should appoint this subcommittee of the Environmental Quality Control Committee (EQCC). The subcommittee objectives are to ensure continuous planning and application of the integrated natural resource program, promoting and fostering natural beauty; and natural resource enhancement, protection, and compliance both on the installation and in cooperation with local communities (AR 420-70).
- Natural Resources Coordinator - ICs are required to appoint a natural resources coordinator, as applicable. The coordinator should be an active member of the EQCC.
- Natural Resources Law Enforcement - Natural resources law is required to be enforced by individuals specifically trained and qualified in the area of natural resources law enforcement. This is a specific requirement of the cooperative agreement specified in the *Sikes Act* (16 USC 670 et seq and DODD 4700.4).

E. Key Compliance Personnel

- ICs are ultimately responsible for all compliance on their installation.
- Department of Public Works (DPW), or the designated Environmental Directorate is responsible for funding, supervising, controlling, and managing installation natural resources, including plant and animal species.
- Natural Resources Management Professional is responsible for preparing management plans and cooperative agreements, budgets, and the annual natural resources report. The natural resources management professional also implements and controls all activities in furtherance of natural resources management. On installations without a full-time Natural Resources Management Professional, these duties could be assigned to the environmental coordinator (EC) or community planner.

F. Key Army/DOD Compliance Definitions

- *Category I* - installations having land and water areas suitable for the conservation and management of fish and wildlife, and other natural resources (AR 420-74, para 10-4a(1)).
- *Category II* - installations for which a decision is pending as to program suitability within the meaning of Category I (AR 420-74, para 10-3a(2)).
- *Coastal Zone* - the coastal waters (including lands therein and thereunder) and the adjacent shorelands (including the waters therein and thereunder) strongly influenced by each other and in proximity to the shoreline of the several coastal states (AR 420-74, para 1-19).
- *Conservation* - the protection, improvement and use of natural resources according to principles that will provide optimum public benefit and support the military missions (AR 420-74, para 1-7).
- *Cooperative Plan* - a plan for the management of fish and wildlife on an installation which has been mutually agreed upon by the IC, Regional Director, U.S. Fish and Wildlife Service (USFWS), and the state fish and wildlife agency (AR 420-74, para 1-25).
- *Forest Management* - the science, the art, and the practice of managing and using for human benefit the natural resources that occur on or in association with forest lands (AR 420-74, para 1-10).
- *Grounds* - all land and water acreage for which an IC has responsibility (including satellite areas). Grounds are grouped into the following three categories: improved grounds; semi-improved grounds; and unimproved grounds (AR 420-74, para 1-13).
- *Improved Grounds* - acreage on which intensive maintenance activities must be planned and performed annually as fixed requirements. Activities include mowing, irrigation, fertilization, cultivation, aerification, seeding, sodding, spraying, pruning, trimming, weed, dust, and erosion control, drainage, planting for landscape effect, wind and sound abatement, and other intensive practices (AR 420-74, para 1-13).
- *Land Management* - the planning and execution of programs to improve, utilize, and maintain all land and water areas for the greatest net public benefit while supporting the military mission. Included are subordinate land uses that are mutually compatible and consistent with maintaining environmental qualities (AR 420-74, para 1-9).
- *Multiple-Use* - the integrated management of all natural resources, each with the other, to achieve the optimum use and enjoyment while maintaining the environmental qualities, ecological relationships and esthetic values in proper balance (AR 420-74, para 1-6).
- *Natural Resources* - the viable and/or renewable products of nature and their environments of soil, air, and water. Included are plants and animals occurring on grasslands, rangelands, croplands, forests, lakes, and streams (AR 420.74, para 1-6).
- *Semi-Improved Grounds* - includes areas on which periodic recurring maintenance is performed but to a lesser degree than on improved grounds. Practices normally include such cyclic variables as soil sterilization, weed and brush control, drainage maintenance, and mowing for fire protection. Semi-improved grounds acreage may be combined with improved grounds acreage for reporting purposes when only two categories of grounds are used (AR 420-74, para 1-13).

- *Sustained Yield* - production of renewable natural resources a land or water area can maintain at a given intensity of management (AR 420-74, para 1-16).
- *Unimproved Grounds* - acreage not classified as improved or semi-improved (AR 420-74, para 1-13).

G. Records To Review in Addition To Those Listed in TEAM Guide

- Natural Resources Management Plan (Parts 1 through 5, as appropriate)
- Agricultural and Grazing Lease Contracts, and Land Use Plans
- Natural Resources Annual Work Plans and Approvals
- government-owned contractor-operated (GOCO) Maintenance Plan
- Outdoor Recreation Plan
- Outdoor Recreation Cooperative Agreement
- Budget Documents (DD 1383 report, Facilities Engineers Annual Work Plan)
- Biological Inventory Reports

H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide

- Military Training areas (condition)
- Ordnance storage and disposal areas (condition)

I. People To Interview

- Directorate of Public Works (DPW)
- Environmental Coordinator (EC)
- Chief of Operations and Maintenance (O&M)
- Director of Plans, Training, Mobilization, and Security (DPTMSEC)
- Natural Resources Specialist
- Directorate of Personnel and Community Activities (DPCA)

J. Guidance for Active Army Natural Resources Management Checklist Users

	REFER TO CHECKLIST ITEMS:	REFER TO PAGE NUMBER:
All Installations	NR.1.1.A through NR.1.6.A	5-7
Miscellaneous Requirements	NR.4.1.A through NR.4.4.A	5-11
Land Management	NR.10.1.A through NR.10.8.A	5-13
Water Resources Management	NR.15.1.A and NR.15.2.A	5-17
Wildlife	NR.20.1.A through NR.20.6.A	5-19

COMPLIANCE CATEGORY:
NATURAL RESOURCES MANAGEMENT
U.S. TEAM Guide: Active Army Supplement

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:
May 1995

**NR.1
ALL INSTALLATIONS**

NR.1.1.A. Copies of all relevant Federal, DOD, Army, and state/local regulations, and guidance documents on natural resources, or access to electronic bulletin boards (e.g., DENIX) should be available at the installation (MP).

Verify that the following documents are maintained and kept current at the installations.

- 7 CFR 360, *Noxious Weed Regulations*.
- 50 CFR 21, *Migratory Bird Permits*.
- 50 CFR 402, *Interagency Cooperation--Endangered Species Act of 1973, as amended*.
- EO 12088, *Federal Compliance with Pollution Standards*.
- AR 200-2, *Environmental Effects of Army Actions*.
- AR 215-2, *Management and Operations of Army Morale, Welfare, and Recreation Programs and Nonappropriated Funds Instrumentalities*.
- AR 420-74, *Natural Resources--Land, Forest, and Wildlife Management*.
- applicable state and local regulations.

NR.1.2.A. Management and organization of paperwork, materials, and personnel should be done in a manner that prevents noncompliance and recurrence of noncompliance, precludes/minimizes regulatory enforcement actions (including warning letters etc.) promotes good public relations, and addresses systemic weaknesses in the overall operation of the program (MP).

Determine what management systems are in place.

Verify that the existing system addresses the issues associated with endangered species and natural resources by:

- interviewing personnel
- reviewing paperwork
- observing the operation or activity.

Determine if training is being conducted.

Verify that installation environmental policies and regulations are sufficient and fully implemented.

**COMPLIANCE CATEGORY:
NATURAL RESOURCES MANAGEMENT
U.S. TEAM Guide: Active Army Supplement**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: May 1995
<p>NR.1.3.A. Installations meeting size and natural resource base requirements are required to have a INRMP that meets specific criteria (AR 420-74, paras 8-1a, 8-2a, 8-3b, and 8-4).</p>	<p>Verify that the INRMP includes the following parts according to the indicated parameters:</p> <ul style="list-style-type: none"> - Part I: General (include if the installation has 500 or more acres of improved, semi-improved and unimproved grounds combined, or 50 or more acres of improved grounds) - Part II: Land Management and Ground Maintenance (include if the installation has 500 or more acres of improved, semi-improved and unimproved grounds combined, or 50 or more acres of improved grounds) - Part III: Forest Management (include if the installation has 100 or more acres of commercial forest land) - Part IV: Fish and Wildlife Management (include if the installation has land and water areas suitable for the management of fish and wildlife resources) - Part V: Outdoor Recreation (include if the installation has an outdoor recreation program that depends on the maintenance and management of natural resources). <p>Verify that, if threatened or endangered species are present, an endangered Species Management Plan is included.</p> <p>Verify that the plan is implemented.</p> <p>Verify that parts are integrated (i.e., does forestry address wildlife concerns).</p> <p>Verify that the plan is reviewed annually and revised as necessary.</p> <p>Verify that the plan was prepared or updated within the previous 5 yr.</p> <p>Verify that the plan has environmental documentation consistent with NEPA and Council on Environmental Quality (CEQ) requirements.</p> <p>Verify that the plan was prepared and is kept current by qualified personnel.</p>
<p>NR.1.4.A. All Category I installations are required to prepare and implement Cooperative Plan for Conservation and Development of Fish and Wildlife Resources (AR 420-74, para 8-1b, 8-3c, and 5-4).</p>	<p>Verify that the Cooperative Plan for Conservation and Development of Fish and Wildlife Resources is prepared and amended as appropriate in coordination with state and Federal fish and wildlife conservation agencies.</p> <p>(NOTE: Category I installations are those having land and water areas suitable for the conservation and management of fish, wildlife, and other natural resources as determined by consultation with appropriate Federal and state fish and wildlife agencies.)</p>

COMPLIANCE CATEGORY: NATURAL RESOURCES MANAGEMENT U.S. TEAM Guide: Active Army Supplement	
REGULATORY REQUIREMENTS:	REVIEWER CHECKS: May 1995
NR.1.5.A. Installations with active natural resources programs or the potential for natural resources programs under the concept of AR 420-74 are required to have a Natural Resources Conservation and Beautification Committee (AR 420-74, para 2-7).	<p>Determine if the installation has an active natural resources program or the potential for a program as described in 420-74.</p> <p>Verify that the installation has a Natural Resources and Beautification Committee that:</p> <ul style="list-style-type: none"> - assures continuous planning and balanced application of the Natural Resources Program - plans, promotes, and fosters natural beauty and environmental protection and enhancement programs both onbase and in cooperation with local communities. <p>Verify that the Committee includes:</p> <ul style="list-style-type: none"> - the facilities engineer - the natural resource management personnel - the EC - the entomologist - the provost marshal/security officer - operations, safety, legal, medical, recreation services, and veterinarian personnel - a representative of the installations' rod and gun club.
NR.1.6.A. Personnel are required to be designated and trained for environmental responsibilities (DODD 4700.4, para E3(a) and AR 420-74, para 2-2 and 2-3c).	<p>Verify that staffing optimizes professionally trained personnel necessary for technical guidance in planning and executing the Natural Resources Program such as:</p> <ul style="list-style-type: none"> - an agronomist - a forester - a wildlife manager - a landscape architect - a soil conservationist - an agricultural engineer - an ecologist - an horticulturist - an arborist. <p>Determine if periodic and comprehensive technical instruction concerning land preparation, soil management, fertilization, pruning, spraying, and other horticulture skills is provided for personnel engaged in the care and maintenance of lawns, trees, shrubs, and other landscape plants.</p>

COMPLIANCE CATEGORY:
NATURAL RESOURCES MANAGEMENT
U.S. TEAM Guide: Active Army Supplement

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:
May 1995

NR.10.4.A. Effective forest management must provide for the sustained production of timber and related natural resources values (AR 420-74, para 4-1 and 4-4).

Verify that forest management is done so that:

- volume inventories are made and kept current for all forest lands managed for timber production
- small volume (including firewood) sales are IAW AR 405-90
- harvesting and treatment provides for:
 - sustained yield
 - improved training areas
 - improved watersheds
 - improved wildlife habitat
- it complements natural beauty values along scenic corridors
- it fully supports the military mission
- it focuses on the entire ecosystem, not just commercial production.

Verify that forestry management is done in accordance with the INRMP.

NR.10.5.A. Land management operations are required to be consistent with modern conservation and land use principles (AR 420-74, para 2-10 and 2-13 through 2-16).

Verify that land management at the installation includes the following issues:

- dust and erosion control
- fire protection
- weed control.

Examine leases, easements, and other special uses and interview natural resource manager to determine compatible uses and periodic inspections for land involved, including:

- condition of agriculture, grazing, and timber (or other resources) sale areas leased
- compliance with lease provisions, environmental recreation, and good professional practice.

Verify that an inventory and classification has been done of the current resources, including identification and evaluation of the condition and potential of wetland, marine, and estuarine area, fresh water, forest land, grasslands, scenic and natural areas, aesthetics, and any other significant environmental element.

Verify that inventories identify endangered and threatened species of flora and fauna and archeological and historic sites.

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
May 1995**

NR.20.5.A. Notices of ESA violations are required to be immediately reported (DAIM-ED-H Memorandum, para 11-9).

NR.20.6.A. Installation with listed species or critical habitat, training or testing directorates, will have a mandatory ongoing training program for personnel with potential contact with listed species or their habitats (DAIM-ED-H Memorandum, para 11-10).

Determine if the installation has received a notice of ESA violation.

Verify that any violation or suspected violation was immediately reported, by telephone or electronic means, through MACOM channels to HQDA (DAIM-ED and DAJA-EL).

Verify that a written report was sent within 7 days.

Verify that testing directorates ensure users of test ranges receive appropriate awareness training.

Verify that the training covers, at a minimum:

- identification of listed species and markings that identify restricted areas
- actions necessary to avoid injury to listed species and their habitat
- the pertinent requirements of the ESA and applicable regulations
- the importance of protecting listed species and biological diversity
- the Army policy that mission accomplishments must be consistent with the conservation of listed species and critical habitats.

SECTION 6

OTHER ENVIRONMENTAL ISSUES

A. U.S. Army Regulations (ARs) and Policies

Environmental Impacts

- AR 200-1, *Environmental Protection and Enhancement*. This AR, dated 23 May 1990, identifies and lists Department of the Army (DA) responsibilities, policies, and procedures to preserve, protect, and restore the quality of the environment. AR 200-1 contains several citations to the *National Environmental Protection Act* (NEPA). Section 6-5 outlines environmental documentation requirements and procedures mandated by NEPA and set out in NEPA and AR 200-2 to address environmental issues other than those covered by U.S. Environmental Protection Agency (USEPA)/state in the *Resource Conservation and Recovery Act* (RCRA) permitting process. Section 6-9(a) requires preparation of supporting environmental documents pursuant to NEPA and other laws and regulations for the plans for disposing of chemical warfare agents. Section 9-7(c) requires that all on-the-ground work to carry out the National Contingency Plan (NCP)/RCRA requirements and the Installation Restoration Program (IRP) and Formerly Used Defense Sites (FUDS) projects be conducted per NEPA. In addition, depending on the project and its potential for environmental impact, preparation of the *Comprehensive Environmental Response, Compensation and Liability Act* (CERCLA)/*Superfund Amendments and Reauthorization Acts* (SARA) support documents will adhere to the environmental documentation requirements in NEPA. Section 10-1(a)(2) cites NEPA as one of the several laws to be used in the asbestos management program. Section 12-2(b) sets out matters to be discussed in the NEPA review of alternative methods.
- AR 200-2, *Environmental Effects of Army Actions*. This AR, dated 23 December 1988, establishes policy, procedures, and responsibilities for assessing the environmental effects of Army actions. It is coded at 32 CFR 651 and implements the following items: the Council on Environmental Quality's (CEQ) NEPA regulations, Executive Order (EO) 12114, *Environmental Effects Abroad of Major Federal Actions*, and Department of Defense Directive (DODD) 6050.1. The NEPA process is described in this regulation. AR 200-2 states that for the NEPA process to be effective, it must be integrated with other Army project planning at the earliest possible time. This will ensure that Army planning and decision-making reflects environmental values; the goals of safeguarding the environment and minimizing adverse environmental effects are achieved; and delays and potential conflicts later in the decision-making and implementing processes are avoided. The regulation contains information concerning actions that require environmental evaluation; environmental review categories; determining appropriate environmental documentation; integrating environmental reviews concurrently with other Army planning and decision-making actions; identifying mitigation measures and monitoring systems; proper use of listed categorical exclusions (CXs) and procedures for amending the list; describes the environmental assessment (EA) and environmental impact statement (EIS) procedures; and describes the method of obtaining public involvement in the environmental decision-making process.

Environmental Noise

- AR 200-1, *Environmental Protection and Enhancement*. Chapter 7 of this AR, *Environmental Noise Abatement Program*, outlines the requirements for compliance with Federal laws and regulations on the control and abatement of environmental noise. These requirements include assessment of the impact of noise produced by proposed Army actions and maintenance of an active Installation Compatible-Use Zone (ICUZ) program.

The IRP

- AR 200-1, *Environmental Protection and Enhancement*. Chapter 9, *Environmental Restoration Program*, implements the remedial response aspect of CERCLA, as amended by SARA. It provides guidance for the management of the Army IRP and FUDS program. It details the procedures and the required documents necessary at each stage of the remedial process, from the Preliminary Assessment/Site Inventory (PA/SI), through the Remedial Investigation/ Feasibility Study (RI/FS), to the Remedial Action (RA).
- AR 200-2, *Environmental Effects of Army Actions*. This AR defines Army policy relative to compliance with the NEPA when projects are undertaken pursuant to the requirements of CERCLA/SARA. Basically, this section outlines the required environmental records to be completed during the course of a remedial action under CERCLA, from identification through completion. Other chapters in AR 200-2 give detailed information on preparing the following documents: EAs, EISs, CXs, Findings of No Significant Impact (FNSIs), Notices of Intent (NOIs), and Records of Decision (RODs).

Pollution Prevention

- Headquarters, Department of the Army (HQDA) Letter 200,94-1, *Army Pollution Prevention Program*. This letter establishes policies and assigns responsibilities within the Army for the management of the Army Pollution Prevention Program. The letter expires 19 January 1996.

Environmental Program Management

- AR 200-1, *Environmental Protection and Enhancement*. This AR briefly outlines the RCS 1383 procedure. The Office of Director, Environmental Programs sends detailed technical guidance to the Major Army Commands (MACOMs) for the collection and processing of information required for the report. Installation commanders are responsible for ensuring that their RCS 1383 reports are prepared jointly by the installation's environmental staffs and resource managers. AR 200-1 also briefly discusses the RCS 1485 Report. Installations submit input via Army Compliance Tracking System (ACTS) rollup into the Defense Environmental Management Information System (DEMIS) Report.

B. Department of Defense (DOD) Directives and Instructions

Environmental Impacts

- All applicable directives and instructions have previously been implemented by ARs.

Environmental Noise

- All applicable directives and instructions have previously been implemented by ARs.

IRP

- All applicable directives and instructions have previously been implemented by ARs.

Pollution Prevention

- Secretary of Defense Memorandum, *Comprehensive Pollution Prevention Strategy*. This memorandum, dated 11 August 1994 outlines the strategy for incorporation of the requirements of EO 12856, 12873, and 12902.

Program Management

- All applicable directives and instructions have previously been implemented by ARs.

C. Using the TEAM Guide for ECAS

Environmental Impacts

- Findings with an AR citation that are related to NEPA should be classified as Class I findings.

Environmental Noise

- No additional instructions.

IRP

- Contact the AEC site manager or site project manager.

Pollution Prevention

- The RCRA Hazardous Waste Minimization plan may be incorporated into the Pollution Prevention Plan.

Program Management

- In addition to the checklist items in section O5, Program Management, assessors of this media should assess the installation's environmental program using the Phase 3, *Protocol for Conducting Environmental Management assessments of Federal Facilities/Organization*, taken from the new USEPA Generic Protocol for Federal Facilities published March 1995. This excerpt is provided in Appendix 6-1.

While not written specifically for military organizations, this protocol should prove to be very helpful in assessing management systems at the installation. Using this excerpt s planned as an interim measure. We would like to incorporate these sections and items which assessors find useful and ask that user's provide comments to USAEC.

Any findings based upon the USEPA excerpt are to be written under checklist item O5.2 which is our standard management system item. This criteria or standard used as the basis of the finding should be entered and explained in the Finding Comment field in the ECAS software.

D. Key Army/DOD Compliance Requirements

Environmental Impacts

- NEPA Process - Installations are required to perform various environmental surveys and assessments whenever an action is contemplated that could have an effect on the environment. Actions may not be taking place on the installation being assessed, but if the proponent is there it should be a review item.

Environmental Noise

- ICUZ Noise Contour Maps - Up-to-date noise zone maps for the installation's current and long range peacetime capabilities are completed.
- ICUZ Study - Initial and followup ICUZ studies have been conducted.
- ICUZ Coordination - Explained and provided technical assistance to local, regional, and state planning agencies.
- Noise Mitigation - Identify noise sources that create impact and mitigate when possible.
- ICUZ Committee - Established an ICUZ committee.
- Operational Data - Maintain a log of range and aircraft operational data.
- ICUZ Point-of-Contact (POC) - Designated an installation single POC for noise complaints.

IRP Program Management

- Program Objectives - The objectives of the IRP are to identify, mitigate, investigate, cleanup, and closeout IRP sites.

Pollution Prevention

- Pollution Prevention Plan - Installations are requires to have a written Pollution Prevention Plan by 31 December 1995 that details how they are going to meet the 50 percent reduction goal.

- Procurement - Installations are required to follow affirmative procurement procedures in order minimize waste. Paper products that are purchased are required to have a percentage of their content come from recycled materials.
- Hazardous and Toxic Substances Inventory - Installations are required to have an inventory of their hazardous and toxic substances which indicates the location of the substances.

Environmental Program Management

- Environmental Pollution Prevention Control and Abatement Report, RCS 1383 Report - The RCS 1383 Report is required for all Army installations.
- RCS 1485, *Report/Army Compliance Tracking System (ACTS)* - RCS 1485 input is required for all installations via ACTS input submissions.

E. Key Compliance Personnel

Environmental Impacts

- Installation, activity, and unit commanders (Installation Commanders (ICs)) will:
 1. monitor proposed actions and programs within their commands
 2. task the appropriate component with preparation of EAs and EISs and development of public involvement
 3. assure that appropriate environmental documentation is prepared and forwarded to the proponent decision-maker(s)
 4. initiate the preparation of necessary environmental documentation and assess the environmental consequences of proposed programs and projects
 5. coordinate appropriate environmental documents and public affairs initiatives with HQDA agencies and the Army Environmental Coordinator
 6. assist in the review of environmental documents prepared by DOD and other Army or Federal agencies, as requested.

Environmental Noise

- ICUZ Committee - Each installation shall have an ICUZ committee. Membership should include as a minimum, representatives from the IC; environmental management; master planning; Public Affairs Office (PAO); Staff Judge Advocate (SJA); and plans, operations, and training (range control and airfield operations). The ICUZ committee shall be responsible for reviewing complaints; investigating and recommending mitigative actions; coordinating with the public as necessary; assessing installation activities for potential noise impacts; monitoring land development plans, programs, and projects in areas adjacent to the installation; and reviewing development of onpost facilities.

(NOTE: The functions of the ICUZ committee may be incorporated into the Environmental Quality Control Committee (EQCC).)

IRP

- ICs will:
 1. monitor proposed actions and programs within their commands
 2. task the appropriate staff with preparation of EAs and EISs and development of public involvement
 3. assure that appropriate environmental documentation is prepared and forwarded to the appropriate proponent
 4. initiate the preparation of necessary environmental documentation and assess the environmental consequences of proposed programs and projects
 5. coordinate appropriate environmental documents and public affairs initiatives with MACOM, HQDA agencies, the Army Environmental Office, and state and Federal regulatory agencies
 6. assist in the review of environmental documents prepared by the DOD and other Army or Federal agencies, as requested
 7. be responsible for all IRP projects on the installation
 8. ensure that proposals for real property transaction concerning installations included in the IRP will be immediately reported through channels to HQDA (ENVR-E)
 9. assign an on-scene coordinator/remedial project manager (OSC/RPM) for all ongoing IRP projects on the installation.
- The OSC/RPM will act as the IC's representative on all IRP matters and perform the duties described in 40 CFR 300.33(b). The OSC/RPM will also:
 1. coordinate with the MACOM for Army National Guard (ARNG), National Guard Bureau; for U.S. Army Reserves (USAR), MUSARCs, U.S. Army Environmental Center (USAEC), and the Corps of Engineers:
 - a. on all proposals for removal and remedial action
 - b. on the installation's POC for regulatory agencies
 - c. on monitoring the activities of contractors as requested
 - d. on reviewing, and comment on draft reports prepared by USAEC or the Corps of Engineers on IRP activities
 - d. on reviewing response plans and recommendations for IRP response actions and proposed future actions
 - e. ensuring that currently operating facilities are not and do not become sources of hazardous materials contamination
 - f. ensuring that USEPA, state, regional, and local officials have adequate opportunity for timely review and comment on proposed activities, establishing a technical review committee (TRC) per AR 200-1, para 9-10, developing, implementing and maintaining a community relations program for IRP activities that meets all regulatory guidelines
 - g. establish an administrative record of the installation that is included or proposed for inclusion on the National Priorities List (NPL).
- The USEPA will establish and recommend sites for inclusion on the NPL.
- The PAO will establish the necessary supporting Public Awareness Program(s).

Pollution Prevention

- Installations, activities, and unit commanders (ICs) will:
 1. establish baseline data for total toxic releases so that the baseline year for future reductions is no later than Calendar Year 1994 and comply with *Emergency Planning and Community Right-to-Know Act* (EPCRA) and *Pollution Prevention Act* reporting requirements
 2. establish or modify management infrastructures to ensure adequate focus of management and budget is applied and Army pollution prevention goals and objectives are achieved
 3. prepare a pollution prevention plan for the installation and MACOM level
 4. assist in the conduct of comprehensive, multi-media pollution prevention planning efforts for all installations within a command
 5. program for, and subsequently implement, pollution prevention technology developed through the RDT&E program
 6. report annually to the next highest headquarters on the status of pollution prevention programs, including new programs implemented and new technologies introduced
 7. budget and execute a pollution prevention program through incorporation into the RCS 1383 Report and the Programming, Planning, Budget, and Execution System (PPBES)
 8. ensure that pollution prevention is added to unit, installation, and MACOM Mission Essential Task Lists (METLs)
 9. ensure/conduct pollution preventing training of personnel.

Environmental Program Management

- Installation, activity, and unit commanders (ICs) will:
 1. be actively involved and maintain awareness of environmental programs, activities, critical issues, enforcement actions, RCS 1383 and 1485 submissions, environmental section of the installation budget request, environmental entries and results and updates of the ECAS reports (assessment reports and corrective action management plan)
 2. ensure other Directorates, tenant activities and unit commanders cooperate with the DPW and/or environmental officer on environmental responsibilities
 3. conduct and followup ECAS assessments.
- DPW will:
 1. ensure environmental projects are incorporated in the Annual Work Plan (AWP)
 2. prepare and provide input on environmental requirements in the installation budget request/
 3. prepare the RCS 1383 and 1485 Report
 4. provide input to the RCS 1485 DEMIS report via ACTS
 5. provide copies of enforcement actions from regulatory agencies to respective MACOM.
- PAO will establish the necessary support to DPW and interface with public, to include maintaining the Public Affairs Plan.
- Safety Office will provide required support for management of hazardous materials (i.e., worker protection guidance, inspecting assistance).
- Preventative Medicine Office will:
 1. provide required respiratory and protective support, conduct, and maintain baseline medical surveys
 2. provide Quality Assurance/Quality Control (QA/QC) on management of pathological wastes.

- Director of Logistics (DOL) will be responsible for compliance and QA/QC on the Used Solvent Elimination (USE) Program, petroleum, oil, and lubricant (POL) management (new and used materials), hazardous materials tracking to include material safety data sheets (MSDSs), and environmental controls. oversight of maintenance, transportation, and ammunition storage activities.
- Civilian Personnel Office (CPO) will:
 1. provide personnel support regarding classification, recruitment, and placement
 2. provide support in obtaining required environmental training.
- Director of Resource Management (DRM) will:
 1. review budget input and ensure environmental requirements are properly considered
 2. provide support and guidance to manpower survey/Schedule X activity in establishing and maintaining required staffing.

F. Key Army/DOD Compliance Definitions

- *A-Weighted Sound Level* - the A-weighted sound level is a quantity, in decibels, read from a sound level meter with A-weighting circuitry. The A-scale weighted discriminates against the lower frequencies according to a relationship approximating the auditory sensitivity of the human ear (AR 200-1, Section II).
- *C-Weighted Sound Level* - a quantity, in decibels, read from a sound level meter with C-weighting circuitry. The C-scale incorporates slight de-emphasis of the low and high frequency portion of the audible spectrum. The C-weighted sound level measures the additional annoyance caused by the low frequency vibrations of structures (AR 200-1, Glossary, Section II).
- *Class I* - includes projects required to meet the provisions of assigned compliance agreement or consent order; projects required to correct deficiencies found on an USEPA or state inspection; other projects needed to come into compliance when statutory/regulatory deadlines have passed.
- *Class II* - includes those projects needed to meet future compliance deadlines for which planning must have already started.
- *Class III* - includes all other projects which while important are not related to imminent compliance requirements.
- *Compliance Status* - a four letter code identifying the current compliance status of the pollution source for which a project is being funded.
 1. CMPA, Compliance Agreement: Required to meet conditions of a signed Federal Facility Compliance Agreement, Consent Order or equivalent state or local enforcement action. Project Assessment value: HIGH
 2. INOV, Inspection/Notice of Violation: Required to meet deficiencies found on inspection by regulatory authority or cited in an NOV or equivalent. Project Assessment value: HIGH
 3. ESDP, Established Standard, Deadline Passed: Does not meet established standard and compliance deadline has passed. Project Assessment value: HIGH
 4. ESDF, Established Standard, Deadline Future: Does not meet established standard and compliance deadline is in the future
 5. PSDF, Pending Standard, Deadline Future: Does not meet pending standard and compliance deadline is in the future

6. ESRO, Established Standard, Replacement for Obsolescence: Meets established standard but needs replacement due to need or obsolescence
 7. ESRE, Established Standard, Replacement for Expansion: Meets established standard but needs replacement due to need for expansion
 8. ESDL, Established Standard, Demonstrates Leadership: Meets established standard but needs to demonstrate leadership
 9. OTHR, Other. Projects which don't fit any of the above categories.
- *dBA* - Sound level in decibels, measured using the A-weighting network of a sound level meter (AR 200-1, Section II).
 - *dB* - Sound level in decibels, measured using the C-weighting network of a sound level meter (AR 200-1, Section II).
 - *Decibel (dB)* - A unit of measurement of sound pressure level (AR 200-1, Section II).
 - *Defense Environmental Restoration Account (DERA)* - the DOD funding program for the IRP (AR 200-1, para 9-4).
 - *Environmental Agreement* - includes, but is not limited to, consent orders, consent agreements, compliance agreements, memorandum of agreement, memorandum of understanding, Interagency Agreements (IAGs), Federal Facility Compliance Agreements (FFCAs) (AR 200-1, para 12-6b).
 - *Environmental Monitoring Report (Optional)* - an optional but recommended report prepared at one or more point after program or action execution. Its purpose is to determine the accuracy of impact predictions, and it can serve as the basis for adjustments in mitigation programs and to adjust impact predictions in future projects (AR 200-2, para 3-2c).
 - *Environmental Noise* - the outdoor noise environment consisting of the noise, including ambient noise, from all sources that extends beyond the workplace. The noise environment of the workplace is not considered environmental noise (AR 200-1, Section II).
 - *Environmental Planning Guide (Optional)* - a document prepared before or at the outset of a major program concept exploration. Its use is optional but encouraged. A concise document intended for use by the program planners and designers, it provides guidelines and supporting rationale by which planners and designers could prevent, avoid, or minimize adverse environmental effect through environmentally sensitive design and planning. It can be made to be a requirement of contractors (AR 200-2, para 3-2a).
 - *Environmental Planning Record (Optional)* - this is an optional but recommended document that records the progress and a process of environmental considerations throughout a given program's development. It may be a journal with periodic entries, a file of memoranda, trip reports, and so forth. It is designed to be a visible track record of how environmental factors have actually been considered and incorporated throughout the planning process. It can be made a requirement of contractors (AR 200-2, para 3-2b).
 - *Feasibility Study* - within the IRP (or CERCLA), the means for development, evaluation, selection, and description of remedial action alternatives (AR 200-1, para 9-7f(2)).

- *Final Environmental Impact Statement (FEIS)* - this document is the result of the analysis of comments concerning the preliminary draft environmental impact statement (PDEIS). Comments are to be received from: designated Federal, state, and local agencies; any agency that has requested copies of impact statements; and the public (including interested or affected persons and organizations) (AR 200-2, para 6-5g).
- *ICUZ* - a land use planning procedure employed to control environmental noise (AR 200-1, Section II).
- *Life Cycle Environmental Document (LCED)* - a programmatic assessment addressing the known and reasonably foreseeable environmental impacts of a proposed item/system during all phases of development, production, use, and disposal. It may be in the form of an EA or an EIS, and must be supplemented to address additional significant environmental impacts as conditions change. It is most frequently used within the materiel research, development, and acquisition community (AR 200-2, para 3-1f).
- *National Priorities List (NPL)* - the list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial response (AR 200-1, para 9-9).
- *Practicable* - capable of being used in accordance with applicable specifications, available at a reasonable price and within a reasonable time-frame, and with the maintenance of a satisfactory level of competition.
- *Preliminary Assessment Screening* - a compressed preliminary assessment used when certain real estate transactions are proposed.
- *Preliminary Draft Environmental Impact Statement (PDEIS)* - a document containing information obtained and decisions made during the scoping process (AR 200-2, para 6-5d(1)).
- *Procuring Agency* - all Federal agencies, or any state agency, or agency of a political subdivision of a state, that is using appropriated Federal funds for such procurement, or any person contracting with any such agency with respect to work performed under such a contract.
- *Record of Decision (ROD)* - this document is required after completion of an EIS. Generally, it is to: state what the decision was; identify all alternatives considered and specifying which alternative was environmentally preferable; and state whether all practicable means to avoid or minimize environmental harm from the selected alternative have been adopted and if not, why not. In addition, it states the monitoring and mitigation program adopted (if needed). It may also discuss preferences among alternatives based on nonenvironmental factors (economic and technological). The ROD is not considered an environmental document since the decision considers these other, nonenvironmental factors in addition to environmental factors (AR 200-2, para 6-5i).
- *Record of Environmental Consideration (REC)* - a document that describes the proposed action and anticipated timeframe, identifies the proponent, and explains why further environmental analysis and documentation is not required. It is a signed statement to be submitted with project documentation. Furthermore, it is used when the proposed action is exempt from the requirements of NEPA, or has been adequately assessed in existing documents and determined not to be environmentally significant. It is also used to document the use of those CXs that require such records (AR 200-2, para 3-1a).

- *Remedial Action (RA)* - the actual construction or implementation phase that follows the remedial design of the selected cleanup alternative at a site (AR 200-1, para 9-7f(6)).
- *Remedial Investigation (RI)* - the IRP-related or CERCLA-related process to determine the nature and extent of the problem posed by a release or threatened release (AR 200-1, para 9-7f(1)(c)).
- *Scoping* - this process occurs when the planning for an Army project or action indicates a need for the preparation of an EIS. Scoping determines the scope of issues to be addressed in the EIS and identifies the significant issues related to the proposed action. The parties identify the range of actions, alternatives, and impacts to consider in the EIS (AR 200-2, para 2-6d).
- *Site Inspection* - a technical phase, following a preliminary assessment, designed to collect more extensive information on a hazardous waste site. The information is used to score the site with the Hazard Ranking System to determine if response action is needed (AR 200-1, para 9-7f(1)).

G. Records To Review in Addition To Those Listed in TEAM Guide

- Complaint log from local community and the following documentation:
 - ICUZ committee charter
 - ICUZ reports and studies
 - ICUZ committee meeting minutes
 - ICUZ committee membership list
- Contour maps, if applicable
- RCS 1383 Report
- Troop Construction Projects
- Offpost actions (i.e., training, leases, maneuvers)
- Command Operating Budget (COB)
- Unfinanced Requirements Report (UFR)
- 1485/DEMIS Report/ACTS
- Annual Work Plan (AWP)
- Installation Action Plan
- IR Workplan

H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide

- Test tracks
- Ranges
- Airfields, Heliports/Helipads
- Areas of noise/land use conflict
- Vehicle motor parks
- Rock quarry operations
- Fire training pits

I. People To Interview

- Directorate of Public Works (DPW)
- Environmental Coordinator (EC)
- Fire Department

- Engineering, Plans, Training, Mobilization, and Security (DPTMSEC)
- Public Affairs Office (PAO)
- Range Control (DPTMSEC)
- Aviation Command (DPTMSEC)
- Staff Judge Advocate
- Master Planner (DPW)
- Budget
- Safety
- Action Proponent
- Engineering, Plans, and Services (EP&S)
- Inspector General (IG)
- Directorate of Personnel and Community Activities (DPCA)
- Director of Resource Management (DRM)
- Civilian Personnel Office (CPO)
- Directorate of Plans, Training, and Mobilization (DPTM)
- Director of Logistics (DOL)

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: May 1995
THE NEPA PROCESS	
O1.5 Documentation	
O1.5.1.A. All potentially affected parties, including the public, will be involved, when practicable, in the development of environmental documentation (AR 200-2, para 7-1).	<p>Determine if the need for public involvement is being met in the following manner:</p> <ul style="list-style-type: none"> - the development of a plan to include all affected parties - public involvement as a part of the scoping process when an EIS is being prepared - public involvement when appropriate in the development of EAs. <p>Verify that, when necessary, the following persons and agencies are contacted:</p> <ul style="list-style-type: none"> - municipal, township, and county elected and appointed officials - state, county and local government officials and administrative personnel whose official responsibilities include responsibility for activities or components of the affected environment related to the proposed action - local and regional administrators of other Federal agencies or commissions that may control resources potentially affected by the proposed action - members of identifiable population segments within the potentially affected environment - members and officials of those identifiable interest groups of local or national scope that may have interest in the environmental effects of the proposed action or activity - any person or group that has specifically requested involvement.
O1.5.2.A. Army units are required to integrate environmental review concurrently with other planning and decision-making actions (AR 200-2, para 2-6a).	<p>Verify that installation organizations have developed some method to ensure they consult with EC to determine environmental review and documentation requirements for actions they plan or perform.</p> <p>Verify that action proponents have documented compliance with environmental review requirements for actions they plan or perform.</p>

COMPLIANCE CATEGORY:

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:
May 1995

O1.5.3.A. CXs may apply to proposed actions, exempting them from further environmental assessment under specific circumstances (AR 200-2, para 4-1 through 4-4 and Appendix A).

Verify that prior to using a CX the following actions were taken:

- it was determined that the action appropriately fit one of the CXs listed in Appendix 6-2
- it was determined whether or not there were any extraordinary circumstances that might result in the proposed
- action having an impact on the human environment that would require an EA or EIS including:
 - greater scope or size than normally experienced for a particular category of action
 - potential for degradation of already existing poor environmental conditions
 - employment of unproven technology
 - presence of threatened or endangered species and their habitats, archaeological materials, historical places, or other protected resources
 - use of hazardous or toxic substances that may come in contact with the surrounding natural environment
 - proposed actions affecting areas of critical environmental concern
- it was determined that the answer to all the screening questions is Section II of Appendix A of 200-2 was yes (see Appendix 6-2).

Verify that record copies of RECs are available for any projects in which a CX was used. A REC is required according to the listing in Appendix A of AR 200-2 (see Appendix 6-2).

**COMPLIANCE CATEGORY:

U.S. TEAM Guide: Active Army Supplement**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: May 1995
<p>O1.5.4.A. Certain actions require the preparation of an EA (AR 200-2, para 5-2 and 5-3).</p>	<p>Verify that an EA is prepared for the following actions:</p> <ul style="list-style-type: none"> - special training or test activity not included in the annual installation training cycle - military construction, including offpost construction - installation pesticide, fungicide, herbicide, insecticide, and rodenticide use programs - changes to established installation land use that may cause environmental impacts - proposed changes in doctrine or policy that may have a potential environmental impact - repair or alteration projects affecting historically significant structures, archaeological sites, or places on, or meeting the criteria for nomination to, the National Register of Historic Places - acquisition, or alteration of a laboratory that will use hazardous chemicals, drugs, or biological or radioactive materials - actions that could potentially cause soil erosion, affect prime or unique farmland, wetlands, floodplains, coastal zones, wilderness areas, aquifers, or other water supplies, or wild and scenic rivers - new weapon systems development and acquisition, in all phases - development of the installation master plan - development of natural resource management plans - proposals that may lead to the excessing of Army real property - actions that take place in, or adversely affect, wildlife refuges - proposals for energy conservation through forest harvest - field activities on land not controlled by the military (including firing over navigable waters, firing 215 m aboveground, and joint air attack training greater than 250 knots and below 3000 ft above ground level) - any action with local or regional effects on energy availability - an activity that affects species on or proposed for the U.S. Fish and Wildlife Service (FWS) list of Threatened or Endangered Species, or state equivalents - production of hazardous or toxic materials - installation restoration projects - operations and maintenance/Army National Guard (ARNG) projects (to include U.S. Army Reserve activities) that will affect environmental quality - site specific deployment of life cycle systems meeting the threshold criteria for requiring an EA - special field training exercises or test activities off Army or DOD property that extend into national airspace (45 m (148 ft)) above ground level) - changes to established airspace use that affects the environment or socioeconomic systems, or creates a hazard to nonparticipants - any other action with the potential for cumulative impact on environmental quality when combining effects of other actions or when the action is of a lengthy duration, a violation of pollution abatement standards, or harmful to culturally or ecologically sensitive areas.

COMPLIANCE CATEGORY: OTHER ENVIRONMENTAL ISSUES U.S. TEAM Guide: Active Army Supplement	
REGULATORY REQUIREMENTS:	REVIEWER CHECKS: May 1995
O1.5.4.A. (continued)	<p>(NOTE: An EA is not required if the installation has already decided to prepare an EIS.)</p> <p>Verify that installation proponents have received notice of the types of actions they plan or perform which may be likely to require EAs, and that they may be required to perform or fund mitigations committed to in such EAs.</p> <p>Verify that offices responsible for performing mitigation to which the installation has committed in an EA/FNSI, but that did not participate in EA/FNSI development, have received notice of such commitments and are performing or have performed the mitigations.</p>
O1.5.5.A. EAs are required to contain specific information (AR 200-2, para 5-4a).	<p>Verify that EAs contain the following information:</p> <ul style="list-style-type: none"> - purpose and need for the proposed action - description of the proposed action - the alternatives considered, including no action - affected environment (baseline conditions) - environmental consequences of the proposed action, and the alternatives - listing of agencies and persons consulted - the conclusion, or finding, on whether the environmental impacts are significant.
O1.5.6.A. All EAs must prompt either the preparation of an FNSI, or an NOI to file an EIS (AR 200-2, para 5-5).	<p>Determine whether all EAs for projects (that have not been cancelled or delayed) are accompanied by an FNSI or have been followed by an NOI.</p>
O1.5.7.A. Existing EAs are required to be reviewed periodically as the action continues (AR 200-2, para 5-8).	<p>Verify that existing EAs are covering actions still in progress are reviewed to verify that the setting, actions, and effects described remain substantially accurate.</p>

**COMPLIANCE CATEGORY:
OTHER ENVIRONMENTAL ISSUES
U.S. TEAM Guide: Active Army Supplement**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: May 1995
<p>O1.5.8.A. The EA, the FNSI, and all other appropriate planning documents will be provided to the appropriate decisionmaker for review and consideration. The signature page for the EA and the FNSI package will be signed by the appropriate decisionmaker to indicate his or her review and approval (AR 200-2, para 5-4b).</p>	<p>Verify that the decisionmaker(s) for the proposed action has (have) signed and approved both the EA and the FNSI, or a complete package including the EA plus FNSI.</p>
<p>O1.5.9.A. FNSIs with national interest will be made available to the public prior to initiation of the proposed action, unless excluded on a security basis, according to specific parameters (AR 200-2, para 2-6b and 5-5c).</p>	<p>Verify that FNSIs that have national interest are submitted with the proposed press release through command channels to Deputy Assistant Secretary for the Army Environment, Safety, and Occupational Health (DASA ESOH) for approval and subsequent publication in the Federal Register.</p> <p>Verify that FNSIs with national interest are coordinated with the Office of the Chief of Public Affairs (OCPA).</p> <p>Verify that local publication of the FNSI does not precede publication in the Federal Register.</p>
<p>O1.5.10.A. For actions of local or regional interest, the FNSI will be publicized according to specific parameters (AR 200-2, para 2-6b and para 5-5d).</p>	<p>Verify that the following are notified of FNSIs:</p> <ul style="list-style-type: none"> - state and areawide clearinghouses - Indian tribes when effects may occur on reservations - local newspapers - other local media - potentially interested community organizations including small business associations - newsletters that may be expected to reach potentially interested persons - owners and occupants of nearby housing (by direct mail).

**COMPLIANCE CATEGORY:
OTHER ENVIRONMENTAL ISSUES
U.S. TEAM Guide: Active Army Supplement**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: May 1995
<p>O1.5.11.A. EAs and FNSIs are required to be made available for review and comment according to specific time schedules (AR 200-2, para 2-6b and para 5-5d).</p>	<p>Verify that if the proposed action is one of national concern, is unprecedented, or normally requires an EIS, the EA or FNSI is made available for public review 30 or more days prior to the final decision.</p> <p>Verify that if the proposed action is one of national concern, is unprecedented, or normally requires an EIS, there is a 30 day public comment period between the time that the FNSI is publicized and the time the proposed action begins.</p> <p>(NOTE: The public comment period may be shortened with MACOM approval.)</p>
<p>O1.5.12.A. Installations are required to implement mitigation and/or other considerations established in the EA or FNSI (AR 200-2, para 2-7a and para 2-7d).</p>	<p>Verify that mitigation and other conditions established in the EA or FNSI or during their review and commitment as a part of the record of decision are implemented.</p>
<p>O1.5.13.A. A proponent of an action must produce an EIS if certain conditions exist due to a proposed action (AR 200-2, para 6-2 and para 6-3).</p>	<p>Verify that the installation has prepared EISs for proposed actions that have the potential to:</p> <ul style="list-style-type: none"> - significantly affect environmental quality or public health or safety - significantly affect historic or archaeological resources, public parks and recreation areas, wildlife refuges or wilderness areas, wild and scenic rivers, or aquifers - have significant adverse effect on properties listed or meeting the criteria for listing in the National Register of Historic Places, or the National Registry of Natural Landmarks - cause a significant impact to prime and unique farm lands, wetlands, floodplains, coastal zones, or ecologically or culturally important areas or other areas of unique or critical environmental concern - result in potentially significant and uncertain environmental effects or unique or unknown environmental risks - significantly affect a species or habitat listed or proposed for listing on the Federal list of endangered or threatened species - either establish a precedent for future action or represent a decision in principle about a future consideration with significant environmental effects - adversely interact with other activities with individually insignificant effects so that cumulatively significant environmental effects result - involves the production, storage, transportation, use, treatment, and disposal of hazardous or toxic materials that may have significant environmental impact.

**COMPLIANCE CATEGORY:
OTHER ENVIRONMENTAL ISSUES
U.S. TEAM Guide: Active Army Supplement**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: May 1995
O1.5.13.A. (continued)	<p>Verify that an EIS has been prepared for the following actions which normally require an EIS:</p> <ul style="list-style-type: none"> - significant expansion of a military facility, such as a depot, munition plant, or major training installation - construction of facilities that have a significant effect on wetlands, coastal zones, or other areas of critical environmental concern - the disposal of nuclear materials, munitions, explosives, industrial and military chemicals, and other hazardous or toxic substances that have the potential to cause significant environmental impact - the life cycle development of new materials such as weapons systems that require the construction and operation of new fixed facilities or the significant commitment of natural resources - land acquisition, leasing or other actions that may lead to significant changes in land use - Continental United States (CONUS) realignment or stationing of a brigade or larger table of organization and equipment unit during peacetime - training exercises conducted outside the boundaries of an existing military reservation where significant environmental damage might occur - major changes in mission of facilities either affecting areas or critical environmental concern or causing potentially significant environmental impact.
<p>O1.5.14.A. Public interaction in the EIS process through scoping must be done according to specific procedures (AR 200-2, para 7-2 through 7-5).</p>	<p>Verify that, in the preliminary phase of scoping, the following actions are done:</p> <ul style="list-style-type: none"> - the significant issues to be analyzed are incorporated in the NOI - the office or person responsible for matters related to the scoping process is identified in the NOI - the method by which the installation will invite participation of affected parties is identified and a tentative list created - the proposed method of accomplishing scoping is identified - a relationship is initiated between the timing of the preparation of the environmental analysis and the tentative planning and decisionmaking schedule - any exemptions are identified in the NOI. <p>Verify that, in the public interaction phase of scoping, the following actions are taken:</p> <ul style="list-style-type: none"> - comments are solicited from all affected parties and respondents to the NOI - comments are solicited from technical representatives at the installation - comments are solicited from one or more representatives from any Army-contracted consulting firm if one has been retained to participate in writing the EIS or providing reports - comments are solicited from experts in various environmental disciplines.

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: May 1995
O1.5.14.A. (continued)	<p>Verify that all scoping participants are provided with the information developed during the preliminary phase and as much of the following as may be available:</p> <ul style="list-style-type: none"> - a brief description of the environment at the affected location - a description of the proposed alternatives - a tentative identification of any public EAs and other EISs that are being or will be prepared that are related but are not a part of the scope of impact - any additional scoping issues or limitation on the EIS - the lead and cooperating agencies are identified.
O1.5.15.A. A copy of the signed ROD must be forwarded to the Office, Director of Environmental Programs (AR 200-2, para 3-1g and 6-5).	<p>Verify that a copy of the signed ROD has been forwarded to the Office, Director of Environmental Programs.</p>
O1.5.16.A. Specific records must be maintained in certain circumstances (AR 200-2, para 3-1).	<p>Verify that the following documents, including all of supporting documentation properly considered part of the administrative record for such documents, are maintained:</p> <ul style="list-style-type: none"> - REC - EA - FNSI - NOI - EIS - LCED - ROD.
	<p>Verify that LCEDs prepared elsewhere are included as part of EA/EIS packages for items or systems being developed, tested, produced, or fielded at the installation.</p>
	<p>Verify that mitigation/monitoring records are maintained and kept current.</p>

**COMPLIANCE CATEGORY:
OTHER ENVIRONMENTAL ISSUES
U.S. TEAM Guide: Active Army Supplement**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: May 1995
<p>O1.5.17.A. The proponent, or other appropriate agency, will implement mitigation and other conditions established in the EA or EIS or during its review, and committed as part of the FNSI or the ROD (AR 200-2, para 2-7a through 2-7c, 2-7d(3), 6-5l, and 6-5m).</p>	<p>Verify the following:</p> <ul style="list-style-type: none"> - funds have been committed to perform commitments made in FNSI or ROD and mitigations adopted in EAs/EISs are actually being performed, or, if not, that EAs/EISs are revised and reissued for public comment to reflect the difference - if necessary, pending or ongoing actions are delayed to accommodate decision-maker, EC, and legal review and renotification of the public - a monitoring and enforcement program is adopted and summarized in the ROD if appropriate or applicable.
<p>O1.5.18.A. Legal documents implementing the action (contracts, permits, grants, etc.), will specify mitigation measures to be performed (AR 200-2, para 2-7d).</p>	<p>Review legal documents supporting the action and verify that mitigations are included as appropriate, including contractor penalties in suitable circumstances.</p>
<p>O1.5.19.A. The LCED must address known and reasonable foreseeable environmental impacts of proposed programs/systems during all phases (AR 200-2, para 3-1(f)).</p>	<p>Review environmental documentation for known and foreseeable environmental impacts during all phases of proposed programs/systems to include development, production, use, and ultimate disposal.</p>

O5.5.4.A. Environmental compliance agreements (i.e., consent orders, MOAs, MOUs, FFCAs, etc.) will be prepared according to regulation (AR 200-1, para 12-6c through 12-6e).

Verify that draft environmental agreements contain:

- procedures for schedule modification and dispute resolution
- provisions for reimbursement to state governments for oversight expenditures in relation to the Army activity subject to the agreement
- language prescribed by the DA for agreements relating to CERCLA, and prepared for installations included on or proposed for inclusion on the NPL under CERCLA.

Verify that, in cases where fines are being issued, installations use supplemental environmental projects (SEPs) to reduce fines.

Verify that draft environmental compliance agreements are forwarded through MACOM to HQDA (DAJA-EL) WASH DC 20310-2210, for review and coordination. Draft agreements must be accompanied by:

- a brief description of the problem, the proposed action, and the parties to the agreement
- a map delineating the location of each site addressed in the agreement
- a funding plan that would ensure that the compliance schedule could be met.

Verify that public review and comment is provided for according to the requirements of NEPA, CERCLA, or other relevant Federal/state laws, where applicable.

O5.5.5.A. Installations should monitor and uphold the conditions/requirements of environmental agreements (i.e., timber, land/water use, recreational use permits, etc.) developed with Federal, state, or local agencies (MP).

Verify that the installations monitors and upholds the conditions/requirements of environmental agreements developed with Federal, state, or local agencies.

- Section 40 Environmental Planning and Risk Management

Appendix - Selecting Individuals to Interview and Documents to Review for Environmental Management Assessments

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Introduction

A. Purpose

The primary purpose of Environmental Management Systems Assessment is to provide the Federal facility concise information pertaining to:

- Strengths and weaknesses of environmental management systems and programs at Federal facilities;
- Adherence with Best Management Practices pertaining to environmental management systems and programs;
- Compliance with Federal agency's policies which address environmental management systems and programs;
- Identification of underlying causal factors contributing to the occurrence of observed compliance deficiencies; and
- Noteworthy environmental management practices.

These assessments are also intended to provide Federal facilities and contractors feedback on the effectiveness and benchmark performance of their environmental management systems and to identify opportunities for improvement.

Phase 3 reviews take a look at the "big picture" by assessing the overall functioning of established environmental management systems at a facility. This document divides Phase 3 protocols into the eight organizational disciplines listed below and attempts to provide assistance to the management of a facility when it seeks to understand and evaluate the systems which have been developed to manage and control environmental performance at a facility. In this review, the task of the assessor shifts from compliance auditor (Phase 1) and systems specific environmental discipline evaluator (Phase 2), to systems function evaluator of environmental performance at the facility.

B. Scope and Format

The scope of an Environmental Management Systems Assessment includes eight disciplines which are based on key characteristics and elements of effective environmental management systems. These eight disciplines are the following:

- Organizational Structure
- Environmental Commitment
- Environmental Protection Programs

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- Formality of Environmental Programs
- Internal and External Communication
- Staff Resources, Training, and Development
- Program Evaluation, Reporting, and Corrective Action
- Environmental Planning and Risk Management

(NOTE: Pollution prevention is dealt with comprehensively in each of the sections of Phase 2 as it pertains to those disciplines. Additionally, an overview has been provided as an Appendix to Phase 2.)

Each discipline is organized as follows:

- *Performance Objective:* This is a general statement of the overall objective to be met in each discipline.
- *Key Evaluative Concerns:* This section provides information on the major elements that will be evaluated in each discipline.
- *Criteria:* These are specific criteria that should be satisfied in order to meet the overall performance objective for each discipline. Each criteria is identified by a capital letter. The criteria within a discipline have been grouped and organized along the lines of the major elements identified in Key Evaluative Concerns.

The bullets under each criterion are intended to provide guidance to the assessor in evaluating that criterion; they are not intended to be subcriteria. Additional bullets or lines of inquiry may be appropriate depending on the specific organization being reviewed.

Many Federal facilities have tenant organizations, usually other Federal agencies, but also state and local agencies and private parties. Even though these tenant organizations may be responsible for environmental compliance of their activity, the facility owner may be ultimately held accountable by regulators should compliance problems persist or should future liabilities be discovered. These protocols can be used to address environmental compliance and management issues associated with tenant organizations. The agreements between the facility owner and the tenant organization need to clearly establish environmental responsibilities of both the facility owner and tenant organization and the mechanisms that the facility owner will utilize to monitor compliance, including application of these protocols to the tenant organizations.

Federal facilities must observe A-106 requirements. The A-106 planning process is a systematic methodology for identifying and prioritizing environmental requirements, and targeting resources necessary to address them. The process assists in establishing funding priorities for projects to meet statutory and regulatory requirements. Using a standardized format, Federal agencies must update their plans semi-annually and submit them to the EPA for review. EPA uses a computerized system (FEDPLAN-PC) to track these requirements from the time they are first identified until they are executed. The authority for the

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.
Management Systems Assessments

Phase 3 - Introduction

development of these plans and review by EPA is contained in E.O. 12088 and Office of Management and Budget (OMB) Circular A-106. The procedures for developing Federal agency environmental plans are discussed in detail in EPA's Federal Agency Environmental Management Program Planning Guidance document, dated October 1994.

C. Approach

In an assessment of facility wide environmental programs, the responsibility of the environmental management specialist is to assess these programs to determine whether they effectively meet the performance objectives and whether they have sufficient structure and formality to assure that activities are conducted in a manner that is consistent with environmental regulations and Federal agency policy.

The assessment is based on a combination of staff interviews and document reviews. Interviews are exceptionally important in conducting an Environmental Program Assessment. They provide the primary means of understanding the organizational relationships, roles and responsibilities, policies, and systems that form the framework for the management of environmental matters. More importantly, they often reveal differences in the actual versus the documented practices. Document review is important to verify the formality of the system and confirm interview information. Suggestions for the type of staff to interview and documents to review are provided in the appendix.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3

Section 33

Assessing Environmental Programs Organizational Structure

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Table of Contents

1. Performance Objective	33-1
2. Key Evaluative Concerns	33-1
3. Criteria	33-1
A. Management Organization	33-1
B. Roles and Responsibilities	33-3

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

1. Performance Objective

The structure of the organization being assessed should be such that environmental management functions are congruent and effectively integrated with other functions and processes. Roles, responsibilities, and accountabilities should be well defined and clearly communicated to effectively manage environmental issues. Authorities should be delegated to organizational levels that can ensure the effective implementation of environmental programs.

2. Key Evaluative Concerns

In this assessment discipline, the organization of the environmental management organization will be reviewed and evaluated. Important characteristics of an effective organizational structure include well defined roles and responsibilities, sufficient authorities, appropriate layers of management, effective reporting relationships, and congruence of the environmental management organization with the larger Federal agency organization.

3. Criteria

A. Management Organization

- 1) The organizational structure of the environmental management function is characterized by clear lines of authority and responsibility.
 - a. Review organizational charts, mission statements, and any other documentation of organizational design for the environmental management function.
 - b. Determine whether departmental missions and responsibilities related to environmental management are clearly defined and understood. Note any overlaps or conflicts of interest.
 - c. Determine which offices and individual(s) have authority and responsibility/accountability for various environmental management functions.
- 2) The environmental management function is organized in such a way that managers can be leveraged effectively, without being spread too thinly.
 - a. Determine the breadth and depth of responsibility of key environmental managers.
 - b. Determine whether environmental managers have too much responsibility to effectively carry out their jobs.
 - c. Determine whether environmental managers have too little responsibility to be cost effective to the organization.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- 3) Reporting relationships within the environmental management function are well defined, clearly communicated, and effectively integrated into the overall organizational structure.
 - a. Interview managers and environmental staff to understand these reporting relationships.
 - b. Determine where those relationships are defined and how they are communicated.
 - c. Evaluate whether actual reporting arrangements for environmental management (as determined through interviews) match those shown on existing organizational charts or on distribution lists. Note any differences.
 - d. Evaluate how well these reporting relationships and the environmental management organization fits in with the overall organization, e.g.,
 - centralization versus decentralization,
 - line versus matrix organizational structure.
- 4) Environmental managers are positioned high enough in the organization and have sufficient organizational stature, independence, and authority to effectively implement environmental programs and to make decisions related to environmental protection.
 - a. Understand the amount of authority given to environmental managers at different levels and determine if it is sufficient to carry out their responsibilities.
 - b. Understand the approval process and the level of approval necessary for specific actions or projects.
 - c. Identify who has stop-work authority and how quickly they can affect a necessary response.
 - d. Note how many reporting levels separate the organization's most senior manager and the person in charge of environmental matters.
 - e. Determine whether there are too many layers of management between these two positions (the organization's most senior management and the environmental professional).
 - f. Determine the effectiveness of communication between these two positions (the organization's most senior management and the environmental professional). (Linkage with Section 37).

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

5) The integrity and effectiveness of the organizational structure is periodically reviewed and revisions are made when warranted.

- a. Note how often it is reviewed and by whom.
- b. Understand the criteria used to evaluate organizational structure.
- c. Determine whether the organizational structure of the environmental management function has changed as a result of past reviews.

B. Roles and Responsibilities

(Linkage with Section 38)

- 1) Environmental roles and responsibilities are well defined, clearly communicated, and understood by all personnel whose activities may impact environmental performance.
 - a. Identify where and how these roles and responsibilities are defined, such as in program manuals or job descriptions.
 - b. Verify through interviews that individual jobs and responsibilities for environmental management match those in program plans and job descriptions.
 - c. Determine whether specific roles as required by Federal agency policy or Federal and state regulations have been assigned (e.g., NEPA Compliance Officer, Radiation Safety Officer).
 - d. Determine whether these roles and responsibilities are formally implemented.
 - e. Determine whether functional relationships between the environmental support group and the line units are formally defined and understood.
 - f. Review tenant/host agreement(s) to ensure environmental responsibilities are clearly defined between the tenant and the agreement holder (pg. 33-3).
- 2) Roles, responsibilities, and accountabilities are supported by management systems and documentation such as job descriptions, performance standards and performance appraisals.
 - a. Review job descriptions and performance standards for a sample of line management and operations staff to determine if appropriate environmental responsibilities are included.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- b. Review performance standards for select personnel (line managers and operations staff) to verify that environmental performance is a written criterion.
 - c. Determine, through interviews, whether performance appraisals appropriately measure environmental performance for both environmental staff and non-environmental staff.
- 3) Personnel responsible for environmental management are held accountable for their performance and the performance of those they manage.
- a. Determine if awards are available for environmental activities or actions.
- 4) A group independent of line management with responsibility for policy and standards development and oversight and technical support has been established. This group has the authority and management support to implement their responsibilities.
- a. Determine whether responsibilities of these support groups are clearly defined.
 - b. Identify who:
 - Establishes organization-wide environmental policy and standards;
 - provides environmental oversight of line organizations;
 - provides technical support for line organizations.
 - c. Determine how these environmental support groups fit into the overall organizational structure. Note the organizational placement of environmental support groups and whether they are independent of line management.
 - d. Determine whether these groups have appropriate levels of authority.
 - e. Determine if environmental managers have been successful in implementing past initiatives.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3

Section 34

Assessing Environmental Programs Environmental Commitment

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Table of Contents

1. Performance Objective	34-1
2. Key Evaluative Concerns	34-1
3. Criteria	34-1
A. Top Management Support	34-1
B. Environmental Policy	34-3
C. Line Management Support	34-4

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

1. Performance Objective

The organization should exhibit a commitment to environmental excellence demonstrated by top management support, line management accountability for environmental performance, and formal environmental policy.

2. Key Evaluative Concerns

The focus of this audit discipline is the commitment to environmental excellence exhibited throughout the organization -- from top management through line management and staff. Top management support is critical to ensure environmental excellence and is necessary to emphasize the importance of and commitment to the organization's environmental goals. Top management support is evaluated based on demonstration of commitment to environmental programs and performance.

The existence of overall and issue-specific environmental policies is essential to establish both a framework for and a direction to the organization's environmental expectations. The organization's environmental policy will be evaluated in terms of comprehensiveness, compliance with environmental requirements, and provisions for environmental excellence that go beyond regulatory requirements.

Finally, to achieve environmental excellence, all personnel must take personal responsibility for environmental performance. Line management's commitment is evaluated based on the sense of responsibility for environmental protection shown by managers and operating personnel at all levels and in all functions.

3. Criteria

A. Top Management Support

- 1) Top management clearly communicates its commitment to environmental protection through the issuance of formal statements and policies that explicitly state environmental goals and expectations, with full compliance as a minimum goal.
 - a. Determine whether top management's commitment to environmental protection has been stated in mission statements, annual reports, general environmental policy or other broadly disseminated materials.
 - b. Determine whether top management includes environmental protection in internal or external speeches.
- 2) Top management demonstrates its commitment to environmental excellence through personal and managerial actions.
 - a. Determine whether routine senior management meetings include discussion of environmental issues/programs.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- b. Determine if top management has supported environmental programs through sufficient allocation of resources (financial, technical) (Linkage with Section 38 & Section 40).
 - c. Identify personal actions that provide evidence of top management support, for example:
 - Initiation of environmental programs/projects;
 - participation in professional associations;
 - work with local community organizations; and
 - participation in self-assessment reviews.
 - d. Determine whether senior management has a clear set of goals and expectations regarding environmental performance and what they are (e.g., environmental compliance as a minimum expectation, goals that go beyond compliance, emissions reductions, etc.).
 - e. Compare explicit goals to apparent implicit goals and identify any conflicting messages.
 - f. Identify how senior management communicates its environmental goals and expectations to employees and, typically, how frequently the goals are communicated.
- 3) Top management's commitment is demonstrated through required routine reporting regarding environmental performance and the status of environmental initiatives. (Linkage with Section 37)
- a. Determine what formal reports are routinely prepared for top management and to what extent they address the organization's environmental status or performance.
 - b. For these reports, identify to whom they are sent, the type of information conveyed, and the level of detail provided.
 - c. If environmental information is not included in routine management reports, investigate whether top management utilizes or relies upon any informal means for determining the organization's environmental status or performance. If yes, identify the means and how it works.
 - d. Check for any formal written requests from top management for information on environmental status or performance.
- 4) Senior managers have a basic understanding of and appreciation for environmental requirements relevant to the scope of the operations for which they are responsible.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- a. Through interviews, determine if senior managers understand general regulatory requirements, and have knowledge of internal environmental programs and responsibilities.
 - b. Determine what training or background these managers have related to environmental management.
- 5) Top management encourages openness and is receptive to input on environmental issues from all employees, as well as from the public at large. (Linkage with Section 37)
 - a. Identify mechanisms by which employee input has been encouraged and identify examples.
 - b. Seek evidence that employee input is considered in environmental decisionmaking.
 - c. Identify mechanisms by which public input has been encouraged and identify examples.
 - d. Determine whether public input is considered in environmental decisionmaking.
- 6) Top management has created a culture of compliance, awareness, teamwork, and line responsibility for environmental management.
 - a. Based on input from other members of the Assessment Team, determine if such a culture exists in the organization and how this culture was established.
 - b. Determine top management's role in encouraging or discouraging such a culture.

B. Environmental Policy

- 1) A formal environmental policy statement that has been issued from a high enough level of authority within the organization to communicate its importance.
 - a. Determine the existence of and review the organization's formal written statement of environmental policy.
 - b. Identify the individual and level within the organization from which the policy statement was issued.
- 2) Environmental compliance is formally established as the minimum acceptable standard.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- a. Review the environmental policy statement, and identify its principal environmental goals and objectives.
 - b. Determine whether the policy statement satisfies the Federal agency's goal of achieving environmental excellence.
 - c. Note whether implementation guidance or other supplemental, subsidiary statements clarify how the organization intends to meet its policy objectives.
- 3) The organization has established issue-specific policies for the major environmental issues consistent with the scope of its operations.
- a. Determine whether the organization has issued any additional, issue-specific policies addressing more focused environmental concerns, e.g., underground storage tanks, PCBs, groundwater protection, hazardous waste, air emissions, NEPA, etc.
 - b. Assess whether issue-specific policies are consistent with the overall environmental policy.
- 4) Environmental policies are widely distributed, easily accessible, and understood throughout the organization.
- a. Identify how environmental policies are communicated.
 - b. Based on interviews, determine the level of awareness and understanding of environmental policies.

C. Line Management Support

- 1) Individuals throughout the organization recognize the environmental aspects of their job responsibilities, and take personal responsibility for and demonstrate a sense of "ownership" of environmental protection.
- a. Determine line management's sense of personal responsibility for environmental performance.
 - b. Determine whether line operating personnel and functional personnel understand how their individual jobs affect the organization's environmental performance and whether they make any specific connections between the two.
 - c. Note specific instances which reveal management or staff attitudes or beliefs regarding the importance of their contribution to good environmental performance.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- d. Determine whether attitudes and behavior of management reinforce the message that line operating personnel are primarily responsible for ensuring good environmental performance.
 - e. Determine the organization's sense of the relative importance of the roles of operating personnel and environmental staff in determining environmental performance.
- 2) Managers at all levels have formally stated and demonstrated their commitment to environmental excellence.
- a. Identify and review managers' statements of this commitment, for example:
 - Memoranda;
 - records of formal meetings; or
 - bulletin board postings.
 - b. Identify actions that provide evidence of environmental commitment.
- 3) Managers at all levels and in all functions whose activities may impact environmental performance take responsibility and interest in limiting the environmental impacts of their operations.
- a. Identify activities in which line managers are involved, for example:
 - They routinely observe field level compliance activities;
 - participate in audits and self-assessments;
 - write and review procedures; or
 - serve on environmental advisory committees.
 - b. Determine what kind of environmental information line managers solicit and receive and how they obtain this information.
 - c. Review internal memos relevant to environmental management activities and manager meeting minutes to assess their level of involvement.
 - d. Determine what actions have been taken by line management in response to environmental accidents and occurrences.
- 4) Management and staff cooperate fully and openly with internal and external oversight groups. (Linkage with Section 33 and Section 37)
- a. Based on interviews with internal environmental staff and external oversight organizations, determine whether the relationship between the two is cooperative or adversarial.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3

Section 35

Assessing Environmental Programs Environmental Protection Programs

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Table of Contents

1. Performance Objective	35-1
2. Key Evaluative Concerns	35-1
3. Criteria	35-1
A. Specific Environmental Protection Programs	35-1
B. Specific Program Plans	35-3
C. Other Programs Related to Environmental Protection	35-4

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

1. Performance Objective

Programs should be in place to ensure compliance with applicable Federal, state, and local environmental protection laws and regulations, and internal Federal agency policies that are designed to protect the environment and public health and welfare.

2. Key Evaluative Concerns

The purpose of this assessment discipline is to evaluate the extent to which the organization has developed and implemented specific environmental protection programs and plans which, if properly managed, should help maintain compliance and ensure movement towards environmental excellence. This category will be evaluated based on the existence, quality, and effectiveness of specific programs, including all necessary program elements.

Whereas the other protocol areas evaluate specific characteristics and elements of environmental management systems, this discipline will evaluate the implementation of these systems for issue specific environmental programs.

3. Criteria

A. Specific Environmental Protection Programs

- 1) For each of the EPP programs (as a minimum, these tested in Phase 2) determine whether a program is necessary and whether existing programs are sufficient to identify, quantify, and control risks.
 - a. Determine whether applicable environmental programs include the following program elements:
 - formal policies and plans;
 - identification and characterization of sources;
 - understanding of applicable regulatory requirements;
 - responsibilities;
 - implementation procedures;
 - recordkeeping and reporting systems;
 - training; and
 - program evaluation and oversight.
 - b. Evaluate the effectiveness of the organization's environmental programs
- 2) Effective environmental protection programs are in place to identify, control, and monitor air emissions.
- 3) The organization has a program for the protection of surface waters, including:
 - a. Identification of discharge points and sources;

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- b. applicable discharge permits, monitoring program, an effective Spill Prevention, Control, and Countermeasures Plan; and
 - c. reporting and recordkeeping systems.
- 4) The organization has a program for the protection of potable water supplies (including backflow prevention systems).
- 5) The organization has determined and documented the need for site specific groundwater protection programs. When necessary, a groundwater monitoring program has been established to address the needs of specific sites.
- 6) Programs are in place for the proper management and control of toxic and chemical materials to prevent or minimize their release into the environment, including programs for:
 - a. Procurement, handling, and storage of toxic and chemical materials;
 - b. management and control of polychlorinated biphenyls;
 - c. management and control of pesticides;
 - d. management and control of petroleum, petroleum products, and chemicals in aboveground or underground storage tanks; and
 - e. containment or removal of asbestos.
- 7) The organization has a program for the management of solid, hazardous, and radioactive waste, including:
 - a. Waste source identification;
 - b. waste characterization;
 - c. waste acceptance criteria, where appropriate;
 - d. treatment, storage and disposal practices;
 - e. contingency plans;
 - f. recordkeeping systems;
 - g. training;
 - h. waste minimization, and

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3 - Section 35

- i. a formalized pollution prevention program as outlined in relevant executive orders.
- 8) Programs are in effect that provide for environmental radiation protection through adherence to ALARA principals. Additional programs are in place that require:
 - a. Radiological environmental surveillance;
 - b. evaluation of unplanned releases of radioactive materials; and
 - c. evaluation of radiation exposure to the public.
- 9) The organization has a program to identify, remove, and/or routinely monitor underground storage tanks.
- 10) The organization has a program for compliance with Federal agency requirements for implementing NEPA, including screening/review and determination of the appropriate level of NEPA documentation for each proposed action.
 - a. Identify the system to assess the acceptability of contractors preparing NEPA documentation.
 - b. Determine whether environmental evaluations or checklists are used to initially screen every proposed action.
 - c. Identify the criteria and process used to recommend the level of NEPA documentation to the appropriate Federal agency authority for determination.

B. Specific Program Plans

- 1) The responsible field organization has prepared and routinely updated formal program plans for the following:
 - a. Groundwater protection management;
 - b. waste minimization; and
 - c. pollution prevention awareness.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- 2) The organization has developed an environmental monitoring and surveillance plan.
 - a. Determine whether the organization has a monitoring plan and whether it addresses all environmental monitoring needs and requirements relevant to the organization.

C. Other Programs Related to Environmental Protection

- 1). A program is in place to plan and effectively implement all actions required to manage responses to releases of hazardous substances to the environment from inactive waste sites or to releases of reportable quantities of hazardous materials.
 - a. Determine whether the organization has formal written emergency response plans, such as SPCC Plan, etc. as required.
 - b. Assess whether these plans are clear, complete, and current as to who has the Emergency Coordinator responsibility, what emergency response equipment is available and where, and whether the emergency response procedures are site-specific.
 - c. Determine whether staff have received appropriate training in planned emergency response procedures. Does the organization hold periodic drills or other readiness exercises.
 - d. Review emergency response plan documents, internal records of emergency response drills, other readiness exercises conducted.
- 2) The organization has developed and implemented preventive maintenance programs to ensure proper operation of pollution control equipment. (Linkage with Section 40)
 - a. Determine what has been the operating experience of this organization over the past year with respect to pollution control equipment outage, needed repairs.
 - b. Assess whether the organization has preventive maintenance programs in place and functioning for any critical operating and pollution control equipment.
 - c. Determine whether preventive maintenance schedules are automated or how responsible personnel know when a particular planned maintenance activity is to be performed.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- c. Determine whether preventive maintenance schedules are automated or how responsible personnel know when a particular planned maintenance activity is to be performed.
- 3) The organization has emergency preparedness plans such as contingency plans, Spill Prevention, Control, and Countermeasures plans, and a general emergency plan that addresses any potential hazard including natural disasters, fire, explosions, etc.
 - a. Verify that emergency response plans and programs include all applicable elements, including roles and responsibilities; procedures, training, and equipment.
 - b. Determine whether crisis management responsibilities are defined at all organizational levels.
 - c. Review responsibilities in the emergency response plan against organizational charts and general responsibilities.
- 4) A Quality Assurance Program and organization is in place to assure that environmental programs provide adequate protection to the environment and to public health, and that environmental data are representative and defensible.
 - a. Determine whether environmental measurement activities are conducted following EPA-approved methods and procedures.
- 5) A P2 plan outlines a facility's environmental future with respect to all environmental impacts and compliance programs.
 - A. Pollution Prevention Plan Development Steps
 - Develop P2 goals;
 - Obtain Management commitment;
 - Establish a P2 team;
 - Develop a baseline;
 - Identify P2 activities and opportunities;
 - Develop criteria and rank the activities and opportunities; and
 - Conduct management review.
 - B. P2 Plan - a P2 program is a road map describing:
 - P2 activities;
 - The status of activities in progress;
 - P2 goals; and
 - Reductions achieved through P2 activities.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3

Section 36

Assessing Environmental Programs

Environmental Commitment

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb. 96.

Table of Contents

1. Performance Objective	36-1
2. Key Evaluative Concerns	36-1
3. Criteria	36-1
A. Regulatory Tracking and Translation	36-1
B. Procedures	36-3

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

1. Performance Objective

Formal systems and procedures should be in place to manage day-to-day environmental compliance. This includes systems to track and understand regulatory requirements, procedures for implementation of policies and programs, routine inspections, and systems for recordkeeping and reporting.

2. Key Evaluative Concerns

In this audit discipline, the formality of environmental programs and supporting management systems for ensuring compliance will be evaluated. This discipline complements the Environmental Protection Programs discipline by focusing on the formal systems and controls that are in place to assure compliance of day-to-day operations. The assessment team will assess the existence and effectiveness of a formal system for tracking, interpreting, and distributing relevant regulatory requirements. The organization will also be evaluated on its implementation of environmental programs through specific guidance procedures and standards. The organization's system for the conduct of routine inspections to identify and prevent problems will be evaluated. Finally, systems for the maintenance and retention of records as well as assurance of necessary reporting will be assessed.

3. Criteria

A. Regulatory Tracking and Translation

- 1) A formal system is in place to routinely track and interpret new and/or changes to Federal, state, and local regulations and Federal agency policies for the organization.
 - a. Determine how the organization stays current with new and emerging environmental regulations and trends.
 - b. Identify who within the organization is responsible for regulatory tracking.
 - c. Determine how new regulations are interpreted as to their applicability to the organization and by whom. Determine the role of the legal department in this task.
 - d. Determine whether the organization has a formal system for ensuring that new requirements are incorporated into existing programs, policies, and procedures.
 - e. Note the availability of regulatory reference material (compilations such as BNA, automated access via software, etc.), technical books, and other reference materials.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- 2) There is a process to ensure that guidance on new regulatory requirements is incorporated into organization or site-specific standard operating procedures, as appropriate.
 - a. Determine if there is a formal system in place to update environmental programs and procedures to reflect changes in regulatory requirements.
- 3) Relevant regulatory information is routinely distributed to field organizations in a timely manner.
 - a. Determine how and in what form regulatory information is transmitted to the field.
 - b. Determine whether the right people learn of the developments with sufficient lead time to take appropriate action.
- 4) Field organizations are provided sufficient guidance for compliance with new regulations or policies in the form of guidance documents, sample plans and procedures.
 - a. Determine how this guidance is provided and by whom, such as through guidance manuals, training, memorandum, etc.
 - b. Determine the level of guidance provided to the field along with regulatory distribution, and assess the adequacy of this guidance.
 - c. Interview field personnel and obtain their opinion of the adequacy of guidance.

B. Procedures

- 1) The organization has a formal, controlled process for reviewing, creating, updating, and approving new procedures.
 - a. Develop an understanding of this process, including types of approval, responsibilities, etc.
 - b. Test the system by identifying a sample of procedures to determine if they have been reviewed and updated. Test also by identifying a new regulatory requirement and determining whether a procedure has been created and approved.
- 2) Procedures and standards are issued from an organizational level with the authority to mandate implementation. (Linkage with Section 33)

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3 - Section 36

- a. Identify who issues environmental standards and their level of authority within the organization.
 - b. Assess whether the level of procedure issuance is sufficient to ensure implementation.
- 3) Formal standards and procedures have been developed for the implementation of specific environmental protection programs.
- a. Determine whether the organization has written procedures for environmental activities associated with specific environmental programs, for example, inspections, reporting, emergency response, NEPA.
 - b. Review a sample of program specific procedures to assess the quality and adequacy of instruction.
 - c. Evaluate the process to review the technical content and adequacy of NEPA documentation.
- 4) There are procedures to ensure that any activities that might impact the environment are reviewed for environmental protection considerations.
- a. Determine whether standard operating procedures include environmental protection standards.
 - b. Determine whether the organization has a system to ensure that all procedures are reviewed and revised to include environmental protection considerations (Linkage with Section 40).
- 5) Procedures are part of a formal, auditable document control system designed to ensure that personnel have ready access to current versions of procedures containing environmental requirements.
- a. Develop an understanding of how procedures are organized and controlled, for example, whether procedures are centrally located or at each individual operating site, and whether they are controlled using a manual or computerized system.
 - b. Determine which environmental procedures are routinely accessible at the facility level.
 - c. Verify accessibility by requesting a sample of specific procedures.
- 6) The organization has implemented a system to periodically review and update environmental procedures.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3 - Section 36

- a. Determine how often procedures are reviewed and updated and by whom.
- b. Determine how revised or updated procedures are communicated/distributed to the rest of the organization.
- c. Determine whether there is a requirement for periodic review of procedures by users.

C. Routine Facility Inspections

(Linkage with Section 35 and Section 39)

- 1) The organization has a program for routine site and equipment inspections and compliance checks, including appropriate documentation.
 - a. Determine whether environmental or other staff conduct occasional or routine inspections to determine compliance with specific environmental legal and regulatory requirements, and check the frequency of these inspections.
 - b. Determine whether regular tests and inspections are performed on critical operating and pollution control equipment, (e.g., electrostatic precipitators, scrubbers, air monitors, or environmental measurement devices).
 - c. Determine whether these inspections follow a formal written protocol or checklist.
 - d. Determine whether results of inspections are documented and retained. Review documentation of a sample of routine inspections.
- 2) The organization has a formal system for follow-up of exceptions noted in inspections, which is supported by management review.
 - a. Develop an understanding of the follow-up system and responsibilities.
 - b. Determine if there is a process for reporting exceptions to management.
 - c. Determine whether management reviews inspection documentation and corrective actions.
 - d. Determine if there is a tracking process to ensure the corrective actions or repairs are taken in a timely manner.
 - e. Determine whether the organization has a system in place to minimize repeated exceptions as noted in inspections (e.g., through root cause analysis).

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

D. Recordkeeping and Reporting
(Linkage with Section 33 and Section 35)

- 1) Systems are in place for the appropriate documentation and recordkeeping of environmental performance.
 - a. Develop an understanding of all systems that are in place for recordkeeping and document control.
 - Tracking of key regulatory schedules (e.g., permit renewals, report submissions, required training.).
 - Maintenance of compliance records (e.g., inspection logs, source and/or ambient measurement data.).
 - Preparation and submission of required regulatory reports (e.g., RCRA generator report, hazardous material inventory and release reports, PCB inventory and disposal report.).
 - b. Determine whether the organization maintains appropriate documentation and records of environmental inventories, permits, and environmental performance for the following programs:
 - Water pollution control;
 - air pollution control;
 - hazardous waste management;
 - reportable spill incidents;
 - PCB inventory and disposal;
 - Toxic Substance Control Act Section 8(c) and 8(e) files;
 - training; and
 - EPA.
 - c. In general, assess the state of the organization's files and recordkeeping practice regarding these environmental records. Determine whether the files are complete, current, and readily accessible.
 - d. Determine the extent to which environmental information management is automated or manual.
 - e. Determine whether recordkeeping practices are formal and systematic.
- 2) The organization has a document control system and record retention policy.
 - a. Determine whether the organization has a formal records retention policy which covers environmental compliance and other related environmental information. In lieu of a formal policy, are guidelines provided to staff regarding environmental records retention.
 - b. Assess whether individuals are knowledgeable of the record retention policy.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.
Phase 3 - Section 36

- c. Where applicable, verify that the organization retains environmental records for the retention period specified by regulation.
 - d. Determine whether the system has the capability to track the status of NEPA compliance for planning, funding, approval, design, and construction phases of all proposed actions.
 - e. Determine whether the system accounts for classified documentation, if necessary.
- 3) There are systems in place to ensure that environmental reports required by Federal and state regulations and Federal agency policy are routinely prepared and submitted on a timely basis.
- a. Determine how the organization ensures that environmental reports required by Federal or state regulation are routinely prepared and submitted to the appropriate regulatory agencies in a timely manner.
 - b. Assess the effectiveness of the system by checking some reporting requirements such as the following:
 - Annual hazardous waste generator reports have been submitted to appropriate state or Federal EPA.
- 4) Environmental status reports with the appropriate level of detail are routinely prepared for internal management purposes and for reporting environmental concerns to higher levels of management in a timely manner. (Linkage with Section 33 and Section 34)
- a. Identify what kind of reports are prepared, and determine the content and frequency of these reports.
 - b. Determine whether these reports include the full range of environmental issues/activities.
 - c. Determine whether other systems for conveying environmental information are in place (regular meetings, reports, self assessments, etc.).
 - d. Note whether environmental status information includes an appropriate level of detail to sufficiently inform senior management.
 - e. Note whether environmental status reports compare accomplishments to goals.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- 5) There are formal mechanisms to investigate, report, correct, track, and monitor trends in environmental problems and "incidents." The types and magnitudes of the problems that should be reported are well defined. (Linkage with Section 39)
- a. Determine whether the organization has a formal written procedure for environmental incident investigation and reporting.
 - b. Review files of investigation reports to determine whether root causes of problems and incidents are identified and trended and whether there have been recurring problems.
 - c. Determine whether corrective actions have been planned and implemented for these incidents.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3

Section 37

Assessing Environmental Programs Internal and External Communication

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Table of Contents

1. Performance Objective	37-1
2. Key Evaluative Concerns	37-1
3. Criteria	37-1
A. Internal Communication	37-1
B. External Communication	37-3

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

1. Performance Objective

Formal and informal channels of communication should be utilized to facilitate implementation of all environmental management systems and programs; to emphasize management commitment to environmental protection; to generate a sense of environmental awareness throughout the organization; and to manage relationships with external oversight organizations and others who are likely to be concerned with the success of the organization's environmental protection efforts.

2. Key Evaluative Concerns

The focus of this audit discipline is an evaluation of internal and external communication systems. The effectiveness of internal communication systems will be determined through an evaluation of the understanding of roles and responsibilities and the awareness of environmental policies, procedures, and programs throughout the organization. The extent and effectiveness of external communications will be assessed based on consistency of the external dialogue, monitoring of external concerns, and external recognition of the organization's environmental commitment.

3. Criteria

A. Internal Communications

- 1) Environmental information is effectively communicated through formal or informal means throughout the organization (top-down, bottom-up, and lateral).
 - a. Determine whether these formal channels exist and in what form (reports, meetings, memoranda, etc.).
 - b. Determine whether there are regular line management and environmental staff meetings that adequately cover environmental issues.
 - c. Evaluate the flow of communication between line management and operating staff, as well as between various functional areas.
- 2) There is a formal system in place to allow personnel to anonymously communicate (without retribution) environmental concerns to upper levels of management for resolution.
 - a. Determine whether such a system exists, how it works, to whom concerns are reported, and what type of action is taken.
 - b. Determine whether personnel at various levels in the organization are aware of its existence.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- c. Note any evidence that the system is used, and whether it is considered useful.
 - d. Evaluate demonstrated management support for the system.
- 3) Informal channels of internal communication are encouraged as a means of developing cooperation and commitment to environmental protection.
- a. Identify the informal modes of communication used in the organization and assess their effectiveness.
 - b. Determine whether environmental staff across programs, facilities, and units share information and assist each other on environmental problems.
- 4) Environmental awareness is continually reinforced throughout the organization via the use of newsletters, bulletin boards, videotapes, office-wide programs, or other means. (Linkage with Section 37)
- a. Identify communication modes used to promote environmental awareness.
 - b. Note observations of environmental awareness promotion throughout the facility.
 - c. Compare environmental awareness to health and safety awareness for perspective.
- 5) Formal communication of environmental protection directives is timely, and effectively reaches all responsible elements of the organization. (Linkage with Section 33 and Section 36)
- a. Determine how quickly the following types of environmental information is communicated to management:
 - Routine environmental status information;
 - incident or major issue information; and
 - controversial issues requiring NEPA.
 - b. Determine how quickly new environmental requirements, programs or other information is communicated to the field.
- 6) Employee environmental concerns are solicited and addressed, and both the concerns and responses are documented.
- a. Identify employee environmental concerns that have and have not been addressed.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- b. For those that were addressed, note the organization's response, and whether the concerns were documented.
 - c. For those that were not addressed, identify reasons why.
 - d. Note whether well-founded concerns expressed in one facility or group are shared with other facilities or groups that might have similar problems.
- 7) The effectiveness of communication is demonstrated by a widespread awareness and acceptance of the organizational commitment to environmental protection. (Linkage with Section 34)
- a. Through interviews, assess the general understanding and appreciation for environmental issues exhibited by organization employees.
- 8) Effective working relationships exist between headquarters and field environmental staff as well as between staff and line personnel whose functional responsibilities impact environmental performance.
- a. Check for close working relationships between environmental staff, line management and other key functional specialists within the organization, (e.g., engineering, legal, purchasing).
 - b. Note any examples where networking by environmental staff with these other professionals has resulted in decisions or actions which have increased the effectiveness of the environmental management function.
 - c. Note any evidence of lack of cooperation between line and oversight groups.

B. External Communication

- 1) The organization has a good working relationship and cooperates fully and openly with external oversight organizations.
 - a. Determine whether the organization has frequent, proactive interaction with regulatory agencies and keeps them informed of the environmental status of the organization.
 - b. Determine whether the relationship between environmental staff and external oversight organizations appears cooperative or adversarial, based on interviews with representatives of both.
 - c. If appropriate, interview regulatory representatives to obtain their perspective of the working relationship.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- 2) The organization has defined who will be the internal points of contact with external parties, and has identified the points of contact within appropriate external parties.
 - a. Identify the key internal points of contact for interaction with external organizations.
 - b. Determine whether the organization has identified points of contact in external organizations.
- 3) A program exists for communicating with external parties such as regulatory agencies, environmental groups, and the local community to provide them with information the opportunity to be involved in key decisions related to environmental protection.
 - a. Determine what kinds of communication programs the organization has with the local community. (e.g., community relations plan, education, visitation of facilities, public reading rooms, etc.)
 - b. Based on interviews with facility staff, assess how the organization interacts with environmental groups.
 - c. Identify any complaints from neighbors and determine how the organization handles them.
 - d. Identify recent key decisions by the organization that have related to environmental protection. Determine whether external agencies, organizations, or individuals were provided the opportunity to be involved.
 - e. Based on interviews with regulatory agencies, environmental groups, and representatives of the local community, determine whether external organizations perceive that they have had such opportunities.
- 4) Formal communication of environmental risks and protection efforts occurs frequently, is timely, and effectively reaches external organizations, including regulatory agencies, environmental groups, and representatives of the local community.
 - a. Evaluate whether environmental risks and protection efforts are communicated to such contacts routinely or only on an infrequent basis. Note whether the information is timely.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- b. Based on outside interviews, determine whether the information is received and is perceived to be comprehensible. Determine whether recipients believe they are being kept up to date on the organization's activities that may impact environmental performance.
- 5) The environmental concerns of external parties are addressed, and both the concerns and responses are documented.
 - a. Review files to determine whether external concerns have been documented and addressed.
 - b. For those that were addressed, note the organization's response, and whether the concerns were documented and trended.
- 6) The effectiveness of communication is demonstrated by a widespread external recognition of the organization's commitment to environmental protection.
 - a. To the extent possible, determine the recognition of this commitment among regulatory agencies, environmental groups, and representatives of the local community.
- 7) The organization periodically assesses the effectiveness of external communications, makes changes as necessary, and documents the results of the evaluations and changes made.
 - a. Determine how the organization assesses effectiveness and what changes have resulted from such an evaluation.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3

Section 38

Assessing Environmental Programs Staff Resources, Training, and Development

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.
6-97

Table of Contents

1. Performance Objective	38-1
2. Key Evaluative Concerns	38-1
3. Criteria	38-1
A. Environmental Staffing	38-1
B. Job Descriptions and Performance Evaluations	38-2
C. Environmental Training Program	38-3
D. Staff Development Opportunities	38-6

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

1. Performance Objective

Programs should be in place to ensure that staff resources are sufficient to effectively develop and implement the organization's environmental protection programs. The organization should have a formal program in place to ensure that all personnel have received environmental protection training appropriate for their job responsibilities. The organization should also provide staff development and career advancement opportunities for environmental staff.

2. Key Evaluative Concerns

In this assessment discipline, the Assessment Team will determine whether environmental staffing resources are sufficient from a quantitative and qualitative perspective to properly address the organization's environmental risks. Job responsibilities and performance appraisal processes will be reviewed for evidence of the importance of individual environmental performance. The degree of formality, completeness, and appropriateness of the organization's systems for identifying and satisfying environmental skills training needs and for providing opportunities for career development will also be assessed.

3. Criteria

A. Environmental Staffing

- 1) Environmental staffing levels are sufficient to achieve environmental performance goals. This includes dedicated environmental support staff and others with collateral duties (e.g., line managers with other support functions).
 - a. Determine how the organization assesses environmental staffing needs.
 - b. Determine whether staffing is in line with identified needs.
 - c. Determine whether requests for additional environmental staff have been approved or denied and why.
 - d. Identify environmental programs or projects that have not been undertaken or completed because of insufficient environmental staff.
 - e. Note any other evidence of insufficient environmental staff to assure compliance, e.g.,
 - compliance deficiencies whose root causes are inadequate resources;
 - excessive overtime; or
 - excessive use of contractors.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- 2) Personnel with environmental responsibilities have the relevant background and training to carry out their responsibilities.
 - a. Determine what qualifications are necessary for environmental staffing and other positions with environmental responsibilities.
 - b. Review a sample of resumes for selected environmental staff and note the following:
 - Educational training in environmental management;
 - diplomas and certifications of environmental training (internal and external); and
 - relevant work experience in environmental management.
 - c. Environmental support staff demonstrate sufficient knowledge and familiarity with the organization's operations, environmental issues, and programs and procedures to effectively carry out their respective environmental protection responsibilities.
- 3) Staffing for environmental protection activities is provided in a timely manner.
 - a. Determine whether additional staff with environmental responsibilities are added as the need arises or whether there is a significant delay.
 - b. Determine whether environmental activities requiring immediate attention (e.g., a spill or a determination of environmental non-compliance) are responded to in a timely manner.
- 4) A system is in place to identify both short-term and long-term environmental staffing requirements, both within the environmental support group and within line units with environmental responsibilities.
 - a. Determine how short- and long-term environmental staffing requirements are determined.
 - b. Determine whether this staffing assessment includes both the environmental support staff and line management needs.

B. Job Descriptions and Performance Evaluations
(Linkage with Section 33 B.)

- 1) Appropriate job descriptions are established and maintained for environmental positions.
 - a. Review formal written job descriptions for environmental staff to determine

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3 - Section 38

Staff Resources,

Training, and Development

- whether they are current, complete, and reflective of existing duties.
- b. Identify other positions in each department that include environmental responsibilities. Review the formal written job descriptions for these other key line management and operating personnel and assess whether these job descriptions incorporate any statements regarding their environmental-related duties and responsibilities.
- 2) Performance standards used in the performance appraisal process include the environmental aspects of individual job responsibilities, including line management responsibilities for environmental performance. Environmental factors are given comparable emphasis to safety and productivity factors.
- a. Determine whether explicit measures of performance have been identified for specific jobs, including both environmental staff and line management personnel.
 - b. Determine whether environmental criteria receive substantially less emphasis than other criteria such as productivity and safety.
 - c. Determine whether periodic staff performance reviews include explicit measures of environment-related job performance. Note examples of environmental performance criteria used.
- 3) Good environmental performance is rewarded in practice, and poor performance is penalized.
- a. Identify reward, incentive or bonus systems (financial or nonfinancial) for environmental staff and other personnel with environmental responsibilities.
 - b. Determine what actions are taken for poor environmental performance.
 - c. Identify other methods used for praise or corrective action such as verbal feedback, memorandums, internal announcements, etc.

C. Environmental Training Programs

- 1) Environmental training programs are defined in controlled documents such as a training program manual.
 - a. Understand how environmental training requirements are determined and where they are explicitly identified, e.g., training plans.
 - b. Determine if a training manual or other documents describe environmental training programs.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- 2) There is a process in place to identify and evaluate environmental training needs for all personnel. These needs are incorporated into individual professional development plans.
 - a. Determine whether the organization has assessed its environmental training needs including type of training and staff requiring it.
 - b. Determine whether environmental skill training requirements (e.g., regulatory hazardous materials handling, emergency and spill response) have been identified for all job classifications where employees' work activities can affect environmental performance.
 - c. Determine whether environmental training is included in job descriptions and/or individual professional development plans.
 - d. Determine how the organization ensures that employees receive the necessary training at appropriate intervals.
- 3) The environmental training program is supported by appropriate training materials and qualified trainers.
 - a. Review training materials and determine whether the materials (e.g., written, audiovisual) are appropriate and adequate to the purpose.
 - b. Review resumes of trainers and determine whether the trainers have the appropriate educational background and experience for the particular training they deliver.
- 4) There is a formal process to ensure that training courses are developed at an appropriate depth and provide adequate coverage of Federal and state regulations, and internal policies and procedures.
 - a. Develop an understanding of the process for ensuring that all relevant regulatory requirements are covered in training courses.
- 5) All levels of personnel -- from operators to lower, middle, and upper management -- undergo some level of environmental awareness training. (Linkage with Section 34)
 - a. Determine who receives environmental awareness training.
 - b. Determine whether environmental awareness training is given to all line personnel whose activities may impact environmental management and compliance, as well as to their supervisors.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3 - Section 38

Staff Resources,
Training, and Development

- c. Determine what environmental training and awareness activities, if any, the organization specifically directs toward middle and upper level management.
 - d. Determine whether contractors are included in awareness training.
- 6) Environmental protection training is included in new employee and contractor orientation training, and environmental protection training requirements have been established for temporary employees and visitors.
- a. Determine whether the organization routinely conducts a formal orientation program for all new employees and contractors, and assess the adequacy of the training content.
 - b. Review training records to determine if all new employees and contractors have attended orientation training.
- 7) Training activities are documented and the training recordkeeping system is auditable, complete, and current.
- a. Determine how the organization maintains employee environmental training records and who is responsible for this activity.
 - b. Identify certain training required by regulations (e.g., hazardous waste training, etc.) and determine whether all individuals performing these tasks have had the necessary training.
 - c. Select a sample of environmental and non-environmental employees and review training records to determine if they are accurate, complete, and current.
 - d. For these same individuals, compare actual training completed with training needs identified for their position or in their individual staff development plan.
 - e. Assess whether the training recordkeeping system is easily accessible, complete and current.
- 8) There is a formal documented process for the periodic evaluation of the effectiveness of training programs.
- a. Determine whether and how evaluations of the training program are conducted.
 - b. Review the results of the latest evaluation and check changes made in response to the evaluation.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- c. Interview selected personnel regarding their training and determine whether training was absorbed.
- d. Determine whether training feedback mechanisms (e.g., tests, course feedback forms) are provided to evaluate effectiveness of training.

D. Staff Development Opportunities

- 1) The organization provides career opportunities and advancement for environmental staff within the program, where possible, or in other programs/facilities.
 - a. Determine whether well-established career paths exist within the environmental management function. Identify these paths, and determine whether they can lead to top management positions or whether they eventually reach "dead-ends."
 - b. Identify line positions that are of the same government grade (or that are shown in the organization's hierarchy to be at the same organizational level) as the various environmental support positions.
 - c. Determine whether environmental support personnel and these "line peers" are considered equally eligible for lateral job changes that provide breadth of experience, and for advancement up the organization's management ladder. To gather evidence, ask senior management, line management, supervisors of environmental support personnel, line personnel, and environmental support personnel.
 - d. Identify any middle or senior management staff that have environmental support experience.
- 2) In staff development efforts, environmental support staff are encouraged to acquire management and professional skills in order to build their supervisory and management potential.
 - a. Through interviews with environmental support staff, determine whether they are encouraged and given opportunities to acquire management skills.
 - b. Compare training records of environmental support personnel and "line peers" to see whether training in skills necessary for promotion up the management ladder are offered equally to both groups. Examples of such training include managerial skills, supervisory competencies, presentation techniques, media relations, policy/program development, and negotiation skills.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- 3) Cross-functional training is available and encouraged to maintain and expand staff capabilities.
 - a. Determine what kinds of programs exist to perform cross-functional tasks or to move from one department to another in an effort to expand staff skill base.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3

Section 39

Assessing Environmental Programs Program Evaluation, Reporting and Corrective Action

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Table of Contents

1. Performance Objective	39-1
2. Key Evaluative Concerns	39-1
3. Criteria	39-1
A. Self-Assessment and Appraisal Programs	39-1
B. Reporting and Follow-up	39-3

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

1. Performance Objective

The organization should have self-assessment and oversight programs in place to effectively evaluate environmental protection activities, anticipate and report environmental concerns, and implement corrective actions. The major objective of self-assessment programs is to establish accountability and excellence at the "grassroots" level, thereby involving people who are the most familiar with the operations and their management. Self-assessment is a continual line management activity that acquires, assimilates, documents, and reports through all levels of an organization on the effectiveness, adequacy, efficiency, and economy of its activities. Self-assessment should establish a culture of accountability and continuous improvement as well as foster excellence in all program activities.

2. Key Evaluative Concerns

The purpose of this audit discipline is to evaluate programs that assess the design adequacy and implementation effectiveness of environmental protection systems as well as the reporting and follow up activities associated with these appraisals. Program evaluation includes a review of all major audits; appraisals; and self-assessments. It does not include routine inspections, which are addressed in the Formality of Programs section of this protocol.

Programs will be evaluated on the basis of its design and implementation to ensure adequate breadth and depth of coverage. Reporting and follow-up will be assessed for adequacy of formal systems to clearly communicate in a timely fashion the results of the reviews to appropriate levels of management. Finally, the system for periodic trends analysis of all findings to identify underlying programmatic and management deficiencies will be evaluated.

3. Criteria

A. Self-Assessment and Appraisal Programs

The depth of detail required and the magnitude of resources expended for self-assessment should be commensurate with the element's relative importance to environmental compliance and/or other facility-specific requirements. Self-assessment should incorporate both internal self-assessments and independent technical and management appraisals.

- 1) Facilities and departments have implemented on-going formal, written programs which include both internal assessments and independent oversight appraisals.
 - a. Determine whether these programs include appropriate elements/components, such as:
 - Formal program charter;
 - comprehensive scope;
 - defined schedules;
 - standard operating procedures for self-assessment;
 - formal reporting system;

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- root cause analysis;
 - formal corrective action system;
 - formal process to identify trends;
 - formal mechanisms to communicate root causes, trends, and lessons learned throughout the organization;
 - formal self-assessment training program;
 - full cooperation with external oversight or assessment organizations; and
 - line management-fostered atmosphere of continual self-evaluation and quality improvement.
- b. Determine whether the organization has a formal, documented environmental self-assessment program.
 - c. Determine whether the program covers compliance with internal policies and procedures, applicable governmental laws and regulations, and best management practices.
 - d. Determine whether subordinate offices and facilities have a self-assessment program.
 - e. Identify the environmental programs (e.g., air, surface water, drinking water, groundwater, hazardous and solid waste, etc.) that are evaluated in self-assessments.
 - f. Determine responsibilities, frequency, and process for conducting self-assessments.
 - g. Determine whether self-assessment activities are integrated both within the line organization and across staff functions to ensure a comprehensive self-assessment process.
- 2) Responsibilities and authorities for self-assessment activities are clearly defined. (Linkage with Section 35)
 - a. Determine who is responsible for implementing the self assessment and appraisal programs.
 - b. Determine if these individuals are sufficiently independent and have enough authority to effectively perform this responsibility.
 - c. Determine whether organizational staff are specifically dedicated to environmental appraisals or if not, how the organization staffs appraisals.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- 3) Frequency of self-assessments and appraisals is congruent with the program's goals.
 - a. Determine how frequently self-assessments and appraisals are conducted and how the organization determines frequency schedule.
 - b. Assess whether this frequency is sufficient to meet program goals.
- 4) Focused functional appraisals are conducted on specific issues to reduce the organization's long-term environmental liabilities. (Linkage with Section 40).
 - a. Determine whether the organization has a system to identify problem areas that require focused assessments.
- 5) Audits/appraisals are conducted by professionals who are trained and qualified.
 - a. Determine how assessors are selected and what qualifications or criteria are used in the selection process.
- 6) Audits/appraisals are conducted using formal, written guidance documents and are documented.
 - a. Determine whether guidance documents, audit protocols, checklists, and other tools are used in the preparation and conduct of the self-assessments and appraisals.
 - b. Determine whether notes are taken during the audits and retained for future reference.
- 7) Self-assessment program implementation is addressed in budget planning and budget requests (Linkage with Section 40).
 - a. Determine whether environmental self-assessments have been factored into strategic planning in terms of resource and budgetary requirements.
- 8) The systems used for environmental program evaluations are periodically critiqued and modifications are made as necessary.
 - a. Determine what system is in place to review environmental program evaluations.
 - b. Determine how often these programs are evaluated.
 - c. Identify changes made to the assessment program as a result of program review.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

B. Reporting and Follow-up

- 1) Assessment results are documented in formal reports distributed in a timely manner to appropriate levels of management.
 - a. Identify all self-assessments and appraisals that have been conducted over the last few years and determine if reports were prepared.
 - b. Review past self-assessment and appraisal reports. Identify level of reporting detail and individuals on distribution list. Assess whether reports reach high enough levels of management and wide distribution to related functions (e.g., legal, engineering, etc.). Assess whether reports provide adequate detail.
- 2) Corrective actions to address root cause of findings are developed and implemented by line management.
 - a. Determine how corrective actions are prioritized.
 - b. Corrective action plans are approved by both the oversight group and senior management prior to implementation.
 - c. For each self-assessment/appraisal that has been conducted, determine if a corrective action plan was developed by the appropriate department, approved by management, and implemented.
- 3) Corrective actions are independently tracked to ensure their completion, objectively verified at completion, and formally closed out.
 - a. Determine whether the organization and field offices have a system to track progress of corrective actions.
 - b. Assess the adequacy of progress on existing corrective action plans.
- 4) "Lessons learned" programs are implemented to seek out improvement opportunities for environmental performance.
 - a. Determine whether the organization has developed a program or system for learning from past problems, and sharing this information across the organization.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- 5) Trending analysis of findings is conducted on a periodic basis to identify underlying programmatic or management root causes.
 - a. Determine if any trending analysis is conducted and how frequently.
 - b. Review the results of these analyses and inquire about actions taken to correct root causes.
- 6) Performance indicators for environmental protection have been defined and are tracked and analyzed for trends.
 - a. Determine what performance indicators have been established.
 - b. Determine how performance indicators are tracked and analyzed for trends.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3

Section 40

Assessing Environmental Programs Environmental Planning and Risk Management

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Table of Contents

1. Performance Objective	40-1
2. Key Evaluative Concerns	40-1
3. Criteria	40-1
A. Environmental Planning and Budgeting	40-1
B. Risk Management	40-3

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Performance Objective

The organization should plan for environmental management activities to ensure that environmental resources needs are adequately addressed and the organization's environmental goals can be met. Planning for environmental protection should be integrated with planning for other organizational functions.

The organization should have a formal system to identify environmental hazards, assess the resulting environmental risks of those hazards, and mitigate risks.

2. Key Evaluative Concerns

This assessment discipline focuses on the environmental planning and risk management process. It evaluates the extent to which technical and financial planning related to environmental management is conducted and integrated with overall organizational planning. In addition, this discipline addresses the organization's system for identifying, assessing, and addressing potential environmental risks, including risk management program design and approach, issues identification, and management involvement.

3. Criteria

A. Environmental Planning and Budgeting

- 1) Environmental planning is conducted with comparable formality to planning for other organizational functions and includes both short- and long-term planning.
 - a. Determine the extent to which environmental planning decisions result from a formal, organized planning process.
 - b. Determine the frequency of formal environmental planning and the planning horizon (e.g., 1 year, 5 years, 10 years).
 - c. Compare how staffing and budgetary requirements for the environmental management function and for other organizational functions are determined.
 - d. Determine whether environmental planning is viewed as a strategic element in the organization's long-term success.
 - e. Determine whether the facility has a system to identify projects planned in the next year or two that will need NEPA review.
 - f. Determine if the facility utilizes the A-106 planning process and semi-annually updates its prioritized environmental requirements and submits them to EPA for review.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- g. Agency Environmental Plan is developed in accordance with EPA guidance contained in Federal Agency Environmental Management Program Planning and forwarded to EPA for formal review prior to being forwarded to OMB, in accordance with E.O. 12088 and OMB Circular A-106.
- 2) Environmental protection considerations are adequately included in planning for other organizational functions.
 - a. Review strategic and/or organizational plans, annual budget documents, proposed major capital projects, and property acquisitions and determine whether they include environmental considerations.
 - b. Identify any recent instances where environmental concerns raised through a program/project planning process have influenced proposed operating plans, financial plans, or other factors.
 - 3) Environmental issues are represented by qualified personnel in key strategic and operations planning meetings/committees.
 - a. Review minutes of planning meetings to determine if environmental personnel were involved.
 - b. Determine whether environmental issues were considered in planning meetings or activities.
 - 4) In the planning process, the organization has a system for establishing priorities and weighing competing factors, with environmental protection receiving equal weight to production.
 - a. Assess whether priority setting (i.e., selecting projects for budget) reflects environmental excellence goals.
 - b. Investigate environmental projects that have been delayed or canceled. Determine if these projects received equal consideration to other projects.
 - c. Determine whether plans for environmental management take into account and adequately reflect the implications of proposed operating and financial plans and initiatives.
 - d. Assure that all environmental projects are reviewed to ensure that assigned priorities reflect guidance issued by EPA in Federal Agency Environmental Management Program Planning and are reported to OMB in the Agency annual plan.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- 5) Commitment of funds for environmental-related activities is satisfactory to serve the organization's environmental performance goals, through both capital and maintenance projects.
 - a. Compare capital budget requests and annual budget allocations for environmental programs/projects to determine whether adequate funds have been committed to environmental protection.
 - b. Determine whether all environmental items, including staff and technical resources, have been identified in budget requests.
- 6) Environmental protection is an integral part of the budget and planning process.
 - a. Review budget requests and allocations for line operations and other functional areas to determine if they include environmental costs.
 - b. Determine whether environmental concerns are taken into consideration in budget decisions.
 - c. Ensure that all project funding necessary to comply with environmental standards is included in Agency budget plans and reported in the annual agency OMB environmental plan to EPA in accordance with Federal Agency Environmental Management Program Planning guidance.
- 7) The organization has assessed its needs for pollution control technologies and other technical equipment to achieve its performance goals.
 - a. Determine how the organization assesses its technical equipment needs to maintain compliance and reduce risks.
 - b. Identify programs or systems to keep updated on the latest pollution control technology and ensure that best available technology is used for maintaining compliance and reducing risks.
 - c. Determine whether environmental excursions and noncompliances are analyzed to identify whether technology can be improved to eliminate or reduce similar episodes in the future.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- 8) The organization has a system in place for the control and oversight of purchased materials, equipment, and services supporting environmental protection activities to ensure that they meet environmental specifications .
 - a. Determine how the organization ensures that new chemicals, equipment or contractors meet regulatory requirements and comply with organizational policies on environmental protection.

B. Risk Management

- 1) A formal environmental risk management program has been established and is operational. This program includes objectives, approach, procedures and risk evaluation criteria.
 - a. Identify the elements of the organization's risk management program and determine if the program is complete.
 - b. Review internal guidelines or criteria, quantitative or qualitative, used to determine whether a particular environmental risk arising out of operations would be deemed "acceptable" or "unacceptable".
- 2) A formal, systematic review of the organization's operations/activities is periodically conducted to identify and manage environmental risks.
 - a. Develop an understanding of and assess the process used to evaluate risks.
 - b. Determine how often these reviews are conducted, and by whom.
 - c. Determine what actions have been taken to mitigate or manage identified risks.
- 3) The organization has developed programs or standards to manage environmental risks not covered by regulatory requirements. (Linkage to Section 35)
 - a. Identify examples of how risk assessment has led to the development or enhancement of environmental protection programs.
- 4) All new projects, programs, or activities that may impact the environment are carefully reviewed to identify and address environmental risks as early as possible. A formal project/program review and approval process, which includes environmental considerations, has been established. (Linkage with Section 40. I.B.)

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

- a. Besides NEPA, identify what types of projects have environmental reviews performed, e.g., capital projects, R&D projects, facility-level maintenance modifications.
- b. Determine whether these reviews are performed only under certain circumstances or routinely for all projects.
- c. Determine the focus of the reviews and whether the project may raise any significant environmental compliance issues, or lead to any potentially significant environmental risks.
- d. Determine whether project environmental reviews typically follow a standard approach and whether there is any formal guidance on the approach.
- e. Identify the criteria used for assessing the impacts of a project (e.g., dollar value, project type, etc.).
- f. Review records or files of environmental reviews that have been performed.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Phase 3

Appendix

Selecting Documents to Review and Individuals to Interview for Environmental Management Assessments

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

The following discussion provides suggestions, by protocol discipline, for the most useful types of documents to review and general types of individuals to interview in the process of performing an Environmental Management Assessment.

Organizational Structure

The following types of individuals should be interviewed for this protocol area:

- *Representatives from the Federal agency's site office* as well as *subcontractors* to determine roles, responsibilities, reporting relationships, authorities, and level of coordination;
- *Environmental, health and safety (EHS) staff and top management* at the facility to determine the reporting "distance" between the person with primary responsibility for environmental support and the overall management of the organization; and to assess the appropriateness of layers of management and span of control; and
- *EHS and line staff* to understand the functional relationship of EHS to other parts of the organization; and to determine the organizational stature of the EHS office within the organization.

The following types of documents should be reviewed:

- Documents that define organizational responsibility, authority, or accountability for environmental programs;
- Organizational charts;
- Position or job descriptions for line and staff personnel;
- Environmental planning documents; and
- Formal measures used in assessing job performance.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Environmental Commitment

The following types of individuals should be interviewed for this protocol area:

- *Top management* to determine level of knowledge, personal involvement in environmental affairs, and inclusion of environmental issues in routine senior management meetings.
- *Management and line staff at all levels and across all functional areas* to determine level of environmental commitment, sense of "ownership" of environmental protection, degree to which environmental policies are distributed and understood, and allocation of human, financial, and technical resources.
- *Staff in non-environmental specialty areas* to determine the level of general environmental awareness.

The following types of documents should be reviewed:

- Environmental planning documents;
- general environmental policy statements;
- issue-specific policies addressing focused environmental concerns;
- environmental program descriptions and implementation plans;
- senior management statement of support for environmental programs, including reports, speeches, and newsletters;
- accounts of employee or organization involvement in or work with environmental task forces, environmental professional associations, or local community organizations;
- samples of routine environmental reports to upper management; and
- minutes of senior management meetings.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Environmental Protection Programs

The following types of individuals should be interviewed for this protocol area:

- *EHS staff and line management as well as subcontractors* to determine level of development or implementation of environmental programs or plans.

The following types of documents should be reviewed:

- Environmental monitoring and surveillance plans;
- source and emission inventories for air and water pollution control;
- NESHAPs agreement;
- toxic and chemical materials management plan;
- emergency response and remedial action plan;
- environmental incident reporting procedures;
- preventative maintenance and inspection procedures;
- reports to management or regulatory agencies; and
- opportunity assessments.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Formality of Environmental Programs

The following types of individuals should be interviewed for this protocol area:

- *Personnel responsible for tracking relevant environmental regulations* to determine if the organization is up-to-date on new, proposed, and emerging regulatory issues.
- *Personnel responsible for the development and implementation of procedures and standards* to determine the level of congruence with Federal agency's policies.
- *Personnel responsible for conducting routine site walk-through inspections and following-up on inspection findings* to determine adequacy of the system.
- *Personnel responsible for record-keeping and document control* to assess the document control system.

The following types of documents should be reviewed:

- Policies and procedures relating to project and field office implementation of environmental requirements;
- environmental protection plans;
- standard operating procedures for the site;
- regulatory tracking protocols and procedures;
- inspection checklists and logs; and
- examples of a variety of environmental records and reports, including incident and environmental performance reports.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Internal and External Communication

The following types of individuals should be interviewed for this protocol area:

- *Personnel responsible for communication of environmental information* (e.g., goals, performance, policies, and procedures) to understand how formal and informal communication channels are used.
- *Management and line staff* to determine extent to which environmental information is distributed within the organization.
- *Important external stakeholders*, such as environmental groups, state and Federal environmental regulators, and Federal agency management to determine extent of communication with and knowledge of the facility.

The following types of documents should be reviewed:

- Samples of the scope of environmental management reports;
- staff meeting minutes;
- internal newsletters which contain environmental information;
- forms and guidelines for internal anonymous reporting of environmental issues;
- documentation of information provided to and awareness programs for external stakeholders; and
- press releases relating to environmental issues.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Staff Resources, Training, and Development

The following types of individuals should be interviewed for this protocol area:

- *Personnel responsible for securing an adequate level of environmental staffing* to understand to assess the system to identify short- and long-term environmental staffing and resource requirements.
- A sample of *management and line staff at all levels* of the organization to determine if there is an adequate level of staffing for environmental functions and to determine the level of environmental training throughout the organization.
- *Training office personnel* to assess the training program and the process to evaluate and establish the organization's training needs.
- *Career development office personnel* to identify career opportunities for environmental staff.

The following types of documents should be reviewed:

- Documented requests and justifications for additional staff with environmental responsibilities;
- hiring plans;
- a sample of resumes for environmental and non-environmental staff who have environmental responsibilities;
- training program manuals;
- training records for a range of individuals within the organization, including environmental support personnel and their "line peers";
- job descriptions and performance criteria for line management and operating personnel; and
- individual professional development plans.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Program Evaluation, Reporting, and Corrective Action

The following types of individuals should be interviewed for this protocol area:

- *Personnel responsible for conducting and/or managing the self-appraisal process* to assess the design of the process.
- *Top management* to determine how self-appraisal information is used within the organization.
- *A sample of managers and line staff responsible* for implementing corrective actions.

The following types of documents should be reviewed:

- Formal descriptions of the oversight program or process, including responsibilities of key staff;
- self-appraisal program budget allocation;
- audit and appraisal reports;
- corrective action plans;
- documentation of follow-up activities for corrective actions; and
- trend analysis and performance indicator reports.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Environmental Planning and Risk Management

The following types of individuals should be interviewed for this protocol area:

- *Environmental planning personnel* to evaluate budgeting, priority-setting and allocation of resources activities.
- *Staff with the budgeting office* to determine if environmental planning is integrated with other organizational planning functions (e.g., development of operating and capital budgets).
- *Risk management personnel* to evaluate the adequacy of systems to identify and minimize environmental hazards.

The following types of documents should be reviewed:

- Short- and long-term business plans and strategic plans;
- formal risk management documents, such as readiness review plans or risk assessments; and
- environmental risk tracking and trending reports.

NOTE: Appendix 6-1 is an excerpt from the USEPA Generic Protocol, Feb 96.

Appendix 6-2

List of Categorical Exclusions (CX) and Screening Criteria (AR 200-2, Appendix A))

List of CXs

1. Normal personnel, fiscal, and administrative activities involving military and civilian personnel (recruiting, processing, paying, and recordkeeping).
2. Law and order activities performed by military police and physical plant protection and security personnel, excluding formulation and/or enforcement of hunting and fishing policies, or regulations that differ substantively from those in effect on surrounding non-Army lands.
3. Recreation and welfare activities not involving offroad recreational vehicle management.
4. Commissary and post exchange (PX) operations, except when hazardous material is stored or disposed.
5. Routine repair and maintenance of buildings, roads, airfields, grounds, equipment, and other facilities, except when requiring application or disposal of hazardous or contaminated materials.
6. Routine procurement of goods and services, including routine utility services.
7. Construction that does not significantly alter land use, provided the operation of the project when completed would not of itself have significant environmental impact; this includes grants to private lessee for similar construction (REC required).
8. Simulated war games and other tactical and logistical exercises without troops.
9. Training entirely of an administrative or classroom nature.
10. Storage of materials other than ammunition, explosives, pyrotechnics, nuclear, and other hazardous or toxic materials.
11. Operations conducted by established laboratories within enclosed facilities where:
 - a. all airborne emissions, waterborne effluents, external radiation levels, outdoor noise, and solid bulk waste disposal practices are in compliance with existing Federal, state, and local laws and regulations
 - b. no animals that must be captured from the wild are used as research subjects, excluding reintroduction projects (REC required).
12. Development and operational testing on a military installations, where the tests are conducted in conjunction with normal military training or maintenance activities so that the tests produce only incremental impacts, if any, and provided that the training and maintenance activities have been adequately assessed, where required, in other Army environmental documents (REC required).

(continued)

Appendix 6-2 (continued)

13. Routine movement of personnel; routine handling and distribution of nonhazardous and hazardous materials in conformance with DA, USEPA, DOT, and state regulations.
14. Reduction and realignment of civilian and/or military personnel that fall below the thresholds for reportable action as prescribed by statute of AR 5-10 (REC required).
15. Conversion of commercial activities to contract performance of services from in-house performance under the provisions of DODD 4100.15.
16. Preparation of regulations, procedures, manuals, and other guidance documents that implement, without substantive change, the applicable HQDA or other Federal agency regulations, procedures, manuals, and other guidance documents that have been environmentally evaluated.
17. Acquisition, installation, and operation of utility and communication systems, data processing, cable, and similar electronic equipment that use existing rights-of-way, easements, distribution systems, and facilities.
18. Activities that identify, or grant permits to identify, the state of the existing environment (for example, inspections, surveys, and investigations) without alteration of that environment or capture of wild animals.
19. Deployment of military units on a temporary duty (TDY) basis when existing facilities are used and the activities to be performed have no significant impact on the environment (REC required).
20. Grants of easements for the use of existing rights-of-way for use by vehicles: electrical, telephone, and other transmission and communications lines; transmitter and relay facilities; water, wastewater, stormwater, and irrigation pipelines, pumping stations, and facilities; and for similar public utility and transportation uses (REC required).
21. Grants of leases, licenses, and permits to use existing Army controlled property for non-Army activities, provided there is an existing land-use plan that has been environmentally assessed and the activity will be consistent with the plan (REC required).
22. Grants of consent agreements to use a Government-owned easement in a manner consistent with existing Army use of the easement; disposal of excess easement areas to the underlying fee owner (REC required).
23. Grants of licenses for the operation of telephone, gas, water, electricity, community television antenna, and other distribution systems normally considered as public utilities (REC required).
24. Transfer of real property administrative control within the Army to another military department or other Federal agency, including the return of public domain lands to the Department of the Interior and reporting or property available for outgranting; and grants of leases, licenses, permits and easements for use of excess or surplus property without significant changes in land use (REC required).

(continued)

Appendix 6-2 (continued)

25. Disposal of uncontaminated buildings and other improvements for removal offsite (REC required).
26. Studies that involve no commitment of resources other than manpower (REC required).
27. Study and test activities within the procurement program for Military Adaptation of Commercial Items for items manufactured in the United States (REC required).
28. Development of table organization and equipment documents, no fixed location or site.
29. Grants of leases, licenses, and permits to use DA property for or by another governmental entity when such permission is predicated upon compliance with NEPA (REC required).

Screening Criteria

1. A CX is a category of actions that do not individually or cumulatively have a significant effect on the human environment and for which, therefore, neither an EA nor an EIS is required.
2. A CX may be used only when the criteria of paragraphs 4-1 and 4-2 of AR 200-2 have been applied and each of the following are true:
 - a. This action is not a major Federal action significantly affecting the quality of the human environment.
 - b. There are minimal or no individual or cumulative effects on the environment as a result of this action.
 - c. There is no environmentally controversial change to existing environmental conditions.
 - d. There are no extraordinary conditions associated with this project.
 - e. This project does not involve the use of unproven technology.
 - f. This project involves no greater scope or size than is normal for this category of action.
 - g. There is no potential of an already poor environment being further degraded.
 - h. This action does not degrade an environment that remains close to its natural condition.
 - i. There are no threatened or endangered species (or critical habitat), significant archeological resources, National Registered or National Register eligible historical sites, or other statutorily protected resources.
 - j. This action will not adversely affect prime or unique agricultural lands, wetlands, coastal zones, wilderness areas, aquifers, floodplains, wild and scenic rivers, or other areas of critical environmental concern.

Appendix 6-3

Noise Zones in Noise Zone Maps

ICUZ Zone	Percent Population Highly Annoyed	A-Weighted Day-Night Sound Level ADNL (dB)	C-Weighted Day-Night Sound Level CDNL (dB)
I	< 15	< 65	< 62
II	15 - 39	65 - 75	62 - 70
III	> 39	> 75	> 70

Appendix 6-4

Calculation of dB Factor to be Added to Helicopter Sound Exposure Levels

Slant Distance (m)	Factor (dB)
0-200	7
200-300	5
300-400	3
400-500	1
500 and longer	0

Appendix 6-5

Definitions of USEPA Class and Compliance Status of Projects

CLASS I

Project Assessment = HIGH

Compliance Status: CMPA, INOV, ESDP

USEPA Class Number 1

Projects required to meet the provisions of assigned compliance agreement or consent order; project required to correct deficiencies found on a USEPA or state inspection; other projects needed to come into compliance when statutory/regulatory deadlines have passed.

CLASS II

Compliance Status: ESDF, PSDF

USEPA Class Number 2

Project needed to meet future compliance deadlines for which planning must have already started.

CLASS III

Compliance Status: ESRO, ESRE, ESDL, OTHR

USEPA Class Number 3

All other projects which, while important, are not related to imminent compliance requirements.

Appendix 6-6

Pollutant Categories for the A-106 Pollution Abatement Plan/RCS 1383 Report

Correlation Between TEAM Guide Sections and A-106/RCS-1383

Appendix 6-7

Activities Eligible for DERA Funding (AR 200-1, para 9-4b)

1. Investigations to identify, confirm and determine the risk to human health and the environment; feasibility studies; remedial action plans and designs; and removal or remedial actions.
2. Research, development, and technology demonstrations necessary to conduct cleanups.
3. Expenses associated with cooperative multi-party cleanup plans and activities.
4. Remedial actions to protect or restore natural resources damaged by contamination from past hazardous waste disposal activities.
5. Cleanup of low level radioactive waste sites which have been identified as IRP sites.
6. Management expenses associated with the IRP, Management expenses are those overhead costs required for the adequate program oversight and management, including indirect costs as defined in the FAR Section 31.203.
7. Operation and maintenance costs for the first 10 yr of operations or remedial systems and monitoring systems.
8. Immediate actions necessary to address health and safety concerns such as providing alternative water supplies or treatment of contaminated drinking water, when the hazard results from a release from DOD property.
9. Studies to locate USTs not used since January 1984, activities to determine whether a release has occurred, and cleanup of contamination.
10. Response to releases from in-service tanks discovered during initial integrity testing per 40 CFR 280 where testing is conducted prior to the regulatory date of 22 December 1993. (Request Components provide support for this alternative and estimate of impact (i.e., additional funding requirements).)
11. CERCLA response actions necessary prior to excess of real property assets, excluding requirements associated with BRAC I or BRAC II installations.
12. CERCLA response actions and RCRA corrective actions approved in FFA/IAGs for NPL sites where DERA is identified as the sole source of funding.
13. CERCLA response or corrective actions at sites identified in the DERPMIS as of 30 September 1990, including RCRA SWMUs and regulated units (treatment, storage and disposal (TSD) units that require permits). Corrective actions and other requirements at TSD units identified after 30 September 1990 must be funded by component appropriations.
14. Corrective actions at solid waste management units required by 3004(u), (v) and 3008(h) of RCRA.
15. Studies and support for RD&D of innovative and cost effective technologies for cleanup of hazardous waste sites, for DOD-unique wastes or other techniques widely applicable to DOD.
16. Support services provided by another agency in accordance with 10 USC 2701(d).

Activities Not Eligible for DERA Funding

1. Closing or capping sanitary landfills unrelated to a hazardous waste cleanup action.
2. RCRA closures at units that have met final construction standards and are associated with permitted and currently operating waste generation and disposal facilities.
3. Construction of hazardous waste storage, transfer, treatment or disposal facilities, except when part of an IRP response action.
4. Testing or repair of active USTs and costs of replacing leaking underground tanks.

(continued)

Appendix 6-7 (continued)

5. Costs of asbestos surveys, containment, removal or disposal, except when incidental to a DERP response action.
6. Cost of spill prevention and containment measures for currently operating equipment and facilities.
7. Cleanup costs of spills covered or required to be covered by spill prevention, control and counter-measure (SPCC) plans.
8. Costs of operation, maintenance or repair to hazardous waste treatment, storage, or disposal facilities which are currently in use (i.e., regulated or permitted), except when part of a DERP response action.
9. Costs of hazardous waste disposal operations, including associated management and operational costs, except when part of a DERP response action.
10. Overseas Environmental Restoration Activities.
11. State support services prior to 17 October 1986, past State costs not reasonably documented. State services in support of nonenvironmental Restoration Program funded cleanup activities or FUDS, unless approved by DASD(E).
12. Contingency response and closure at regulated units which meet standards under 40 CFR 264, and which have been issued a final operating permit under 40 CFR 270.
13. Improvements to meet facility operating standards under 40 CFR 264 standards at regulated units which meet interim standards (40 CFR 265).
14. Fines or other monetary penalties imposed by regulatory agencies.

J. Guidance for Pesticide Management Checklist Users	3

SECTION 7

PESTICIDE MANAGEMENT

A. U.S. Army Regulations (ARs) and Policies

- AR 200-1, *Environmental Protection and Enhancement*. This AR, dated 23 May 1990, prescribes responsibilities, policies, and procedures to preserve, protect, and restore the quality of the environment.
- AR 420-76, *Pest Management*. This AR, dated 3 June 1986, provides policies, standards, and procedures for pest control activities at U.S. Army-controlled facilities. It sets minimum levels of pest management operations in real property maintenance activities (RPMA) and states that these operations are to be compatible with national environmental protection mandates.

B. Department of Defense (DOD) Directives

- DOD Directive (DODD) 4150.7, *Pest Management Program*. This directive, dated 24 October 1983, sets forth the policies, responsibilities, and procedures for pest management programs. This directive establishes the DOD policy of maintaining safe, efficient, environmentally sound, and integrated pest management programs to prevent or control pests that may adversely affect health or damage structures, material, or property. The DOD Plan for the Certification of Pesticide Applicators establishes the policies, criteria, and curriculum for granting certification of personnel.
- DODD 4160.21-M, *Defense Utilization and Disposal Manual*. Chapter 9, *Hazardous Property Management*, sets out guidance for the handling, processing, and disposing of hazardous property in accordance with applicable environmental, safety, and other laws and regulations.

C. Using the TEAM Guide for ECAS

- No additional instructions.

D. Key Army/DOD Compliance Requirements

- Pesticide Management Plan - Installations are required to have a Pesticide Management Plan which addresses all the pesticide application activities on the installation.
- Pesticide Applicators - Installation personnel who apply pesticides are required to be certified under the DOD plan for certification. They must also be participating in a medical surveillance program.
- Highly Toxic Pesticide Storage and Use - Storage facilities for pesticides and excess pesticides classed as highly toxic or moderately toxic that are labeled DANGER, POISON, or with the skull and crossbones symbol, should meet specific structural, operational, and storage requirements. These include pesticides being kept in a dry separate room with fire protection which is not near food or feed, and in containers in good condition with plainly visible labels. There should be decontamination facilities and the local fire department, hospitals, public health officials, and police departments should be notified in writing that the pesticides are being stored.

E. Key Army Compliance Personnel

- The Directorate of Public Works (DPW) will prepare a pest management plan, supervise and direct pest management operations, conduct preventive maintenance and surveillance inspections, ensure that operating personnel are adequately trained, maintain supplies of pesticides and related equipment, and assure that all pest management operations are done safely. In addition, the Facilities Engineer will decide which activities should be contracted out, perform all recordkeeping and reporting requirements of AR 420-76, notify heads of nonappropriated funds activities that restricted and controlled pesticides must be applied by under supervision of certified personnel, and cooperate with medical authorities.
- Preventive Medicine Office will: survey the pest population involved in health of the command and report the results to the facilities engineer; conduct the installation pesticide monitoring program; obtain timely identification and susceptibility of pests to pesticides as necessary and report to the facilities engineer; establish health and personnel safety criteria for pesticide operation; provide certification training; and assist the Major Army Command (MACOM) pest management consultant in conducting an onsite installation pest management program review.
- The Installation Pest Management Coordinator will be a pest management supervisor or professional pest management personnel member, will develop and monitor the installation pest management annual work plan, and will coordinate with activities conducting pest surveillance or applying pesticides to ensure that all applicable information is reported per AR 420-76.

F. Key Army/DOD Compliance Definitions

- None

G. Records To Review in Addition To Those Listed in TEAM Guide

- Installation pest management plan
- Staffing requirements for pest management program

H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide

- Military unit storage/supply areas
- DPW/Department of Logistics (DOL) supply and storage areas
- Field sanitation training sites

I. People To Interview

- Environmental Coordinator (EC)
- Preventive Medicine Officer
- Fire Department
- Building and Grounds Division (DPW)
- Entomology Shop (DPW)
- Staff Judge Advocate (SJA)
- Golf Course Pesticide Shop

Appendix 7-1

Requirements for Installation Pest Management Program

Pest Control Recognized Requirements Manhours*	Minimum No. of Certified Full-Time Pesticide Applicators Required	Installation Pest Management Plan (IPMP)	Onsite Program Review
Less than 0.25	None unless restricted-use pesticides are used or unusually sensitive environmental conditions exist, including endangered species	Individual plan not required; included in supporting installation plan	Requirements established by MACOM PMC
0.25 to 0.49	One	Same as above	Same as above
0.50 to 1.49	One	Individual pest management plans required	Annual or biennial
1.50 to 3.99	Two	Same as above	Same as above
4.00 or more	50 percent of the pest management workforce	Same as above	Same as above

* Multiply the total productive man-years required for the pest management program by a factor of 1.19 to determine the recognized requirement. This factor includes essential time allowance for annual and sick leave, on-the-job training, formal training, mandatory attendance at lectures on safety, security, and fire prevention, and required medical examination.

SECTION 8

PETROLEUM, OIL, AND LUBRICANT (POL) MANAGEMENT

A. U.S. Army Regulations (ARs) and Policies

- AR 200-1, *Environmental Protection and Enhancement*. Chapter 8 of AR 200-1, dated 23 May 1990, addresses the Oil and Hazardous Substances Pollution Contingency (OHSPC) Plan. It prescribes the policy and procedure for prevention and control of spills of oil and hazardous substances, and sets out guidance in accordance with regulations implemented by the *Clean Water Act* (CWA).

B. Department of Defense (DOD) Directives and Instructions

- DOD Directive (DODD) 5030.41, *Oil and Hazardous Substances Pollution Prevention and Contingency Program*. This directive, dated 26 September 1978, addresses requirements for compliance with the National OHSPC Plan.

C. Using the TEAM Guide for ECAS

- No additional instructions.

D. Key Army/DOD Compliance Requirements

- Spill Prevention, Control, and Countermeasures (SPCC) Plan - Installations which fall under the following limits are required to develop a SPCC Plan:
 1. has the potential to spill oil or hazardous substance in a quantity that would be harmful to human health or welfare or to the environment
 2. meets at least one of the following criteria:
 - a. aggregate aboveground oil storage on the installation is greater than 5003 L (1320 gal)
 - b. any single aboveground oil storage tank on the installation exceed 2501 L (660 gal)
 - c. total underground oil storage on the installation is greater than 159,180 L (42,000 gal)
 3. one or more hazardous substance is stored in quantities that would be harmful to human health or welfare, or to the environment if a spill were to occur.

Army installations are required to review the SPCC Plan every 2 yr or when there is a change in facility design, construction, operation, or maintenance that affects the potential for spills of oils or hazardous substances (AR 200-1, para 8-4).

- Spills - Any spill of petroleum products must be reported to the Installation On-Scene Coordinator (IOSC) immediately (AR 200-1, para 8-3(a)).

E. Key Compliance Personnel

- The Directorate of Public Works (DPW) is responsible for monitoring wastewater discharge and stream water quality at selected locations around the installation. This responsibility may also fall to the Directorate of Environmental Quality (DEQ).

- The Spill Response Team (SRT) is tasked to respond to spills when requested by an On-Scene Coordinator (OSC) and to perform spill containment, recovery, cleanup, disposal and restoration activities as directed by the OSC. The SRT is a multidisciplinary team often including the following persons: Facilities Engineer, Environmental Coordinator, Director of Safety and Health, Fire Chief, Military Police, Public Affairs Officer (PAO), Safety Officer, and Staff Judge Advocate.
- The Fire Department provides support in emergency response, spill events, exercises, and fire protection activities. In addition, the department will be responsible to make periodic fire safety inspections of flammable/combustible storage and handling areas, hazardous waste storage areas, and accumulation points on the installation.
- The Safety Officer is responsible for conducting workplace safety evaluations and inspections of the handling and storage of hazardous materials and waste. The Safety Officer will provide the appropriate manager with a report of their findings and recommended corrective actions. The Safety Officer is also responsible for ensuring the prompt and accurate investigation of any hazardous material mishaps that result in injury or property damage.
- Fuels Management Officer of DPW is responsible for the safe and efficient receipt, storage, handling, issuing, and accounting of all petroleum products to include all general operations and inspections.
- DPW is responsible for the maintenance of all installed petroleum storage and dispensing systems. This responsibility often is discharged by the Liquid Fuels Maintenance (LFM) shop. The DPW also is responsible for the calibration of permanently installed meters.

F. Key Army/DOD Compliance Definitions

- None

G. Records To Inspect in Addition To Those Listed in TEAM Guide

- Oil transfer manual

H. Physical Features To Examine in Addition To Those Listed in TEAM Guide

- Oil storage at Army/Air Force Exchange Service (AAFES) operations

I. People To Interview

- Directorate of Public Works (DPW)
- Environmental Coordinator (EC)
- Fire Department
- Director of Logistics (DOL)
- Chief of Operations and Maintenance (O&M)
- Maintenance Officers (Company, Battalion, Brigade Site Units)
- Fuels Management Officer (DOL/DPW)
- Building and Grounds Division (DPW)

- TSDF Operators (DPW, DOL, DRMO)
- Safety
- Spill Response Team
- DRMO Personnel

SECTION 9

SOLID WASTE MANAGEMENT

A. U.S. Army Regulations (ARs) and Policies

- AR 40-5, *Preventive Medicine*. This AR, dated 15 October 1990, establishes practical measures for the preservation and promotion of health and the prevention of disease and injury. The Department of the Army (DA) objective is to manage Army solid waste to ensure compliance with appropriate Federal, state, and DA regulations in a manner that permits maximum opportunity for resource recovery without jeopardizing natural resources or health and the environment.
- AR 200-1, *Environmental Protection and Enhancement*. Chapter 6, *Solid Waste and Hazardous Waste Management Program*, dated 23 May 1990, defines Army policy and responsibility for managing solid waste, including resource recovery, recycling, waste reduction, and training programs. It mandates compliance with local, state, and Federal solid waste requirements, to assure waste management practices the protection of human health and the environment, to reduce the need for corrective action, and minimize waste generation and disposal.
- AR 215-2, *Administration of Morale, Welfare and Recreation (MWR) Activities and Nonappropriated Funds Instrumentalities (MAFIs)*. This AR, dated 10 October 1990, contains guidance for the involvement of MAFI activities in the recycling program.
- AR 420-47, *Solid and Hazardous Waste Management*. This AR, dated 1 January 1985, remains in force with the exception of Chapters 5 and 6, Appendices A, B, and C, and the glossary, which have been superseded by AR 200-1. The remaining chapters cover responsibilities regarding solid and hazardous waste, collection and storage of both solid and hazardous waste, thermal processing and land disposal of solid (nonhazardous) waste, and monitoring records.

B. Department of Defense (DOD) Directives and Instructions

- DOD Directive (DODD) 4165.60, *Solid Waste Collection, Disposal, Material Recovery, and Recycling*. This directive, dated 4 October 1976, provides guidance and direction to all DOD facilities relative to solid waste collection, disposal, material recovery, and recycling in agreement with the *Solid Waste Disposal Act* (SWDA).

C. Using the TEAM Guide for ECAS

- No additional instructions.

D. Key Army/DOD Compliance Requirements

- Recycling - Army installations are required to participate in any state or local recycling programs and to reduce the volume of solid waste materials at the source whenever practical (DOD 4165.60, para V(a), V(c), and V(h), and AR 200-1, para 6-14a).

- Solid Waste Storage - All solid waste is required to be stored such that:
 1. it is not a fire, health, or safety hazard
 2. it does not provide food or harborage for disease vectors
 3. it is contained or bundled to prevent spills.

Additionally, food waste containers are required to be marked UNAUTHORIZED PERSONNEL ARE NOT TO ENTER DUMPSTER FOR ANY REASON (AR 420-47, para 3-4b).

E. Key Compliance Personnel

- The Directorate of Public Works (DPW) is responsible for site location, licensing, construction, and operation of onsite landfills, and for the storage and transportation of solid wastes to either onsite or offsite disposal activities operated by the installation.
- The Installation Commander (IC) designates an activity (normally either DPW or an MWR activity) as the qualifying waste recycling program (QWRP) manager. The QWRP manager is responsible for proper operation of the program.

F. Key Army/DOD Compliance Definitions

- None.

G. Records To Review in Addition To Those Listed in TEAM Guide

- Installation solid waste management plans, Standard Operating Procedures (SOPs)

H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide

- Waste receptacles (dining facilities, hospitals, labs, motor pools, industrial areas)
- Defense Reutilization and Marketing Office (DRMO) facilities

I. People To Interview

- Directorate of Public Works (DPW)
- Environmental Coordinator (EC)
- Preventive Medicine Officer
- Chief of Operations and Maintenance (O&M)
- Director of Contracting (DOC)
- Public Affairs Office (PAO)
- Chief of Directorate of Personnel and Community Activities (DPCA)
- Defense and Reutilization Marketing Office (DRMO)
- Morale, Welfare, and Recreation (MWR)
- Disposal Facility Operator
- Recycling Coordinator

I. People To Interview	2
J. Guidance for Storage Tank Management Checklist Users	3

SECTION 10

STORAGE TANK MANAGEMENT

A. U.S. Army Regulations (ARs) and Policies

- AR 200-1, *Environmental Protection and Enhancement*. This AR, dated 23 May 1990, requires compliance with the most stringent Federal, state, local, host nation, and Army requirements for underground storage tanks (USTs) and aboveground storage tanks (ASTs). It further lifts the categorical exclusion granted to heating oil USTs under Subtitle I of the *Resource Conservation and Recovery Act* (RCRA). Chapter 5, paragraph 7, outlines the basic Army UST requirements to follow in the absence of more stringent regulations.

B. Department of Defense (DOD) Directives and Instructions

- All applicable directives and instructions have previously been implemented by ARs.

C. Using the TEAM Guide for ECAS

The following forms are used by the Army to document compliance as required in 40 CFR 280.43(a) (TEAM Guide checklist item ST.65.1):

- DA Form 3853-1, *Innage Gauge Sheet*.
- DA Form 5831-R, *Petroleum Product Inventory Control Sheet*.
- DA Form 3643, *Daily Issues of Petroleum Products*.
- DA Form 3644, *Monthly Abstract of Issues of Petroleum Products and Operating Supplies*.
- DA Form 4702-R, *Monthly Bulk Petroleum Accounting Summary*.

D. Key Army/DOD Compliance Requirements

- Heating Oil USTs - USTs used for storing heating oil for consumptive use on the premises where stored must comply with 40 CFR 280 (AR 200-1, para 5-7).
- New and Replacement USTs - All new and replacement USTs are required to be of doublewall construction with interstitial monitoring.
- Hazardous Waste USTs - USTs will not be used for the storage of hazardous waste (AR 200-1, para 5-7c(3)).
- Abandoned and Out-of-Service USTs - USTs that are permanently taken out of service and abandoned USTs are required to be removed from the ground (AR 200-1, para 5-7c(4)).

E. Key Compliance Personnel

- The Safety Officer is responsible for conducting work place safety evaluations and inspections of the handling and storage of hazardous materials and waste. The Safety Officer will provide the ap-

appropriate manager with a report of the findings and recommended corrective actions. The Safety Officer is also responsible for ensuring the prompt and accurate investigation of any hazardous material mishaps that result in injury or property damage.

- The Fuels Management Officer of the DPW is responsible for the safe and efficient receipt, storage, handling, issuing, and accounting of all petroleum products to include all general operations and inspections.
- The DPW is responsible for the maintenance of all installed petroleum storage and dispensing systems. This responsibility often is discharged by the Liquid Fuels Maintenance (LFM) shop. The DPW also is responsible for the calibration of permanently installed meters.
- The EC monitors all POL activities that may affect the environment and usually is responsible for the coordination of the review and updates of the ISCP Plan. The EC also often coordinates the reportable spills notification of appropriate Federal and state agencies on behalf of the Installation On-Scene Commander (IOSC).

F. Key Army/DOD Compliance Definitions

- Although the USEPA excludes tanks used for storing heating oil for consumptive use on the premises where stored, the U.S. Army does not (AR 200-1).

G. Records To Review in Addition to Those Listed in TEAM Guide

- UST replacement program
- UST Management Plan

H. Physical Features To Inspect in Addition to Those Listed in TEAM Guide

- Rapid Refueling Points
- Fuel Bladders
- Heating oil USTs

I. People To Interview

- Directorate of Public Works (DPW)
- Environmental Coordinator (EC)
- Safety and Health Officer
- Fire Department
- Director of Logistics (DOL)
- Chief of Operations and Maintenance (O&M)
- Spill Response Team (SRT)
- Fuels Management Officer

C. Using the TEAM Guide for ECAS	1
D. Key Army/DOD Compliance Requirements	1
E. Key Compliance Personnel	3
F. Key Army/DOD Compliance Definitions	3
G. Records To Review in Addition To Those Listed in TEAM Guide	4
H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide	4
I. People To Interview	4
J. Guidance for Toxic Substances Management Checklist Users	5

SECTION 11

TOXIC SUBSTANCES MANAGEMENT

A. U.S. Army Regulations (ARs) and Policies

PCBs

- AR 200-1, *Environmental Protection and Enhancement*. Chapter 5, para 6, *Polychlorinated Biphenyls (PCBs)*, mandates Army compliance with the *Toxic Substances Control Act (TSCA)* and other applicable Federal statutes. It also outlines a recordkeeping system for PCBs and PCB-related Items.

Asbestos

- AR 200-1, *Environmental Protection and Enhancement*. Chapter 10, *Asbestos Management Program*, prescribes policy and procedures for managing asbestos and asbestos-containing material (ACM) and wastes. It requires compliance with all applicable Federal, state, and local regulations relative to asbestos management.

Radon

- AR 200-1, *Environmental Protection and Enhancement*. Chapter 11, *Army Radon Reduction Program (ARRP)*, describes policy and procedures for assessing indoor levels of radon and mitigating radon in structures where the levels are elevated. The program is decentralized; that is, each installation is responsible for funding, executing, documenting, and managing the radon monitoring and mitigation efforts based on ARRP.

B. Department of Defense (DOD) Directives and Instructions

- All applicable directives and instructions have previously been implemented by ARs.

C. Using the TEAM Guide for ECAS

- No additional instructions.

D. Key Army/DOD Compliance Requirements

- Asbestos Survey - Installations are required to have conducted a survey of all their structures.
- Asbestos Management Plan - The installation must prepare an Asbestos Management Plan that includes the following:
 1. a complete list of operations and maintenance schedules, design plans, and specifications that identify structures scheduled for repair, alteration, or demolition
 2. an installation-wide survey of all structures to determine the location, extent, and condition of all asbestos

3. documentation of the presence, extent, and condition of asbestos and assessment criteria
 4. an assessment for each occurrence of asbestos as to the potential for environmental release and risks to human health and the environment that was done by personnel meeting the management planner training requirements of the *Asbestos Hazard Emergency Response Act* (AHERA) and other applicable Federal, state, and local requirements
 5. preparation, coordination, and immediate implementation of abatement plans to minimize potential for asbestos exposure for each area where it exists
 6. preparation, coordination and immediate implementation of a special Operations and Maintenance (O&M) plan for each occurrence of asbestos to monitor the condition of asbestos and minimize releases and human exposure
 7. provision for worker education/training programs
 8. an environmental impact analysis of the Installation Asbestos Management Plan (as required by AR 200-2).
- Radon - ARRP applies to all major Army installations. The program is designed to assess radon levels on a priority basis using the following priority list: in family housing, administrative buildings (offices), dormitories, childcare facilities, temporary lodging facilities, etc. Detailed assessments will be accomplished at the installations where initial screening results identify a radon problem. Following mitigation, post mitigation assessments are conducted to ensure the effectiveness of the mitigation actions. Mitigation actions are prioritized using the table below:
 1. Priority 1: Daycare centers, hospitals, schools, and living areas (that is, quarters, unaccompanied personnel housing, and billets).
 2. Priority 2: Areas having 24-h operations, such as operations centers and training and research, development, test, and evaluating facilities.
 3. Priority 3: All other routinely occupied structures.

MITIGATION TIME FRAME
(AR 200-1, Chapter 11-3, Table 11-1)

Radon Level (pCi/L)	Mitigate:
Greater than 200 ¹	1 mo or move the occupants
200-20 ¹	6 mo
<20 - 8 ²	1-4 yr ³
<8 - >4 ²	5 yr
4 or less ¹	No action required

¹ Determine by 90-day screen or a 1-yr measurement in the case of Priority 2 and 3 structures.

² Annual average determined by 1-yr measurement. Screening measurements in this range will not be used as the basis for initiating mitigation actions.

³ Depending on the level of the measurement.

E. Key Compliance Personnel

PCBs

- The Directorate of Public Works (DPW), through the Exterior Electrical Shop, or the Environmental Coordinator (EC) is responsible for identifying, inspecting, marking (labeling), and properly servicing PCB Electrical Equipment (Transformers and Capacitors). Additionally the DPW will help develop and maintain the PCB Management Plan or standing operating procedure (SOP) and the installation's inventory of PCB equipment.
- The EC is responsible for ensuring that out-of-service items are located in a licensed and technically adequate PCB storage facility. Normally, such facilities are located at a Defense Reutilization and Marketing Office (DRMO) and the DRMO is responsible for storage, disposal transportation, and disposal contracts. Additionally, the EC will help develop and maintain the PCB Management Plan or SOP and the installation's inventory of PCB equipment.

Asbestos

- DPW establishes an installation asbestos management team and appoints an asbestos management control officer or team leader. The DPW will also maintain records of asbestos survey results and plans and updates the records as changes occur. DPW will maintain records for 30 yr after the last incidence of employee exposure to asbestos.
- Asbestos Management Team prepares the Asbestos Management Plan which contains documentation on all asbestos management efforts and the mechanism for oversight of the program. The team, as a minimum, consists of representatives from DPW, Environmental Office, Preventive Medicine, Safety Office, Civilian Personnel Office (CPO), Staff Judge Advocate (SJA), and Public Affairs Office (PAO).

Radon

- DPW is responsible for review of radon assessments and implementation of radon mitigation activities in accordance with ARRP.

F. Key Army/DOD Compliance Definitions

- *Army Radon Reduction Program (ARRP)* - a program whose objectives include the identification of structures owned and leased by the Army (continental United States (CONUS) and outside the continental United States (OCONUS)) that have indoor radon levels greater than 4 pCi/L of air and the modifications of those buildings found with excess levels of radon (AR 200-1, Chapter 11).
- *Facility* - buildings, structures, public works, equipment, aircraft, vessels, and other vehicles and property under control of, or constructed or manufactured for leasing to the Army (AR 200-1, Glossary, Section 2).
- *Industrial Installation* - an installation that has the primary mission of producing, maintaining, or rehabilitating military material (AR 200-1, Glossary, Section 2).

- *Lowest Living Area (LLA)* - is defined as follows (AR 200-1, para 11-5a):
 1. for structures without subsurface areas, the LLA is the ground floor
 2. for structures with subsurface areas, the LLA is defined as the lowest area in that structure that has a finished, hard surface floor (for example, concrete or tiled) that is or could be used. A dirt breezeway is not an LLA, but an unfinished basement with a concrete floor is, regardless of what the current occupants are using the area for.
- *Radon-222* - a naturally occurring, inert, radioactive gas that is formed from the radioactive decay of uranium (AR 200-1, para 11-3).

G. Records To Review in Addition To Those Listed in TEAM Guide

- Radon testing results
- Radon mitigation plans
- Radon annual reports

H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide

- None

I. People To Interview

- Directorate of Public Works (DPW)
- Environmental Coordinator (EC)
- Safety and Health Officer
- Fire Department
- Chief of Operations and Maintenance (O&M)
- Defense and Reutilization Marketing Office (DRMO)
- Utilities Division (Exterior Electric Shop)
- Preventive Medicine Personnel

SECTION 12

WASTEWATER MANAGEMENT

A. U.S. Army Regulations (ARs) and Policies

- AR 200-1, *Environmental Protection and Enhancement*. This AR, dated 23 May 1990, directs all Army facilities to comply with the provisions of the *Clean Water Act* (CWA). The Water Resources Management Program requires the Army to conserve all water resources, control or eliminate all sources of pollutants, cooperate with Federal, state, regional, and local authorities in forming and carrying out water pollution control plans, control runoff and erosion, and consider nonpoint source abatement in all construction, operation, and land management activities. The paragraph on the CWA (para 3-3) provides specific instructions for meeting compliance requirements. It covers discharge permits under the National Pollutant Discharge Elimination System (NPDES), site inspections, connection to municipal/regional wastewater systems, pretreatment standards, investigation of complaints, and notification procedures.
- AR 420-46, *Water and Sewage*. This AR, dated 1 May 1992, establishes policies and procedures governing facilities that supply water and dispose of sewage and industrial waste.

B. Department of Defense (DOD) Directives and Instructions

- All applicable directives and instructions have previously been implemented by ARs.

C. Using the TEAM Guide for ECAS

- No additional instructions.

D. Key Army/DOD Compliance Requirements

- Discharge Complaints - Each installation is required to have a system for investigating water pollution complaints and allegations from individuals and water pollution control authorities (AR 200-1, para 3-3g).
- Noncompliance Reporting - Noncompliance with NPDES and State Pollutant Discharge Elimination System (SPDES) permits must be reported to U.S. Army Environmental Center (USAEC) through command channels.
- Treatment Plant Operators - Personnel engaged or employed in operation and maintenance of water pollution control facilities are required to be trained and undergo periodic refresher training (AR 200-1, para 3-6).

E. Key Compliance Personnel

- The Directorate of Public Works (DPW) is responsible for monitoring wastewater discharge and stream water quality at selected locations around the installation. This responsibility may also fall to the Directorate of Environmental Quality (DEQ).

F. Key Army/DOD Compliance Definitions

- None

G. Records To Review in Addition To Those Listed in TEAM Guide

- Facility response plans required by the *Oil Pollution Act*

H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide

- None

I. People To Interview

- Directorate of Public Works (DPW)
- Environmental Coordinator (EC)
- Preventive Medicine Officer
- Fire Department
- Director of Logistics (DOL)
- Chief of Operations and Maintenance (O&M)
- Engineering, Plans, and Services (EP&S)
- Wastewater Treatment Plant Supervisor (O&M)
- Public Affairs Office (PAO)
- Staff Judge Advocate
- Central Vehicle Wash Facility Operating Supervisor
- Maintenance Officers (Company, Battalion, Brigade Site Units)
- Fuels Management Officer (DOL/DPW)
- Building and Grounds Division (DPW)
- Entomology Shop (DPW)
- TSDF Operators (DPW, DOL, DRMO)
- Safety
- Spill Response Team
- DRMO Personnel

SECTION 13

WATER QUALITY MANAGEMENT

A. U.S. Army Regulations (ARs) and Policies

- AR 420-46, *Water Supply and Wastewater*. This AR, dated 1 May 1992, establishes policies and procedures governing installations that supply water and dispose of sewage and industrial wastes. It applies to all Department of the Army (DA) installations. In general, it addresses the following facilities engineering activities: the furnishing of sewage services; operations of water and sewage pumping and treatment plants; the maintenance, repair, and alteration of facilities and appurtenances required for the production, pumping, treatment, and distribution of water; and the collection and disposal of sewage and industrial waste.

B. Department of Defense (DOD) Directives and Instructions

- All applicable directives and instructions have previously been implemented by ARs.

C. Using the TEAM Guide for ECAS

- No additional instructions.

D. Key Army/DOD Compliance Requirements

- Recordkeeping - The Directorate of Public Works (DPW) must keep records of actions taken to correct or repair any part of the distribution system. The installation is also required to prepare and keep current water supply distribution system, sectional, and valve-location maps (AR 420-46, para 5c and para 11-1).
- Emergency Notifications - Installations are required to have a standing operating procedure (SOP) for alerting personnel in national or local emergencies or times of actual or anticipated noncompliance (AR 420-46, para 5d).
- Swimming Pools - Installation personnel are responsible for maintaining appropriate pH, chlorine residuals, coliform levels, and testing (AR 420-46).

E. Key Compliance Personnel

- Preventive Medicine Office (PMO) is responsible for coordinating with the DPW to review and interpret drinking water sampling procedures and analyses for health implications, act as a liaison with state regulatory authorities when maximum contaminant levels (MCLs) are exceeded, and perform sanitary surveys or inspections of water treatment facilities as necessary.
- DPW designs, constructs, and operates the water distribution system to provide sufficient drinking water to installation personnel. The DPW is responsible for providing adequate water treatment to assure drinking water does not exceed the maximum contaminant levels established for human consumption. Training of operating personnel to meet proficiency levels consistent with the operator

certification requirements that apply to their location is also the responsibility of the DPW. It also maintains an up-to-date map of the complete potable water system, makes repairs, and maintains the system. The DPW is also responsible for negotiating and maintaining the installation's water supply contract.

F. Key Army/DOD Compliance Definitions

- None

G. Records To Review in Addition To Those Listed in TEAM Guide

- Swimming pool treatment records

H. Physical Features To Inspect in Addition To Those Listed in TEAM Guide

- Swimming pools

I. People To Interview

- Directorate of Public Works (DPW)
- Environmental Coordinator (EC)
- Preventive Medicine Officer
- Chief of Operations and Maintenance (O&M)
